Observer: Kazuhiro Suzuki
HARO (Radio Meteor Observation using HAM)
Location: Toyokawa Meteor Observatory (137.32 deg E, 34.81 deg N)
Shiinoki, Toyokawa-city, Aichi, 442, JAPAN
```

Transmitter: JA9BOH 53.7500 MHz, CW 50 W
Antenna: Dipole (height 7 m, to zenith)
Receiver: IC-575 (ICOM) LSB BW 2.5 kHz
Transmitter location: Sabae (in Fukui pref.), about 150 km
north north-west from receiving station.
Method of echo sampling: After image procedure was done by PC with FFT
software, echoes(>10 dB(S/N)) were counted.

Total echo rates:

Notes:

- @nn =corrected hourly rates (observed for less than 60 min).

- local time = JST = UT + 9 hours.

Kazuhiro Suzuki

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz).
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2 element Yagi with 4 dBd gain to SW, azimuth: 45 o (SW)
Data sampling system: threshold triggering, sampling rate 64 ms.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.
Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft43.zip (new version!)

Try 137.5MHz and 137.620MHz. The wxsats "broadcast" in FM and the
bw is about 50KHz. A NFM scanner will allow to listen, but not
to receive and display an image. When a wxsat is at a higher elevation
you can hear them on a handheld scanner with the rubber duckie antenna.
Serious recpetion is a bit tougher.

144.5 may be the lowest repeater input frequency according to a band
plan, but
as long as they are not causing harmful interference, there is no LEAGAL
requirement why they can't use 144.300 as a repeater input.

Source record: 21610
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.space

The full spec's for the FT-736 can be found at;

http://www.yaesu.com/736spec.html

It seems Yaesu has changed the spec to state input power, not output power anymore. When I was looking at it a few years back all bands were 25W out except 1.2Ghz, which was 10W. Now you don't know what you'll get. Way too expensive for me and not know what you're getting!

Darwin Teague wrote:

> Could you please tell me how to receive the video? Is it a TV-UHF frequency? I
> have an old Rabbit receiver, but don't know what frequency it's on....

You can receive ATV the following ways:

Using an ATV down converter (converts 439.25 to TV channel 3) and a
70cm Beam Antenna

Using an old TV or VCR with manual tuning hooked up to an outside
antenna.
You will have to tune the TV to UHF channel 14 and then try using
your
fine tuning control and tune DOWN. The ATV frequency is BELOW
UHF ch 14.

Using a newer TV or VCR that is cable-ready. Hook the TV or VCR up
to an
outside antenna and then set it for CABLE CHANNEL 60.

The first method is BY FAR the best. Down converters are around $80 and
you can
make your own beam (I did). Make sure your receiving antenna has the
same
polarity as the transmitter. Cross polorization loss on 70cm can be as
much
as 20db.

Notes:

. local time = UT + 2 hours.
. % direct reception
. ? high count to be checked for potential sporadic E.

Maurice De Meyere

Observer: Werfried Kuneth
Location: Villach, Austria (13 53' E, 46 37' N)
Antenna: dipole with reflector
Receiver: AR-8000 at 59.2505 MHz, SSB mode,
Narrow passband filter, no preamplifier.
Transmitter: 150 kW TV video carrier in Bucaresti,
Romania, distance 950 km, east direction.
Observing method: the audio signal is fed into a real time FFT display (FFTDSP38 program from AF9Y) on the PC where 640 channels of 2 Hz width are recorded and stored continuously. The sensitivity of each 2 Hz wide channel is about -171 dBm. Every meteor reflection (in SSB mode) produces a distinct whistle, which is recorded easily by the real time FFT program and saved in .GIF pictures of 200 seconds each.
From the 1280 Hz wide received picture only one channel of 40 Hz width is used for meteor identification, the other nearby "channels" are used to monitor interference, which can be identified easily this way. If any interference occurs, the whole 200 second recording of one picture is not used for further processing.

The following figures show the total length of the meteor reflections during one hour,expressed as percentage. The number here shows 10 times this value. (e.g. 100 means 10 percent).

| Aug 1996

Notes:
. blank value means either no data available, interference,
sporadic "E", power failure, shutdown during thunderstorms or
transmitter shutdown.
. local time conversion: 2 hours ahead of UT (06h00 UT is 08h00 local).

. maximum Perseid activity during the early hours (UT) of Aug 12.

. *** Radio Meteor Gallery is open ***
I'd like to invite you all to my new Radio Meteor Gallery,
with the best spectrograph pictures out of about one million
recorded meteor reflections during last year. URL is
<http://www.net4you.co.at/user/kuneth/gallery.html>

Werfried Kuneth

Observer: Kimio Maegawa
Transmitter: 50 W CW 53.7500 MHz
Transmitter antenna: 2 element Cross Yagi 4dBi, zenith
Transmitting Location: Sabae city (136 11' E, 35 56' N)
Receiver: IC726 500 Hz BW , sensitivity -154 dBm min
Receiver antenna: 3el Yagi 7 dBi (70 deg, SE direction) height 10 m
Receiving Location: Ohno city (136 53' E, 36 00' N)
Data processing : Receiver output is fed into DX2-66 MHz PC and analyzed by
AF9Y's FFTDSP42 software.
Then stored every 4.22 min automaticaly with GIF format.
Play back GIF files and count echoes manually by the doppler
shift rejecting tropo signal or airplane echo.

Long duration echoes (t>2 sec):

UT | 8/ 9 9/10 10/11 11/12 12/13 13/14
| August 1996
```

Notes:
. local time = JST = UTC + 9 hours
. the radiant was not located favorably when the Perseids maximum occurred: yet a significant relative increase (with respect to the adjacent days) is seen between 0h-2h UT on August 12.

Kimio Maegawa

Observer: Ton Schoenmaker
Location: Roden, Netherlands (6 degr 26' E, 53 degr 08' N)
Frequency: 66.89 MHz
Transmitter location:
Krakow, Poland, 120 kW, distance 980 km
Antenna: Horizontal Yagi, 5 elements, geographical azimuth 110 degrees (ESE), elevation 15 degrees
Receiver: Homemade convertor 65-67 MHz to 28-30 MHz + Barlow-Wadley 0-30 MHz receiver; total sensitivity 0.3 uV for 20 dB S/N with a bandwidth of 3 kHz
Observing method: Brown strip chart recorder, 9 or 18 inch/hour + occasional listening.

Dead time corrected counts of reflections during one hour intervals starting at:

Kazuhiro Suzuki

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz).
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2 element Yagi with 4 dBd gain to SW, azimuth: 45 o (SW)
Data sampling system: threshold triggering, sampling rate 64 ms.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.
Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft43.zip (new version!)

1743. RCS 2200 -- Camus mode radios -- where to get them?

Newsgroup: rec.radio.amateur.space
Date: 1996-09-09 00:00:00 UTC
From: ljubisic@EUnet.yu
Message-ID: <5127dk$b36@Solair3.EUnet.yu>
Source record: 21525

Hi!

I am having a little problem. I have to expand our company's radio system, and I have to purchase radios with DTMF keypad (we have also radio-phone system), but they have to be RCS 2200 - Camus mode compliant. We are using Motorola MX3000 (Stornophone7000) devices at the moment, but due to it's price and quantity we would like to buy, we are seeking for some cheaper solution. (By the way, I heard something about some new software for MX3000. Anybody has it? What are new features, if any?)

So, I was told that Alinco's DJ-130 model is Camus compatible, but local dealer couldn't confirm it. Also, I heard that DJ-182 with its Al-trunk logic board (which operates with CTCSS) could be MODIEFIED to be Camus mode compatible. Is there anybody from Alinco who could tell me if this is possible, and how?

Also, one friend told me that ICOM-H16T (#17), with Logic-A-Unit (EP701, PCB B1580H) is Camus mode compatible, and he wasn't sure, but also told me that ICOM IC-F30LT with UT-96 5 tone unit is also Camus capable. But, same thing as with Alinco, local delares couldn't confirm or deny it. Anybody knows it? Is there any e-mail contact in Icom where I could check it?

And finaly, it doesn't have to be Alinco or Icom, it could be also Yaesu, Kenwood, Standard, Harris... but I have to know is it Camus mode compatible, and how to order such option or modification from manufactorer/dealer.

If anybody knows something about it, I would like to ask him to send me a note _by mail_, since I wouldn't like to miss such importnat message by skiping it somehow in newsgroup.

Thanx for understanding!

1744. NORAD Two-Line Orbital Element Sets (TLE862)

Newsgroup: rec.radio.amateur.space
Date: 1996-09-09 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5126ok$s2@blackbird.afit.af.mil>
Source record: 21526

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

1745. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-09-09 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5126sh$sf@blackbird.afit.af.mil>
Source record: 21527

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Subject: 'modes.dat' for 'SatTrack'

In <322252A2.167E@alive.com> Tovar <tvr@alive.com> writes:

>Can someone suggest where/how i can get a current version of 'modes.dat'
>(which contains frequencies and modes of operation), including, for
>example, JAS-2? It seems like a real waste to get the whole SatTrack
>package just to get that one file. Or, did i miss something and there's
>some easy way of getting that?

You can just edit it yourself, using a text editor.

Try 137.5MHz and 137.620MHz. The wxsats "broadcast" in FM and the
bw is about 50KHz. A NFM scanner will allow to listen, but not
to receive and display an image. When a wxsat is at a higher elevation
you can hear them on a handheld scanner with the rubber duckie antenna.
Serious recpetion is a bit tougher.

From: kenn2sqw@aol.com (Ken N2SQW)
Subject: Help: re pacsats

I've been involved with the analog sats for over a year now, and am
thinking of trying the digital birds next. What suggestions do you have
regarding a relatively inexpensive way to get on the pacsats? I'm using a
Yaesu FT736R transceiver for the sats. I have a typical terrestrial packet
setup, so I'm familiar with packet from that point of view.
Thanks, and 73, Ken

Please reply either here, or preferably, via E-Mail.
My E-Mail address is: KenN2SQW @ AOL.COM

Could you please tell me how to receive the video? Is it a TV-UHF frequency? I have an old Rabbit receiver, but don't know what frequency it's on....

Hello, Stephen:

Take a look at my Home Page at:

http://www.trucom.com/ppages/marty

I have a Ham Radio and Amateur Astronomy area where the Astronomy area
focuses on Amateur Radio Astronomy.

Take Care & 73

Subject: WTB: Low Output or Dead High Power Transmitting Tubes

I want to buy dead power transmitting tubes. Tubes must not be broken or
physically damaged. I'm interested in tubes with power dissapations 250 watts
to 10,000 watts. Let me know what you have and I'll give you a quote.

1748. JAS-2 Digitalker?

Newsgroup: rec.radio.amateur.space
Date: 1996-09-09 00:00:00 UTC
From: boyer@rd.bbc.co.uk
Message-ID: <510ool$2vr@bbcnews.rd.bbc.co.uk>
Source record: 21613

Has anyone haerd the jas-2 digitalker? It's supposed to be on 435.91MHz
and be receiveable witha handie, but despite listening at the appropiate
time I have heard nothing.

J.

1749. Re: How does THIS sound for EME?

David,
Here is the real deal :-)
1. a 9ft dish is WAY too SMALL for 435 MHZ !
I can not tell you what the gain is right now but forget the 9ft dish
unless you go way higher in frequency like 2.4 gig or so
on 440 MHZ you need to look at stacking some yagi's
to get up around 24 dbd gain on the antennas

2. Going with 9913 was a good idea BUT
at 100 ft you are sill loosing 3 db or so.
50 watts into the coax 25 watts out to the antenna..
you need shorter and better hardline if you are going to be 100' from
your antenna system.. all of them db losses really add up quick !

3 Forget FM
and nope your 25 watts to a dipole element into a 9' dish
might get ya to a local repeater or two !
...for starters Get a GOOD 2M all mode radio
...get a 10 Meter receiver
play around with working on the RS-10 Satellite
then work your station up from there.

4. If you really want to work eme then you will need at least
24 DBD antenna gain on each end and close to legal max power
anything less than that
then some of the BIG guns might be able to hear ya

5. Someone else might have a good book they might point you too.

I'm Still dreaming myself

Good Luck

1750. RCS 2000 -- Camus mode radios -- where to get them?

Newsgroup: rec.radio.amateur.space
Date: 1996-09-09 00:00:00 UTC
From: ljubisic@EUnet.yu
Message-ID: <511jrs$5gs@Solair3.EUnet.yu>
Source record: 21615

Hi!

I am having a little problem. I have to expand our company's radio system, and I have to purchase radios with DTMF keypad (we have also radio-phone system), but they have to be RCS 2000 - Camus mode compliant. We are using Motorola MX3000 (Stornophone7000) devices at the moment, but due to it's price and quantity we would like to buy, we are seeking for some cheaper solution. (By the way, I heard something about some new software for MX3000. Anybody has it? What are new features, if any?)

So, I was told that Alinco's DJ-130 model is Camus compatible, but local dealer couldn't confirm it. Also, I heard that DJ-182 with its Al-trunk logic board (which operates with CTCSS) could be MODIEFIED to be Camus mode compatible. Is there anybody from Alinco who could tell me if this is possible, and how?

Also, one friend told me that ICOM-H16T (#17), with Logic-A-Unit (EP701, PCB B1580H) is Camus mode compatible, and he wasn't sure, but also told me that ICOM IC-F30LT with UT-96 5 tone unit is also Camus capable. But, same thing as with Alinco, local delares couldn't confirm or deny it. Anybody knows it? Is there any e-mail contact in Icom where I could check it?

And finaly, it doesn't have to be Alinco or Icom, it could be also Yaesu, Kenwood, Standard, Harris... but I have to know is it Camus mode compatible, and how to order such option or modification from manufactorer/dealer.

If anybody knows something about it, I would like to ask him to send me a note _by mail_, since I wouldn't like to miss such importnat message by skiping it somehow in newsgroup.
Thanx for understanding!

1751. Re: Yaesu 736 6mtr module Q?

>and full pwr. Good luck..Oh Yaesu will deny any knowledge of a problem.
>After much frustration, I got the real story from the designer of "TE"
>amps, here in sthe So Cal area. 73 Mike K6YPB

Of course Yaesu will deny there's a problem. That's because there
isn't a problem with the radio. It is performing exactly as intended,
and exactly as any other competently designed radio would perform
when offered a grossly bad load.

The problem is in the amplifier. It is not presenting a good load
to the radio. If the amplifier designer were competent, there would
be a 50 ohm impedance presented by the amplifier to the radio.
Unfortunately, that doesn't appear to be the case with some
amateur amplifiers. (The input "networks" are often a bad joke.)

Using a length of 50 ohm cable as a transmission line transformer
can transform the impedance presented by the amplifier to some other
value, but it can't transform it to 50 ohms. So you can't present a
perfect load to the radio this way. You sometimes can get it "good
enough", however, since the radio doesn't start to fold back power
until the presented impedance is outside the range of 25-100 ohms.

Note that the impedance may be complex, and depending on the reactive
part of the impedance, the range over which you can deliver a "good
enough" load impedance may be smaller than the range that would apply
for a purely resistive termination.

You *can* use a transmission line transformer to transform some
presented impedance to 50 ohms, but the transmission line's
characteristic impedance has to be something other than 50 ohms,

IE 75 ohm quarterwave lines are conventionally used to transform
a 100 ohm impedance to a 50 ohm impedance for example. You can
easily figure this out using the Smith Chart.

The better course is to fix the problem with the amplifier's input
network so that it actually presents a 50 ohm load to the radio.
Then the length of the transmission line between radio and amp
won't matter (a transmission line won't act as a transformer if
there is 1:1 VSWR on it).

Now Alan doesn't say he's using an amplifier, so if he's seeing
foldback, it is because the antenna he is using isn't presenting
a good load impedance. Again, the correct solution is to fix the
problem, which in this case is at the antenna. The antenna may
be reactive because it isn't resonant on 6m. Or if it is a groundplane,
it'll have a 36 ohm base impedance anyway, unless the radials are
drooped to about a 45 degree angle below horizontal, which will
raise the base impedance up near 50 ohms. Etc. He may even have
a bad piece of coax, or an improperly installed coax connector,
causing a bad load to be presented to the radio.

Note, if he is seeing this power reduction into a known good
dummy load fed with a known good cable, then there really is a
problem in his radio.

Gary

Gary:

I have a 6-meter module I have not yet installed. I believe Yaesu rates
the 6-meter output at 10 watts. Don't know what to say. It's Yaesu!

From ARRL Headquarters
Newington, CT September 9, 1996
To all radio amateurs

SB SPACE ARL ARLS013
ARLS013 UNAMSAT-B in Orbit

UNAMSAT-B, the first Mexican Amateur Radio satellite, has been launched into orbit from Plesetsk, Russia. The successful launch on September 5, 1996, follows years of postponements and disappointments, including the destruction of UNAMSAT-1. The satellite was built at the Autonomous University of Mexico under the tutelage of David Liberman, XE1TU.

UNAMSAT-B functions as a 1200-baud store-and-forward packet file server similar to OSCARs 16 and 19.

Uplinks: 145.815, 145.835, 145.855 and 145.875 MHz; downlink: 437.206 MHz.

In addition to its packet capability, UNAMSAT carries a meteor experiment. The satellite will transmit pulses on 40.997 MHz to detect the presence of meteors entering Earth's atmosphere. By analyzing the data files, which will be made available on the server, hams can get a glimpse of meteor activity over various parts of the globe at specific times.

Reports indicate the satellite is sending strong signals back to Earth. AMSAT says a first look at telemetry from UNAMSAT indicates all is working well aboard the satellite. It is tumbling, as expected, so signal strength and polarization sense are changing randomly. It should lock in on Earth's magnetic field in a few days, and that will stabilize the downlink signals. The transmitter is running at a ''safe'' power level of about 0.2 to 0.3 W.

AMSAT said that observers should expect the satellite to remain it its current mode for several days as the UNAM team returns to Mexico City and works through the checkout and test procedures. Observers are requested to collect telemetry in KISS mode and send files attached to e-mail to wd0eamsat.org for the next 48 hours.

Congratulations to the UNAMSAT team at the National Autonomous University of Mexico. For more information, see their Web page at http://serpiente.dgsca.unam.mx/unamsat/unameng.htm.

Try 137.5MHz and 137.620MHz. The wxsats "broadcast" in FM and the
bw is about 50KHz. A NFM scanner will allow to listen, but not
to receive and display an image. When a wxsat is at a higher elevation
you can hear them on a handheld scanner with the rubber duckie antenna.
Serious recpetion is a bit tougher.

From: kenn2sqw@aol.com (Ken N2SQW)
Subject: Help: re pacsats

I've been involved with the analog sats for over a year now, and am
thinking of trying the digital birds next. What suggestions do you have
regarding a relatively inexpensive way to get on the pacsats? I'm using a
Yaesu FT736R transceiver for the sats. I have a typical terrestrial packet
setup, so I'm familiar with packet from that point of view.
Thanks, and 73, Ken

Please reply either here, or preferably, via E-Mail.
My E-Mail address is: KenN2SQW @ AOL.COM

Could you please tell me how to receive the video? Is it a TV-UHF frequency? I have an old Rabbit receiver, but don't know what frequency it's on....

Hello, Stephen:

Take a look at my Home Page at:

http://www.trucom.com/ppages/marty

I have a Ham Radio and Amateur Astronomy area where the Astronomy area
focuses on Amateur Radio Astronomy.

Take Care & 73

Subject: WTB: Low Output or Dead High Power Transmitting Tubes

I want to buy dead power transmitting tubes. Tubes must not be broken or
physically damaged. I'm interested in tubes with power dissapations 250 watts
to 10,000 watts. Let me know what you have and I'll give you a quote.

You can receive ATV the following ways:

Using an ATV down converter (converts 439.25 to TV channel 3) and a
70cm Beam Antenna

Using an old TV or VCR with manual tuning hooked up to an outside
antenna.
You will have to tune the TV to UHF channel 14 and then try using
your
fine tuning control and tune DOWN. The ATV frequency is BELOW
UHF ch 14.

Using a newer TV or VCR that is cable-ready. Hook the TV or VCR up
to an
outside antenna and then set it for CABLE CHANNEL 60.

The first method is BY FAR the best. Down converters are around $80 and
you can
make your own beam (I did). Make sure your receiving antenna has the
same
polarity as the transmitter. Cross polorization loss on 70cm can be as
much
as 20db.

Radio Meteor Observation Bulletin No. 37 September 1996

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: E.P. Bus
Location: Groningen, Netherlands (6 degr 33' E, 53 degr 13' N)
Frequency: 72.11 MHz
Transmitter Location: Wroclaw, Poland, 130 kW, Distance 740 km
Antenna: Yagi, 3 elements, geographical azimuth 106 degr (ESE),
elevation 12 degrees
Receiver: Bearcat UBC 177XLT Scanning Radio, sensitivity: 0.5 uV
Observing method: Listening

Mean dead time corrected Sporadic Radio Meteor activity between
1996 July 13 and 1996 August 5.
Between brackets the statistical error of one sigma.

Mean Sporadic activity, starting at UT:

10h 11 12 13 14

85(5) 96(9) 90(10) 93(6) 84(8)

18h 19 20 21 22 23 0 1 2-2.5

91(9) 102(8) 112(6) 130(13) 131(11) 166(19) 178(18) 180(12) 103(11)

Mean Sporadic activity of long duration reflections > 1 sec, starting at UT:

10h 11 12 13 14 | 18 19 20 21 22 23 0 1 2-2.5
---
2 2 2 2 3 | 4 4 2 6 5 4 7 6 6

Dead time corrected counts of reflections during one hour intervals.
Between brackets the number of long duration reflections > 1 sec,
starting at UT:

August 11 August 12
18h 19 20 21 22 23 0 1 2-2.5

115(19) 127(12) 169(20) 216(24) 188(16) 271(36) 281(52) 320(70) 116(25)

August 12
10h 11 12 13 14

106(18) 180(21) 138(26) 130(16) 114(10)

. very high activity between Aug 11 23h UT and Aug 12 2h UT.

E.P. Bus

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

August 1996

Notes:

. local time = UT + 2 hours.
. % direct reception
. ? high count to be checked for potential sporadic E.

Maurice De Meyere

Observer: Werfried Kuneth
Location: Villach, Austria (13 53' E, 46 37' N)
Antenna: dipole with reflector
Receiver: AR-8000 at 59.2505 MHz, SSB mode,
Narrow passband filter, no preamplifier.
Transmitter: 150 kW TV video carrier in Bucaresti,
Romania, distance 950 km, east direction.
Observing method: the audio signal is fed into a real time FFT display
(FFTDSP38 program from AF9Y) on the PC where 640 channels of 2 Hz width
are recorded and stored continuously. The sensitivity of each 2 Hz wide
channel is about -171 dBm. Every meteor reflection (in SSB mode)
produces a distinct whistle, which is recorded easily by the real time
FFT program and saved in .GIF pictures of 200 seconds each.
From the 1280 Hz wide received picture only one channel of 40 Hz width
is used for meteor identification, the other nearby "channels" are used
to monitor interference, which can be identified easily this way. If
any interference occurs, the whole 200 second recording of one
picture is not used for further processing.

The following figures show the total length of the meteor reflections
during one hour,expressed as percentage. The number here shows
10 times this value. (e.g. 100 means 10 percent).

| June 1996

(new) Location: near Villach, Austria (13 37' E, 46 45 ' N)
(new) Antenna: 3 el Yagi
Receiver: AR-8000 at 48.2492 MHz, SSB mode,
Narrow passband filter, no preamplifier.
Transmitter (assumed): 250 kw TV video carrier near Madrid, Spain,
distance 1550 km, southwest direction.

| Aug 1996

Notes:
. blank value means either no data available, interference,
sporadic "E", power failure, shutdown during thunderstorms or
transmitter shutdown.
. local time conversion: 2 hours ahead of UT (06h00 UT is 08h00 local).

. maximum Perseid activity during the early hours (UT) of Aug 12.

. *** Radio Meteor Gallery is open ***
I'd like to invite you all to my new Radio Meteor Gallery,
with the best spectrograph pictures out of about one million
recorded meteor reflections during last year. URL is
<http://www.net4you.co.at/user/kuneth/gallery.html>

Werfried Kuneth

Observer: Kimio Maegawa
Transmitter: 50 W CW 53.7500 MHz
Transmitter antenna: 2 element Cross Yagi 4dBi, zenith
Transmitting Location: Sabae city (136 11' E, 35 56' N)
Receiver: IC726 500 Hz BW , sensitivity -154 dBm min
Receiver antenna: 3el Yagi 7 dBi (70 deg, SE direction) height 10 m
Receiving Location: Ohno city (136 53' E, 36 00' N)
Data processing : Receiver output is fed into DX2-66 MHz PC and analyzed by
AF9Y's FFTDSP42 software.
Then stored every 4.22 min automaticaly with GIF format.
Play back GIF files and count echoes manually by the doppler
shift rejecting tropo signal or airplane echo.

Long duration echoes (t>2 sec):

UT | 8/ 9 9/10 10/11 11/12 12/13 13/14
| August 1996
```

Notes:
. local time = JST = UTC + 9 hours
. the radiant was not located favorably when the Perseids maximum occurred: yet a significant relative increase (with respect to the adjacent days) is seen between 0h-2h UT on August 12.

Kimio Maegawa

Observer: Ton Schoenmaker
Location: Roden, Netherlands (6 degr 26' E, 53 degr 08' N)
Frequency: 66.89 MHz
Transmitter location:
Krakow, Poland, 120 kW, distance 980 km
Antenna: Horizontal Yagi, 5 elements, geographical azimuth 110 degrees (ESE), elevation 15 degrees
Receiver: Homemade convertor 65-67 MHz to 28-30 MHz + Barlow-Wadley 0-30 MHz receiver; total sensitivity 0.3 uV for 20 dB S/N with a bandwidth of 3 kHz
Observing method: Brown strip chart recorder, 9 or 18 inch/hour + occasional listening.

Dead time corrected counts of reflections during one hour intervals starting at:

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz).
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2 element Yagi with 4 dBd gain to SW, azimuth: 45 o (SW)
Data sampling system: threshold triggering, sampling rate 64 ms.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.
Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft43.zip (new version!)

>n3tuk@idsonline.com
>
Try 137.5MHz and 137.620MHz. The wxsats "broadcast" in FM and the
bw is about 50KHz. A NFM scanner will allow to listen, but not
to receive and display an image. When a wxsat is at a higher elevation
you can hear them on a handheld scanner with the rubber duckie antenna.
Serious recpetion is a bit tougher.

1758. Contacts via RS-10...

Newsgroup: rec.radio.amateur.space
Date: 1996-09-10 00:00:00 UTC
From: Bruce Sawtelle <71763.3467@CompuServe.COM>
Message-ID: <5145enmki1@mhafn.production.compuserve.com>
Source record: 21531

I've recently gotten my TV-502 tranverter working on the TS-850 and have tried to make some contacts thru RS-10. I have not been successful yet and wanted to make sure I'm "in-sync" with the satellite and effects of doppler. I'm using "PC-Track" that shows ~ 3Khz doppler effect when the RS-10 satellite is coming over the horizon. Therefore, I've been listening ~ 3KHz higher on 10M. For example, I'll transmit on 145.865 and listen on 29.368 +/-. I start closing the gap as the satellite goes overhead and open it up again as it goes towards the horizon. Am I missing something? Haven't gotten a contact yet. BTW, I'm running ~ 7 W to a J-pole (I know, not the perfect satellite antenna, but I thought RS-10 was pretty sensitive). I don't have a 2nd HF radio to hook up to listen to my downlink at this time. Maybe I'll ahve to resort to that path. Are my assumptions above correct?

THanks

Bruce W3NJ

1761. CORRECTION!: Contacts via RS-10

Newsgroup: rec.radio.amateur.space
Date: 1996-09-10 00:00:00 UTC
From: Bruce Sawtelle <71763.3467@CompuServe.COM>
Message-ID: <514uar$4f1$1@mhade.production.compuserve.com>
Source record: 21534

Already I mis-spoke. I have been starting out ~ 3KHz LOWER in
frequency to compensate for the beginning of the pass since the
Doppler effect is INCREASING my frequency as received by RS-10.
To correct my example, I'm transmitting on 145.862 and listening
on 29.365, decreasing the gap until the satellite is overhead, then
increasing the gap until it hits the horizon (i.e. I'll be
transmitting on 145.868 to receive on 29.365). I've tried tuning
around and still no success... Not as simple as RS-12 ;-)

1763. Superior Announces Space Auction

Newsgroup: rec.radio.amateur.space
Date: 1996-09-10 00:00:00 UTC
From: cbush@primenet.com
Message-ID: <515l5q$ra0@nnrp1.news.primenet.com>
Source record: 21536

BEVERLY HILLS--(September 11, 1996)--Space related memorabilia from the personal collections of many pioneering astronauts are among the featured highlights of Superior Stamp & Coin's Fall 1996 Space Memorabilia auction, scheduled for October 26.

More than 1800 lots will be available, including material from the memorabilia collections of astronauts Buzz Aldrin, Pete Conrad, Gordon Cooper, Walter Cunningham, Dick Goron, Gus Grissom, Deke Slayton and others.

This sale, which also features part one of The Igor Sikorsky Collection of Aviation Memorabilia, includes major sections devoted to autographs, prototype and commercial models, and memorabilia of all kinds related to man's exploration of space.

According to Michael Orenstein, director of Superior's Stamp & Space Memorabilia Department, the sale promises to be one of the company's best ever.

"There something for every space buff," he says.

The sale, Superior's tenth since 1992, runs the gamut of space exploration--from early balloon and aviation flights, through the High Altitude, Mercury, Gemini, Apollo, Skylab, ASTP, and Shuttle programs. Also featured is space-related material from the Soviet/Russian space program, including many paintings and sketches by Russian "space artists."

"We have a lot of qualtiy material in this sale," says Orenstein. "Of particular interest is the MK-II full pressure suit, the material being offered by the astronauts, the autograph section, and the models."

Orenstein is excited about the models section, which he says is loaded with original prototype models and rare commercial pieces. Noted prototypes include a Saturn 1B, a Nike-Zeus Missile, and a fabulous Gemini-B MOL model.

"Of course, the U.S. space program is where the strength lies," he continues. "The Buzz Alrin collection in particular should do well."

Many pieces are flown artifacts and mementos astronauts included in their historic flights, with memorabilia from Apollo 11 being the most popular.

Other material--such as charts, manuals and reports--played important roles before, during and after the astronaut flights, according to Orenstein.

"Many of these reports contain handwritten notes and comments the astronauts used on board or in preparation for their flights," he says. "(The reports) are fascinating in themselves, but a note scribbled down by Neil Armmstrong or Gus Grissom along the margins of a chart or flight summary provides perspective and meaning that few in public circles will ever know. They are truly historic documents in

that sense."

Fully illustrated auction catalogues containing descriptions of each lot are currently available for $20 ($40 outside the U.S.) from Superior Stamp & Coin, An A-Mark Company, 9478 W. Olympic Blvd., Beverly Hills, CA 90212. Telephone: (310) 203-9855. Toll Free: (800) 421-0754.

For questions or for information on consigning material to a future Space Memorabilia auction, contact Michael Orenstein or Alan Lipkin.

Bruce:

One other thing. You shouldn't need that second HF receiver to hear your downlink. That's what makes me think you are either listening too far away from the actual frequency, or perhaps your transmitter and antenna just isn't cutting it. You may want to have a friend (on earth of course! - if you have non-terrestial friends, I WANT to meet you) listen for your uplink signal and see if you are really getting any RF out.
Good luck. 73's de Bernie, KF0QS

Dear Bruce: It sounds like people could be hearing you and you are not hearing them! Can you hear yourself on the downlink? If you can, contacts should not be a problem. It seems that you are listening somewhere far away from wherever your downlink signal would be. Before you try and contact someone, just try and find yourself on the downlink. Then, when you call CQ, listen right around your downlink for a response. Or, call someone calling CQ by sending a series of dots and synchronizing your signal with their's on the downlink.
As for doppler compensation, I don't think it's that difficult on RS-10. A good way to guess where your signal would show up on the downlink is to take the transmit frequency (e.g., 145.870 MHZ) and subtract 116.5 to arrive at your receive frequency (i.e., 29.370 MHZ) (see the "Satellite Experimenter's Handbook" for more info on this method of figuring your downlink frequency). When I first got on RS-10, I made myself a little chart so that I wouldn't have to figure it out during a pass. Then it finally occurred to me that the last two digits of the uplink and downlink frequencies always generally match (OK, so I'm not the quickest study around!). Anyway, you'll probably have to tune a few KHZ either way, but using this formula is a good way to get close.
Let me know if you need more info. And I'm sure others will have good suggestions for you.
Take care and 73's de Bernie, KF0QS

1768. Quadrifilar Helix Antennas

Newsgroup: rec.radio.amateur.space
Date: 1996-09-11 00:00:00 UTC
From: evnool@nmaa.ORG
Message-ID: <2.2.32.19960911110025.002e9800@luckier.nmaa.org>
Source record: 21541

I have been experimenting with two construction techniques for the quadrifilar helix antenna. The most recent construction article was featured in the August 1996 edition of QST magazine. An earlier construction suggestion was found in the March/April 1994 issue of AMSAT Journal. So far, I have built versions of each construction and have arrived at what may be considered less than optimal results. With both construction techniques, I get a resulting antenna that has better SWR below or above the design frequency. Has anyone successfully constructed one of these antennas and can point out the construction details to pay particular attention to or any flaws found in the articles? Thanks.

Ed Nowicki

Message-ID: <516m3q$pua@niven.ksc.nasa.gov>
Source record: 21542

Bruce:
Just a couple of suggestions, as I am certainly no expert ;^).
1.Try transmitting a series of CW dits to find your signal, and tune
your 10 meter recever till you find it.Then switch to SSB when you find
it. Make sure you are in USB mode for voice QSO 's on RS-10.
2.Use headphones to listen for your downlink...makes all the
difference in the world.
3.Only 7 watts into a J-Pole sounds a little weak to me (I run 25
watts into a homebrew 5/8 Groundplane for RS-10). See if you can increase
your EIRP to the bird, either via more power or by using a directional
antenna like a good quad or yagi.
4. Try to make your first QSO's when the bird is making a fairly high
pass, say above 40 degrees elevation or so.(same effect as number 3).

Good Luck !

Bruce,

Let me say IMHO
You really need another HF 10 Meter receiver.
You NEED to listen to your downlink signal!
How else would you know to change for doppler shifts/changes?
The standard practice is
Select a REC frequency
Tune your transmitter until you hear yourself on the downlink side
Change only your uplink frequency to stay on your selected downlink
frequency.
And have fun
You will notice that you will being constantly changing your transmit
frequency even while you are talking just to stay on that downlink
frequency.

Hummmm seven watts into a j-pole that might be a little on the weak side

I did work RS-10 from a hotel room with 25 watts while I was working in
the Denver CO area
using a kenwood 751 all mode 2M mobile
5/8 wave mag mount antenna stuck to the railing
a Icom 735 hf receiver with about 50' longwire thrown over the hotel roof
:-)

Good luck on your future attempts !

The problem, as I read the posting, is that he is not listening at all
since he has to use the HF radio for the uplink transverter. Instead,
he was attempting to calculate the doppler shift according to his computer
program. There are probably too many variables to be able to do this
accurately, such as computer clock, updated Kepler elements, program
accuracy (varies wildly in my experience), equipment dial calibration,
antenna pointing, etc.

RS-10 is probably the easiest bird to work but you have to hear yourself.

Bonjour a tous !

La redaction de Space News InNet, dans le souci de conserver sa reputation de magazine novateur, est particulierement fiere aujourd'hui de vous annoncer la naissance de Sat-Forum-Espace, premiere liste de discussion francophone entierement consacree a l'Espace, l'Astronomie, l'Astronautique, les satellites ainsi que les sciences connexes.

Vous pourrez desormais utiliser ce service pour adresser vos questions ou faire part de vos impressions, de votre experience, a l'ensemble des membres de la liste, et recevoir les messages emis par tous les abonnes dans votre propre boite electronique sur l'Internet.

COMMENT FAIRE ?

Tout d'abord, vous inscrire sur la liste. Si vous ne l'avez pas ete d'office, c'est tout simplement en pensant a tous ceux qui, pour des raisons personnelles, desireraient recevoir Space News InNet et Forum-Espace a des adresses differentes.

Pour vous inscrire, transmettez un mail a :

majordomo@tags1.dn.net (*)

en laissant le "subject" vide et comportant dans le corps du texte: subscribe sat-forum-espace suivi de votre adresse Internet.

Vous recevrez apres quelques minutes un message de confirmation et ferez partie desormais du groupe de discussion de Space News InNet. A partir de ce moment, vous recevrez automatiquement les messages emanant des abonnes a la liste.

Pour envoyer un message, vous devez l'adresser a :

sat-forum-espace@tags1.dn.net (*)

(*) Le caractere suivant 'tags' est un 1 (un) et non l (L).

FONCTIONNEMENT

La liste de discussion est moderee. Tous les messages y sont admis, du moment qu'ils soient en rapport avec le sujet. Ne sont pas autorises les messages injurieux, grossiers, diffamatoires, ou dont le texte se revele contraire a la morale ou aux bonnes moeurs. Les attaques personnelles ne sont pas non plus admises.

Chacun peut adresser a la liste autant de messages qu'il le desire. Toutes les questions sont les bienvenues, et si vous connaissez la

reponse a l'une d'entre elles, repondez ! Je ne doute pas qu'avec un sujet aussi vaste, elles seront particulierement nombreuses !

QUI PEUT S'ABONNER ?

Tous ! L'abonnement a Space News InNet n'est pas obligatoire pour participer au forum, mais il est conseille, puisqu'il s'articule autour du periodique et permet a tous de le commenter.

Bienvenue a tous sur Sat-Forum-Espace, n'hesitez surtout pas a vous annoncer sur la liste des que vous y serez inscrit, et pourquoi pas a vous presenter en decrivant vos centres d'interet en astronomie !

Jean Etienne
etiennj@interpac.be

Hello J.
Well the frequency is OK. I believe it was
heard over Iowa, USA at around 1629 day of
launch. The Japanese Antarctic Research
station are pushing up the Apogee of JAS-2
as high as it will go. After launch date the
control station suggested one month to
run-up the satellite system,and do testing.

It has been years since I owned or used a TRS-80. There are several
different models. If you have the Model I, the earlist units, which
can be recognized by the unified keyboard/cpu units(on the left rear
(while looking at the rear)there are 3 din connectors(power/
monitor/tape)). If you have the model I it does not come with an
RS232 I/O port. (they came out with an "expansion" interface that
added 48K of ram, RS232 I/O, and a disk controller(up to 4 180K 5 1/4"
[though there was a disk doubler by percom]. Next you could have a
TRS-80 Model III (I was never "lucky" enough to own a model 2).
It is a larger unit with a keyboard and monitor in one case.
These typicaly had a RS232 I/O port. Then there was a Model 4 (and a
model 4P{a "portable by virtue of the attached handle}-these where
perhaps the "best" 2 5 1/4" 360k disks. Then there was the little TRS80
model 100(and a bunch of clones by Kyrotronics, NEC etc). The 100 is a
nice unit because it came with a built in communication program.
My first packet QSO was with a TRS-80 (16K ram with the level 2 basic)
and a perf-board add on and a piece of software for "Ridgecraft(or at
least that is what I think the name was). The perf-board had a cmos
pll (4049?) for rcv and a cmos hex inverter for the tx. It worked
fairly well, I do not recall it ever locking up. I only used it for a
about a month. Then I got a TRS80 Model 100 and a GLB PK1 (this was an
early tnc that did all the "work" with software..the PK1 used a Z80A
@ 3.58 and could support up to 16K of cmos ram.)
The whole point of this is that any of the TRS80 family can do packet
as long as your unit has a com port and you can write/beg or steal
a com program(and you have a TNC). If you have a model I or III and
canfind the Rigdgecraft software, you would not even need a terminal
program or com port.
I hope that this gets you pointed in the right direction. Good luck.

I just downloaded winorbit and am having problems with the "next predicted pass" projections. They dont seem to be jiving with some online prediction programs Ive used. The tracking seems to be ok tho. Anyone using this program? Is it a good program? Im kinda new and trying to learn, would like to start working the hf birds. Thanks. WB5KXW

1778. ground tracking station

Would like to see if anyone out there in the field could give us some info
on setting up a ground tracking station that will be used in a small
satellite project. We would like to be able to receive signals from a
satellite that
will be placed in a LEO. This project is just starting out, so any info.
would be greatly appreciated.

Hello Ham radio user

I am not a ham radio opoator, but cannot find on the net the information I require. I am a CB user who is having problems with another Adult CB user. Myself and another 4 people regularly take to each over on the CB, the other person, searches for what channel we are on and starts to sware stuff like that, the thing is one of the CB`ers have children.

Is there a circuit I can build which will make it so all the is getting a constant carrier, n an area of 2 house, from 27-28mhz so stopping hime for finding out what channel we are on. Once the battry of the circuit dies down we will retreave the circuit then, hopefully this will teach him a lesson
if anyone does have a circuit, can you draw the circut using an art packet age EMAIL it to :- sonci@legend.co.uk

Thanks for reading my message, hope anyone can help

Andy

That's the bug. In that version, the next pass was calculated from the computer clock time. If you live in the USA, that's about 4-6 hours BEFORE UTC, so what it shows you is often the previous pass (or even 2-3 passes previous) . You can set your computer to UTC, or download a current version (2.9) from :

http://www.sat-net.com/winorbit
http://www.amsat.org/amsat/ftpsoft.html#win
or
ftp://oak.oakland.edu/pub3/hamradio/dos/satellite/winorb29.zip
ftp://ftp.seds.org/pub/software/pc/sat/winorb29.zip

The above sites have lots of other good software and info, too.

1784. ****QUICK AND EASY CASH****

Newsgroup: rec.radio.amateur.space
Date: 1996-09-13 00:00:00 UTC
From: elrata@dtdsi.com
Message-ID: <5cd_9609131456@dtdsi.com>
Source record: 21557

* Copied from: ALT.ROCK-N-ROLL.METAL
Subject: ****QUICK AND EASY CASH****

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe an tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail' for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups you can. Then sit back

and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

STEP 1. Write your name and address on 5 separate pieces of paper with the words "PLEASE ADD ME TO YOUR MAILING LIST". For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time! Fold a $1 note or money order or bank draft in each of the pieces of paper and mail them to the following five addresses:

```
**********************************************************
* 1. Michael W. Graham
* 7342 146th St. SW Apt. C
* Tacoma, WA 98439
*
* 2. Dave Alexus
* 918 Sunridge Dr.
* Sarasota, FL 34234
*
* 3. Greg Farries
* 119 Mount Crandell Crescent West
* Lethbridge, Alberta
* Canada T1K 6L7
*
* 4. John Wise
* 2130 Cameron Cir.
* Birmingham, AL 35242-6411
*
* 5. Alejandro Pelaez
* Rafaela 5171 Dto. B
* (1407) - Capital Federal
* Argentina
**********************************************************************
```

STEP 2. Now remove the 1st name on the list, move the other 4 names up (5 becomes 4, 4 becomes 3 etc) and put your name and address as number 5 on the list. You can do this by re-typing this article or simply editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are 17 000 of them).

You are now in the Mail Order Investment Business and you will start receiving $1 returns by mail within a week or two. The more newsgroups you post to, the bigger your return will be.

HOW THE SYSTEM WORKS

Of every 200 postings I made, I received an average of 5 replies, YES - ONLY 5, each with a $1 bill enclosed. You make $5 for every 200 postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say, only 200 additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings. On average therefore, 25 people will send you $1 with your name at number 4. You make $25.

Your 25 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3 or 5 000 postings - average return 125 at $1 each is $125. They make 200 postings each WITH YOUR NAME AT NUMBER 2 = 25 000 postings = 625 returns at $1 each = $625.

Finally, 625 people make 200 postings each WITH YOUR NAME AT NUMBER 1 and you get a return of $3125 (for every 200 postings) before you name drops off the list. Total income in one cycle = $3905. AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS!

From time to time, when your name is no longer on the list, you take the latest posting that is appearing in the newsgroups, SEND OUT ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this

THE ONLY COST FACTORS ARE

5 STAMPS
5 ENVELOPES
5 $1 BILLS

Anyone can afford five dollars to put into such an effortless investment with SPECTACULAR RETURNS.

Some people have said to me "What happens if the scheme is 'played out' and no one sends me any money"? Big deal! So you lose $5 - but what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep
an eye on the newsgroup postings to make sure everyone is playing
fairly. You know where your name should be.

REMEMBER - HONESTY IS THE BEST POLICY.

ENJOY!

>
>Bruce:
> Just a couple of suggestions, as I am certainly no expert ;^).
> 1.Try transmitting a series of CW dits to find your signal, and tune
>your 10 meter recever till you find it.Then switch to SSB when you find
>it. Make sure you are in USB mode for voice QSO 's on RS-10.

This is a bit hard to do with a 502 transverter (not duplex capable)

> 2.Use headphones to listen for your downlink...makes all the
>difference in the world.

If he was able to duplex, this is an excellent suggestion to reduce
the echo, background noise, and feedback potential when listening while
talking.

> 3.Only 7 watts into a J-Pole sounds a little weak to me (I run 25
>watts into a homebrew 5/8 Groundplane for RS-10). See if you can increase
>your EIRP to the bird, either via more power or by using a directional
>antenna like a good quad or yagi.

A ground plane has more radiation at higher elevations than a J-pole.
The point of a J-pole is to keep the signal on the horizon rather than
at higher radiation angles.

> 4. Try to make your first QSO's when the bird is making a fairly high
>pass, say above 40 degrees elevation or so.(same effect as number 3).
>Good Luck ! 73 de Roger, KD4ITU

Sneak a look in the satellite handbook at your local ham store to get some
ideas concerning antennas which work with Low Earth Orbit (LEO) "birds".
Heck, if you get the bug, go buy one!!

> if so, should i at least hear my echo break squelch at all with FM?
> ooooooor i'm I out of luck, and should forget it untill i get a multimode rig?

For EME you'll need to operate CW with as as big an antenna and as much
power as you can get. A 9 foot dish is too small at 440 MHz. It provides
only 18dBi of gain -- about as much as a long yagi. I haven't tried EME
yet, only satellites. However, I did the link budget calculations to see
what was possible with a TVRO dish and minimum configurations to hear
your own echos are:

432 MHZ: 1KW and 4 long (20 foot boom) yagis
1296 MHZ: 250W and a 12 foot dish
10 GHz: 10W and a 12 foot dish or 50W and an 8 foot dish

In all cases you need a receive with a very low noise preamp at the
antenna and effective radiated powers of 200KW to 1GW.

There are some people working on low power EME with lots of digital
signal processing. See AF9Y's home page at http://www.webcom.com/af9y/.

Mir is presently running packet. The last couple of days I have heard Shannon and the Russian cosmonauts in voice contact with Houston. Sometimes they will work a few amateur stations once they start losing Houston.

After two passes they have been placing the packet station on the frequency.

I attemped to make contact on voice, but wasn't able to. I did manage to get connected to the packet station, but wasn't able to list or leave a message. I'll keep trying though.

At this risk of offending because this may have been posted before--I have not found anything to indicate such--I would like to ask if anyone has compiled a list of locations and frequencies on which the shuttle air/ground is being retransmitted in the U.S. and worldwide.

If there is such an animal, please send me email with the address or URL.

If there is not, I will consider creating one from information provided (city, state, country, frequency, callsign, coverage area). I will post it here and post it on the Johnson Space Center Home Page

http://www.phoenix.net/~mbordel/jscarc/shuttle/

Yup Dale - there is. Check out the AMSAT WWW page. I forget the exact
URL, but Bill Bard is the compiler of the list.

http://www.amsat.org/ will start you on your way.

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps

Heartland Internet Services -- Lots of Web Presence information

The URL to use is:

http://www.trucom.com/ppages/marty

Thanks!

Take Care & 73

> or using an inappropriate frequency without consideratin for other
> users of the band?
>
> Jim WB6JNN/9, Wisconsin, USA

The latter.

For example: My amateur ticket allows me - and all 8P - to run AM,
SSB, etc, in fact all legal modes, on the 30-meter band. This would
obviously be an extremly inconsiderate thing to do, but it would be
perfectly legal.

Personally, I wouldn't be caught _dead_ running SSB on 30, because I
have some consideration for the other users of that band. But the
amateur radio fraternity is entirely too full of people who would
relish the opportunity to do just that, and the rest of the world be
damned!

QRO AMTOR on the QRP frequencies, Packet/QRM machines on full-auto in
the RTTY portion, DX nets on the SSTV freqs, SSB in the CW sub-bands,
FM on 20, local simplex chattering in the weak-signal satellite downlink
segments and any suggstion that this isn't advisable is met with talk
of "the right to free speech" and other such twaddle, plus threats of
legal action.

Well, in 25 years (some say 10 - they may be right) it'll all be over
anyhow, with the closure of the amateur bands. And I have a pretty
good idea who will be to blame, since I'd say 90% of this short-sighted
behaviour I have observed comes from a single quarter. But then, perhaps
I am getting a false picture, since geography obviously affects who I hear

most and may be distorting the picture.

Use modem 18, the one the TNC knows as 9600.

BTW: what firmware do you have? I've heard of a new version but
haven't heard from AEA. I have 1.00. And it will NOT work KISS
on the 9600 modem... its a known bug.

I have a new AEA DSP-232 TNC and cannot make it run on 9600 baud.
The manual says to use Modem 16, but the TNC shows 9600 packet as
Modem 18 when you do the DIR command. Doesn't matter, neither one
works for 9600. On Modem 18 (like the TNC shows) tuning bar goes off
and nothing happens. Anyone have theirs working?

BTW, it all worked when I had my DSP2232 (shouldnt have sold it?)

Mike Snowden (Pmikes@fishnet.net) wrote:
: Hello Mary. I have a newer FT 736. On 6 it should put out 10 watts in the
: FM mode. If your not getting full pwr out, carefully check all your
: connections and the SWR. If your SWR is high, the rig automatically
: "folds" back the output pwr tp protect the rig. I found that by putting
: an SWR/PWR meter between the rig and my amp the rig would put out full
: pwr. Another trick is to trim a short piece to until you get a flat SWR
: and full pwr. Good luck..Oh Yaesu will deny any knowledge of a problem.

Trimming the coax will NOT affect the actual VSWR, although it may "fool"
the rig into thinking that it is operating into a matched load. This is
because the input impedance of the coax varies with coax length.

The reason it does not affect the VSWR is that the match between the
coax and the antenna are the only factors. You cannot do anything at
the input end of the coax that will affect the VSWR.

Mir has been up on packet from September 6 to present. read my message number 23. When it first came up I had time to post, read my post, and change it on the same pass ! Yesterday I posted message number 103. two orbits later it was up to message 105. Yet there were 5 or 6 stations trying to connect at the same time. Also throw voice in on the same freq. I made 3 or 4 voice contacts too. Good luck on any contacts you try to make.

1806. Communication with Moon

Newsgroup: rec.radio.amateur.space
Date: 1996-09-16 00:00:00 UTC
From: enw3737@acs.tamu.edu
Message-ID: <51juo7$jbm@news.tamu.edu>
Source record: 21479

Howdy,

I am a mechanical engineering student at Texas A&M University, and I need to know if there are any current satellite systems, or earth based systems currently set up to facillitate communication with the moon on a constant basis. I have already examined the TDRS system, as well as the Deep Space Network, and neither system, from the literature I read, was capable, or willing, to do it. This is for my senior design, which involves collecting solar energy on the moon, and transmitting it back to earth.

Please, if you have any info, either post it here, or e-mail me directly at

ENW3737@ACS.TAMU.EDU

Thank you very much,

Hi,
Can either of you make any comments as to which (the 232 or the 2232)
is "better" for satellite work? Money really isn't an issue, and I like the
capability of being able to do two channels on the latter.
Also, someone told me that I should be looking for "G3RUH" compatibility
so that I would be able to do a modification allowing the modem to do 56Kb/s
on 23cm. Is any familiar with this, and will these modems do this?

Thanks.

Transmitting the power back to earth or Data back to earth ??

Is there any spot on the moon that doesm't have a 2 week night time ?

If you wanted a 50% duty cycle put the solar collector in the back
yard. :-)

What happended to the Aggie project about going to the SUN,
the landing was to be at night ??

Ed,

You don't really need satellite systems to talk to the
moon 24 hours a day; just a system of earth stations that
that track the moon, three would be a good minimum number.
There are issues related to noise when the moon is near
the horizon of Earth as well as other issues, but
the problem is somewhat trivial.

Your senior project is interesting, however I would
think, off hand, that it is easier to set up solar field
at various locations around the earth and collect
solar energy. In your system, the idea, (guessing) is
to efficiently collect solar energy on the moon and
transmit the energy to earth, saving the attenuation
loss due to atmospheric effects during solar collection.

However, my 'system engineering guess' is that transfering
the energy from the moon to the Earth is just as inefficient
and much more dangerous and ecologically controversial,
an issue that we engineers have to content with.

Have Fun!

I must be a complete idiot. I just cannot seem to get winorbit configured correctly or something. Im just trying something simple first, just trying to track do-17 and listen for it on the downlink. For some reason the program isnt working like I would hope. I tried changing the keps (as best as I could determine from the latest 2 line kep file I downloaded) but it still isnt right. I dont understand how to actually load a new kep file into the program and get it to work. The documentation, to me, seems a bit lacking, or maybe Im just overlooking something. Is there anyone that would care to spend a few minutes a day for a bit via email and help me out? 73 de WB5KXW

They would if you correct the typo... I think it should look like this:

http://www.av.qnet.com/~kn6dv

Hey, that's what the internet is for!

The way I get new info into Winorbit (which may not be the author recommended way) is I find the latest post in this group from W1AW with the 2 line number sets. I copy just the data part, leaving out the headers and all, and paste that into Windows Notepad. Then I save that as 9-16-96.2li (or whatever the date of the data is from) and launch Winorbit. In the tracking window, Select "satellite". In the new window, select "file", then "open 2 line" and select the file just created in notepad. Now all the updated info is in the list of satellites and I could select do-17 and then click "OK".

I haven't mastered all the different formats the program seems to handle as far as impoting data goes, but the 2 line format file seems to get the job done for me.

Don't forget to set your clock on your PC as accurate as possible.

Good luck
-BP

Thanks for reading this. I have for sale a Landwehr 2 meter preamp. it was used for AO-10 and AO-13 downlink reception. It is in mint condition never mast mounted and never used outdoors. It provides 20 db gaon with a 0.7db noise figure. It will automatically switch out of the line if RF is sensed up to 150 watts. I will ship this unit for $90 (new retail at Henry Radio is $179).

If interested please Email me at kn4hh@avana.net

Is there a ATV Station retransmitting the Nasa Select SHUTTLE in
Connectitut ? I see some faint video on 427.25 Mhz (Ch 58 CATV)

1825. NORAD Two-Line Orbital Element Set: Space Shuttle (96260.75499830)

Newsgroup: rec.radio.amateur.space
Date: 1996-09-17 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <51mn72$14l@blackbird.afit.af.mil>
Source record: 21498

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

1830. Indiana Repeater/ATV/Packet APRS Balloon Launch II

Newsgroup: rec.radio.amateur.space
Date: 1996-09-17 00:00:00 UTC
From: h1riley@umassd.edu
Message-ID: <51n587$7pi@gatekeeper.umassd.edu>
Source record: 21503

This is a repeat performance of the very successful launch which
took place Sept. 7 near Kokomo, IN.

CENTRAL INDIANA REPEATER/ATV/GPS PACKET BALLOON LAUNCH

Region: Central Indiana

Date/Time: Saturday, September 21 / 7:00-8:00 AM
Eastern Standard Time (Indiana local time),
8:00-9:00 AM EDT, 12:00-13:00 UTC

Location: New Augusta, Indiana (Indianapolis suburb
about 7 miles northwest of downtown)

Other states the
signals will
easily reach: Ohio, Illinois, Michigan, Kentucky

Site Coordinates: approximate for initial antenna heading;
(not for navigating to launch site)
39' 53" North Lat.
86' 14" West Long.

ATV: 439.25 MHz AM NTSC from live camera;
VERTICAL polarization.

VHF/UHF Repeater: Input - 144.30 MHz FM
Dual Output - 444.85 MHz FM
- 52.525 MHz FM

Telemetry: 446.00 MHz FM AX.25 1200 baud packet
GPS/APRS position data

HF Net: 3.869 - 3.871 Mhz SSB

Local repeater
talk-in: not yet determined

Other notes: all antennas vertically polarized

Hi Paul, this was recently posted the the UK scanner listserver

For those interested in UHF-SATCOM and the more technical issues I
suggest pointing your browser to http://bbs.itsi.disa.mil:5580/T3564.
There are some interesting MIL-STD documents available here. There is
complete UHF SATCOM freq-list in Appendix C of m188-183.zip This
document is about DAMA networks on SATCOM, all very
interesting if you are in to this sort of thing.

Cheers PaulJ

ARLS014 Shuttle carries three hams

ZCZC AS22
QST de W1AW
Space Bulletin 014 ARLS014
From ARRL Headquarters
Newington, CT September 17, 1996
To all radio amateurs

SB SPACE ARL ARLS014
ARLS014 Shuttle carries three hams

Three hams are aboard space shuttle Atlantis, which was launched at 0854 UTC Monday morning. Astronauts aboard include Jay Apt, N5QWL; Carl Walz, KC5TIE; and John Blaha, KC5TZQ. Blaha will spend 120 days as a resident on the space station Mir, replacing Shannon Lucid, who has been living on Mir for the last six months. The shuttle will dock with the station on September 19 at 0317 UTC.

STS-79 is carrying the Shuttle Amateur Radio Experiment (SAREX) payload in Configuration M. Configuration M is voice-only operations on a downlink frequency of 145.840 MHz FM. Voice uplinks are on 144.45 and 144.47 MHz. Packet radio is not on Atlantis this mission. SAREX equipment was to be set up early in the flight. The crew has three prearranged contacts with schools: Andover Middle School in Andover, Kansas; Immaculate Conception Elementary School in Celina, Ohio; and the Royal School For Girls in Haslemere, Surrey, England. The students have been preparing for their contact for several months. These contacts will occur after the shuttle has docked with Mir. Random contacts will also be made with the ''ham'' community.

Amateurs should check W1AW bulletins and AMSAT SAREX bulletins for Keplerian elements and information about possible random contact opportunities. SAREX operating frequencies and additional information can be found on the ARRLWeb SAREX page, http://www.arrl.org/sarex/.

1833. Re: Is SAREX on STS-79??

Newsgroup: rec.radio.amateur.space
Date: 1996-09-18 00:00:00 UTC
From: Philip Chien <kc4yer@amsat.org>
Message-ID: <51nh9j$l65@paperboy.ids.net>
Source record: 21506

John Jordan, rb@cyberhighway.net (KB7VZL) asked -
>Is SAREX on STS-79??

Not only yes, but heck yess. Dr. Jay Apt N5QWL is one of the *MOST*
enthusiastic ham astronauts.

Do remember that the radio is a dual-purpose piece of hardware, and the
priority is for shuttle-to-Mir communications. It's the SAREX-M
configuration which is voice only.

: curator@ozemail.com.au

September '96 PopComm lists 261-263Mhz and 269-270mhz. Commercial
satellites leased to supplement these are Lesat, Gapsat and Marisat using
240-399Mhz.

1835. GET AN ANONYMOUS EMAIL BOX!!!!!!!!!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.space
Date: 1996-09-18 00:00:00 UTC
From: ben there <bull@bbbn.com>
Message-ID: <01bba542$9c98ba20$37a5b9ce@rwwatkin.cswnet.com>
Source record: 21508

FINALLY YOU CAN HAVE A TOTALLY ANONYMOUS IDENTITY ON THE INTERNET. As we all know one of the best providers of this, anon@anon.penet.fi, just discontinued its anonymous e-mail service. Many have done this recently. The ones left are often so hard to use and set up, it takes a rocket scientist to figure it out. Penet was not exactly easy. Well that's where we come in. We offer an advanced anonymous mailing service, The way it works is so secret that "I could tell you, but then I'd have to kill you". I can tell you this much about it. Once we set you up with an account you can send and receive e-mail all you want with the knowledge that your mail never even goes onto your web server at all. You will have an off site e-mail box that handles your messages. The site where your email is handled does not even know who you are. we don't want to know who you are. Not even when setting up your box. Not only that. When logging on to this web site, you will have already gone through channels that strip your identity away before logging on to the site. After all, how can anyone know who you are when there are no trails back to you.

This has nothing to do with your present email provider. Your mail you receive on this account, never goes too your present email site. You do not even use your present email software to retrieve your mail. You will simply use your present web browser (like Netscape or Microsoft Internet Explorer) to connect to a web site based email site. You will then do your email send and receiving , right there on the site. You will have of course, already gone through an undisclosed path to the site.

Here is the beauty of our service. We provide you with easy. Did I say easy!!!!!!! Yes an easy anonymous web presence that until now has been a nightmare. Have you ever tried setting up your own anonymous email before. I've been ready to trough my computer trough the wall several times. It is certainly not easy for most people to get it right. All the work will be done for you. When we set you up you will be sent a link that will take you through the whole complicated trail. You can simply double click on a desktop icon or put the path in your bookmarks or favorites. You connect right to the site, where you are asked for your nickname and password. Then you are in. You compose and send email right there on a very easy to use web page.

Now I am going to say something that is said to often, but it definitely applies in this case. This is so easy to use that a 5 year old can do it. I know because I showed my little boy how. Within 10 minutes he could log on a nickname and password and could have composed his on mail, if he had known how to read and right. It is really that simple. No more "enon-x " this, and "enon-send" that. I never could get all that crap right.

The best is that you can rest freely in the knowledge that some busy body is not tracing your activities back to your server, where it is very easy to identify your identity. Unfortunately most people do not realize just how easy it is to identify you, with the present system of anonymizers. If you send and receive email on your service providers system, then you can be traced. Unfortunately some extreme examples of this have occurred in China, where people have actually lost there life in a struggle to gain a democracy there. They thought they were safe using the anonymous sites out there. That cannot happen with this service, because no one can just walk in and seize the records of the users names on the system. There are no real ones the way i will set it up for you. This happened at anon.penet.fi at least twice, as I understand it.

You might wonder if this Email service supports file transfer. You bet it does. If your Web browser supports the attachment of documents and files (e.g. Netscape Navigator 2.0 and later or Mirosoft Internet Explorer), you can send them. Due to limitations of bandwidth requirement to send and receive documents, only one attachment can be sent with each Email message. You may also receive attachments sent to your account. They show up as downloadable hotlinks which can be downloaded to your personal computer by clicking on them. Gif images are automatically deciphered by the system and displayed in the browser window.

So what are you waiting for. All the cost to you is our processing fee of $29.95. That is it. All the free email you want to send from then on. It is possible to do this do to the fact that the web site is advertiser supported, as are others popular sites, you see on the Web. Just send a money order or cashiers check made out to:

Richard Watkins
300 Rustic Hills
Royal, AR. 71968

Let me know by Email as soon as you decide, so I can be processing your account. This is not needed, but we can have you up and running sooner. We can then Email you with your Email address and password. Note you can change the password once you log on. We need to know what NICKNAME you would like. Please give us several choices, as many are already taken. We might have to add a number to the end. Such as: foxygirl22 Your nickname may be up to a total of 12 letters and numbers.

email it to : rwwatkin@cswnet.com

Please label subject line of email to us as: new email cust

Please make note that I am also trying to put together an anonymous snail mail service, for those that wish to send letters and packages. I aready have it about worked out. If you would be interested in this, please email me for more information as it comes to be.

Source record: 21510

Hello, I'm trying to collect telemetry data from DOVE. I get several messages each pass, but the data looks to be corrupted, it can't be read by several different programs, it's not ascii, and I can't decode it from a hex listing using a table from the ARRL sat book. Could it be possible there is a problem with the satellite? Anybody have a clue what the problem might be, let me know. Thanks for reading this post.

I can't believe it! There doesn't seem to be a relay for the shuttle audio anywhere in the Northwest. The AMSAT list shows no entries for the states of Washington, Oregon, Idaho, or Montana.

Major bummers!

Does anyone know of a shuttle repeater, either shortwave or VHF operating in the vicinity of Boeing Field?

Please email and post.

Thanks

Yes, we in the States have adopted some pretty irrational ideas about "free speech". One used to have to try to be civil, at least!

My response to Gus's latest response...

I assume you are refering to some folks just north of you (i.e. in the USA). From my persepective, however, I seem to hear some really strong signals from South America at times when KW stations from the states are coming in pretty weakly. Someone's running more power than they ought.

Of course there are also the maritime mobiles who got licenses in certain central American countries without benefit of anything more than the appropriate "fee".

There was also the issue on OSCAR 10 and 13 when they were visible to Europe after which most QRP stations just didn't bother to try anymore. AGC on the bird depressed the gain so low due to high power operators that stations with only 10-50W had no chance!

No, I don't think U.S. hams are the only problem users of the ham bands!

We need to be a "we" not an "us" and "them" or we will degenerate into chaos. This was (I intended, at least) the point of my posting... co-operation, not finger pointing. I felt the original post came much closer to "finger pointing" than to a constructive suggestion that something different could have been done with regard to frequency choice.

As to loss of ham bands, it will be governments like my own who insist on selling spectrum to the highest bidder who push that one on us, not poor operators. We already have international companies who hold no allegiance to any country who control most of our essential services such as communications. Buying control of the airwaves used to be unthinkable, but now it has become a national passion.

I still maintain, however, that BOTH attitudes in the original postings were inappropriate. If not in content, then in spirit. In a short posting I took a chance that my point might not come across. Perhaps it didn't.

Hi everybody !

Any UHF-Milsats recepcion reports from people in Europe ?

I wonder if FLTSATCOM 8 is still acitve and receivable here
in Europe (or in the eastern USA).

Would like to hear from people who received or still receiving
signals on that band. Especially I am interested in observed
types of modulation (as far as I know most of the comms are
in FM, but what about SSB which might be more efficient ?)
and the types of receivers and antennas used....

Unfortunately my RX is a little bit "deaf" in that frequency range ! :-)

Best 73 and good monitoring.....

Oscar, DJ0MY

1855. Re: Indiana repeater/ATV/Packet APRS Balloon Launch

> posting I took a chance that my point might not come across. Perhaps it
> didn't.
>
> Jim WB6JNN/9 jimeagle@execpc.com

Ok, lets look at it this way:

In the original message, the person who posted it complained that
the INPUT frequency should not be used for the balloon since it
did not fall within the band plan for repeater inputs on 2 meters.
However, using a standard repeater input on a balloon that potentially
covers an 8 to 10 state area would be insane! The balloon would be
constantly jammed by all the local repeaters who's opperators would
have no idea that there was a balloon operating on that frequency,
rendering the cross band repeater useless. The balloon would have to
put up with this jamming since the local repeaters are coordinated
and the balloon is not. Having the INPUT in a part of the 2 meter
band not set aside for repeater inputs would cause interference to
no one. Individual operators would have to make sure that 144.300
is not in use in their area before contacting the balloon (it is
up to these people not to cause interference).

So back to the origional post --- what's the big deal about using
144.300 for an input frequency?

Which brings me back to my post. I was not trying to display an
'attitude', mearly trying to address the facts as they apply to
this case. I live 5 miles from the launch site of the first
balloon and have heard no one in this area rase any complaints
about the selected input frequency.

Mark

Cross-posted to: sci.space.shuttle,rec.radio.amateur.space

I would like to draw the attention of everyone interested
in visual satellite observing to the second edition of the European
Satellite Observers Meeting (Eurosom), which takes place in Ghent,
Belgium during the weekend of October 19/20, 1996.

This rather informal meeting will feature (english language) talks
by experienced satellite observers from the United States, Sweden,
United Kingdom, Germany, France and Belgium. Video-observations of
high-resolution observations of e.g. Shuttle-MIR; Shuttle and external
tank re-entries; artificial comets; several tethered satellites;
the Galileo Earth flyby at 600,000 km range; etc. will be shown.
The calculational and software aspect of our hobby will also receive
attention, as will advanced observing programs of positional,
flash period and space debris measurements or observations.

Registration costs are 400 BEF (about 14 US $) which includes a copy
of the proceedings and should be done NOW. You can register through WWW.
Check out the Eurosom Home Page for details:
http://www.rzg.mpg.de/~bdp/eurosom.html

Cheers,
Bart

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my wife, attorney and friends about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. Of course, I rejected the idea at first. after a short period of about two weeks ,I thought : "I have already heard of such things. But on the Internet ?!?!? ". I decided that even if I had to throw $5 into the fire, I wouldn't mind it that much, and gave it a try .After all I needed a LOT more than five dollars.

Two weeks later, I began receiving money -- every day! I could not believe it! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had received a total of $32,445! It came from everywhere in the world. My bank account has changed its "-" into a big "+" (++++)!!!,I bought myself a car and things I wanted for a long long time for my wife and kids!

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you receive a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple: 1) Write your name and address, an e-mail address, and the name of the newsgroup where you learned of this on 5 sheets of paper. Below that, write the words, "Please add me to your list." Fold $1 note or bank draft or money order in each piece of paper and send them to the following 5 addresses.:

1. Oleg Gorbik,
10834-97 St.
Edmonton, AB, T5H 2M3 CANADA

2. Nir Levi,
PO BOX 342
Yavne, ISRAEL

3. Landon
#1 Lakeway Drive
Conroe, Tx 77304 USA

4. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

5. Beyond Technology
5641 Apgar Street
Houston, Texas 77032 USA

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. Use a simple text editor such as Notepad, in your "accessories" window (If you have MS-Windows),or DOS editor. In fact, any editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many. Try posting to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message!

You are now in the an order services business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself "The Manager", "The Boss", whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money? "Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five separate dollars? just think of all of the new Internet users that join the net every day!!!

There are millions of internet users, and millions of new net surfers every month !!! This is the great plus of the Internet, people all over the world can hear you and listen carefully if you talk reasonably. Everyone will take that chance ! I agree, If it wasn't the Internet, and was a small circle of people, the chance wouldn't have been so small. the amount of money had to be 200 times bigger, and the chances were zero. It wouldn't succeed.

But here, on the Internet, it is a giant village, where new thousands of members join in every day ! you CAN'T lose !!!!

Remember- read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE REASONABLE AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK FOR YOU ALL, And remember, play fair and you'll win, I don't want to mention what might happen to those who won't. AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED FOR A LONG TIME !!!

1866. Q? on earlier SAREX packet robot contacts

Newsgroup: rec.radio.amateur.space
Date: 1996-09-21 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>

Hello, and thanks for reading this.
Is there a place on the net to obtain lists of contacts that made it into the list of the Shuttle packet robot on earlier shuttle missions? (For those unaware, there is no packet on the current STS-79 mission, only 2m FM voice contacts.)

Yes, the Russian space agency will QSL all MIR contacts. I have two QSL cards from the MIR. One for a packet contact back in '93, and the other for an FM voice contact with Shannon Lucid in April of this year. I have the mailing address around here somewhere and will e-mail it as soon as I'm able to locate it.

> Chuck KD9JQ

According to my manual, the FT-736R output is 25 watts on 2 meters and
70 CM. The 6 meter module is rated at 10 watts. These figures are
about what I get when using FM, however, the reading on SSB is much
lower (yes, I am using a peak reading watt meter)

Shannon _WAS_ legally "licensed" to use the amateur radio aboard the Mir space station. I would be rather arrogant to asume that the FCC's authority extends to the Mir space station, or for that matter to any American outside of the U.S. territorial limits.

The Russian amateur radio regulations (which apply aboard the Mir space station) permit anybody aboard Mir to use their amateur radio equipment, with the station call R0MIR. It was quite legal for her to use the radio to communicate with any licensed ham on Earth.

John Blaha earned the license KC5TZQ specifically because of his Mir mission, although he did use SAREX (with a licensed control operator) on his previous mission, STS-58. During the preflight press conference he stated "I think the SAREX and amateur radio is a tremendous capability with the spaceflight. I'm looking forward to using it on Mir to talk to people all over the world when we have some free time, and telling them what we're doing on the flight and answering any questions they may have. I think it's a tremendous capability."

John Blaha is a ham, KC5TZQ, he was active on the flight up to Mir. He seems like a real interesting guy, but I'll bet he is going to be very very
busy. I expect to hear him on though.. There are plans afloat to get Mir involved in some "official scheduled " school contacts though I would
think Valeri Korzun, Flight Commander, will participate in those as he speaks English well and has been very active on the radio so far..
The packet radio has been on, but has been jammed up pretty good by people sending connect requests at improper times.. but some
messages are still getting through.. 73 DAVE

>Does anyone know if cards are available for Mir QSOs?

Hi Bob,

No no no, it is not necessary to QSL to the Russian Space Agency for a
MIR QSO, used to be, but not any more.. To QSL for a MIR contact
(phone or packet) simply send a SASE and your qsl info to:

DAVID G LARSEN N6JLH
P. O. BOX 311
PINE GROVE, CA 95665

He is handling QSL's for the MIR. Makes it real nice too, no more
waiting a year for a QSL out of Russia.. This info is straight from
the ARRL..

Congrats on your contact and 73's

de John KB7VZL

1880. Radio Interview on CHUO FM 89.1 Ottawa, Canada

Newsgroup: rec.radio.amateur.space
Date: 1996-09-22 00:00:00 UTC
From: robbie@cyberus.ca
Message-ID: <523udn$q6q@cybernews.cyberus.ca>
Source record: 21453

I have a "regular" segment on CHUO FM 89.1 U of Ottawa Community Radio that features a focus on leisure activities people indulge in. I would like to interview people who are into amateur radio. My show will be about 15 mins, including a short interview. If your in the Ottawa area, would you like to further your hobby and volunteer for an interview? I'd like to interview people that have something a little out of the ordinary to speak-on...something that our listeners would find amusing. If you send in some text, instead of an interview, I'm sure I might make use of your material. It's fun, I have fun volunteering for this, and others would be interested in hearing what you have to say. Please e-mail me at robbie@cyberus.ca
Thanks!, and hope to hear from you!
Robbie (ve3zzr)

1881. Sat. gear 4 Sale

I am listening to it in real time right now on 7.18530 mHz on the 40
meter band. It's also broadcast by WA3NAN on 14.29540, 21.39540 and
28.650. As I write this the shuttle just un-docked from MIR. WA3NAN
transmits from Greenbelt, MD so point your beam about 100 degrees from
Seattle.

Also, Houston Chronicle Interactive has links to NASA audio using
REALAUDIO through the internet that runs about 17 seconds off from real
time.

1883. Any info on JAS-2?

Newsgroup: rec.radio.amateur.space
Date: 1996-09-24 00:00:00 UTC
From: mds@lexis-nexis.com
Message-ID: <527h2n$gn7@mailgate.lexis-nexis.com>
Source record: 21456

I understand in mid August JAS-2 was placed in orbit. What is the latest information on this bird. I checked the web site, but no new information, i.e. Keplerian elements, OSCAR designation, or operation status.

Anyone have any updates?

Mike Suhar

1884. NORAD Two-Line Orbital Element Set: Space Shuttle (96266.70503952)

Newsgroup: rec.radio.amateur.space
Date: 1996-09-24 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <527gsg$295@blackbird.afit.af.mil>
Source record: 21457

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

The University of Cincinnati ARC will hold its first meeting during the 1996-1997 school year on Wednesday, October 9. We look forward to seeing some new faces (ok, and the old ones too...)

The club has resources for all hams, as well as scanner/shortwave enthusiasts.

If you would like to contact me, you can phone me at 556-7685 or the clubstation at 556-9899 (when the phone is working...) You can also page me at589-9822 or email me: lewse@email.uc.edu

We maintain an E-mail list to keep former/present/potential/future membersup to date on club activities. If you would like to be added, just say/type the word!!

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

1892. NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

Newsgroup: rec.radio.amateur.space
Date: 1996-09-24 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <529pq8$c65@blackbird.afit.af.mil>
Source record: 21465

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

All,

I am looking for transverters in general, but primarily at 220mhz trasverters. A company called Microwave Modules made some a few years back. I have a 440mhz version and would like to find some working one. Again, I am looking for all freqs with a focus on 220mhz. Please email to ne1h@ne1h.radio.org or reply to this posting. There may be others that will work the requirement is 10mtrs/220mhz or 10mtrs/other freqs. I need the downcovert side to be 10mtrs.

Thanks,
Alan K. Adamson

Errol,
Try this, I think its the one you are looking for:

http://seti1.setileague.org/homepg.html

It's the home page for the Seti League. This is from the Aug. 95 issue of QST. I heard Exc. Dir. , Paul Shuch, N6TX, give the first presentation of the Seti League at the Society of Amateur Radio Astronomers National Convention in 1995. I belong to SARA and SETI is an aspect of Radio Astronomy. Check SARA's homepage out also. Use a search engine and feed it SARA. You might even try SETI. There's a lot out there....maybe more than we know.

Good Luck!

Doug

Errol:

The URL is http://seti1.setileague.org/homepg.html. If you loose it
again, just search uneer SETI (search for extra-terrestrial
intelligence).

>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Last thin I heard RS-12 is only operating 15 meters up and 10 meters
down. RS-10 and 15 is only operating 2 meters up and 10 meters down.
I'm not 100% about this but my own experience confirms this

1901. Re: Unamsat

Newsgroup: rec.radio.amateur.space
Date: 1996-09-25 00:00:00 UTC
From: John DiStefano <ke3su@amsat.org>
Message-ID: <01bbab02$47ab17e0$7c0667cf@omni2.voicenet.com>
Source record: 21375

Arlon, here is a copy of a message sent to the Amsat-BB from David XE1TU.
73 de John KE3SU

As I had promised, here is the list of frequencies at which UNAMSAT-B
will operate:

Downlinks:

UHF TX1 437.206 MHz
UHF TX2 437.138 MHz (secondary).

Uplinks:

VHF CHA 145.815 MHz
VHF CHB 145.835 MHz
VHF CHC 145.855 MHz
VHF CHD 145.875 MHz

The modulations are the same as in the previous microsats.

On board we have also a 40.997 MHz pulse transmitter and a wide band
receiver centered on the same freq. that will be looking for echoes
produced on the ionized trails of meteors as they enter the atmosphere.
You could use this signal to get echoes from meteors in your area when
UNAMSAT-B is passing below your horizon.

Polarizations are exactly the same as in PACSAT and all the equipment you
have to work the existing microsats will work with UNAMSAT-B.

Saludos

David xe1tu
UNAMSAT.

> Mike
> KB0RLO
> KB0RLO@juno.com

I'm afraid you have that backwards. RS-12 is operating (at least the
last time I checked) in mode KT, which is 15m uplink, and simultaneous
10m and 2m downlink:
From the AMSAT web page:

Linear Transponder:

Note: Satellite RS-12 is presently active in Mode KT
(simultaneous downlinks on both 10 meters and 2 meters)

Mode KT Uplink: 21.210 - 21.250
Mode K Downlink: 29.410 - 29.450

Mode T Downlink: 145.910 - 145.950

Now RS-10, on the other hand *is* in mode A:

Mode A Uplink: 145.860 - 145.900 MHz
Mode A Downlink: 29.360 - 29.400 MHz

Hope that helps.
73,

Hi.

Special Discount for rec.radio.amateur.space readers!

Take an extra 20 percent off microwave compenents;
filters, attenuators, waveguide, couplers, etc. until
the end of September off our very low prices.
30 day money back guarantee, as always.

http://www.valuerocket.com/microwave.html

I have been building a microwave lab, and have extra
gear to sell. Limited Quantities.

Tim

THE GRAND RAPIDS AMATEUR RADIO ASSOCIATION
Presents

SUPER SWAP '96
Saturday, Sept. 28, 1996
At Unity Cristian High School in Hudsonville, MI

Seller setup at 6AM, General entry at 8AM.

Buy and sell new and used Amateur and Computer
equipment and Software. Pick up that bargain
you have been waiting for. Sell or trade that
equipment that is just laying around the shack.

Tickets are $4 in advance 5$ at the door. Tables
are $8 each. Make sure to reserve yours, they are
selling fast.

Directions: Unity Christian High School is located at
3487 Oak St. in Hudsonville, MI. From M-21 (Chicago Dr.)
Head north at 32nd Ave, Turn left to Oak St. From
I-196, use Exit 62 at 32nd Ave, Go 1.4 Miles to Oak St.
and turn left to the school.

Talk In 147.260 & 444.4 CTCSS 94.8 The W8DC Repeater

For advance tickets or table reservation contact,
GRARA, C/O SuperSwap '96, PO Box 1248,

1905. Re: HELP! Is shuttle audio available in Seattle?

Newsgroup: rec.radio.amateur.space
Date: 1996-09-26 00:00:00 UTC
From: daniel@securicor.co.nz
Message-ID: <52cj5u$89t@wnnews1.netlink.net.nz>
Source record: 21378
Cross-posted to: sci.space.shuttle,rec.radio.amateur.space,rec.radio.amateur

: The best thing to do is get a local amateur radio club to retransmit the
: shuttle audio via a local repeater, and even better would be to also
: transmit amateur television.

I have been trying to pick up the various HF re-transmissions of mission audio, without success. (Since I'm in New Zealand, obviously the 2m retransmissions in the US are not an option. ;-)

I have consulted all the FAQs, I'm aware of the frequencies for various sites and the limitations the re-transmissions work within (local weather, volunteer operator avilability, crew sleep times, etc).

What I would like to know, is when (generally) are these stations on the air? From past experience, can anyone tell me when the best mission audio is broadcast? (Obviously launch and landing times are good possibilities, but what about the days in between?).

I guess a significant factor would be the interaction between local hours (oerator availability) and crew waking/work hours (times of maximum activity).

I'm hoping that someone who has operated, or heard, these broadcasts could provide an indication like "We tend to operate between 4pm and 11pm CST during missions", or "I've heard the best stuff at around 9pm EST" or "We operate 24 hours during missions".

I'd appreciate any information, and if you could tell me which station you are referring to that'd be great. It wouldn't hurt to confirm frequencies, but I believe I have all of those already.

And I'd like to thank all those who participate in Shuttle audio broadcasts, I'm sure you do a terrific job ... and I'd like to be able to hear you! :-)

: If it doesn't exist - don't complain about it - do something about it.

I'm probably outside the footprint of the necessary sattelite(s), but maybe something on this side of the world carries NASA TV/audio?

I am a *complete* newbie in the area of receiving sattelite transmissions (I'm well-versed in HF/VHF/UHF radio, scanning, DX, SWL, etc) and I'd like to give it a go sometime. Can anyone point me at some good resources and information for people wanting to get into this? What do you need? Dish? Special receiver? What does all this stuff cost? Where can you get it etc? I'm sure these must be FAQs on a list somewhere ...

(Perhaps mail would be better, as I'm straying off topic a bit).

Thanks,
Daniel.

1906. VHF DX Opportunity

Newsgroup: rec.radio.amateur.space
Date: 1996-09-26 00:00:00 UTC
From: Mark Gingrich <grinch@rahul.net>
Message-ID: <52cktd$a6m@bug.rahul.net>
Source record: 21379
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.space,rec.radio.amateur.misc

On Thursday morning, 26 September, around 8:12 a.m. EDT (12:12 UTC), the Space Shuttle Atlantis (STS-79) is expected to touch down at Kennedy Space Center. About 25 minutes prior to landing, as it crosses the coast of British Columbia, the orbiter will experience sufficient atmospheric friction to create an ionized wake, a condition persisting for nearly fifteen minutes as the craft streaks like a meteor over the southern extremes of Alberta and Saskatchewan, through central North Dakota, and buzzes the cities of Minneapolis, Madison, Chicago, and Cincinnati.

DXers working VHF frequencies -- TV, FM, 2-meter, and 6-meter ham bands -- who reside within a thousand miles of all but the easternmost re-entry track will have a rare opportunity: the Shuttle-generated plasma trail may enhance reception of over-the-horizon signals, much like meteor scatter. Meteors, known to be just pea-gravel-sized flotsam colliding at high speed with Earth's atmosphere, create narrow ionized columns for a few seconds; in contrast, the near-airliner-sized Shuttle should cut a much larger plasma swath over an interval of minutes. Such temporary plasmas redirect very-high-frequency radio signals over the horizon, whereas reception usually is limited to line-of-site distances from the transmitter. Shuttle plasma effects may persist for as long as a few minutes.

DXers should tune to a known distant station in the general direction of the Shuttle's re-entry track -- that is, if you are south of the track, try for a northerly station, on an unoccupied, interference-free frequency in your area. The following Web site may assist you in finding candidate U.S. FM stations, their frequencies, and transmitter power:

http://www.airwaves.com/fmdb.html

- Re-entry Time Line -

If the re-entry goes as planned, the time line is as follows:

Event Time UTC EDT CDT MDT PDT

Arrives British Columbia 11:48 7:48 6:48 5:48 4:48

Overflies Calgary, Alberta 11:51 7:51 6:51 5:51 4:51

Overflies Fargo, ND 11:54 7:54 6:54 5:54 4:54

Overflies Chicago, IL 11:57 7:57 6:57 5:57 4:57

Overflies Cincinnati, OH 11:58 7:58 6:58 5:58 4:58

KSC Touch down 12:12 8:12 7:12 6:12 5:12

More detailed predictions (containing "look angles" at best visibility
for various locales) are available at the end of the document found at:

http://shuttle.nasa.gov/sts-79/orbit/orbiter/sighting/sighting.html

Note that only observers west of Minnesota will have a decent chance
at visually sighting the Shuttle, due to lessened interference from
sunlight/twilight. The sonic boom, however, may be detectable to
everyone in the vicinity of the re-entry track; be aware that it occurs
a few minutes *after* the Shuttle's closest approach to your location.

- Last-Minute Sources of Information -

Weather conditions at Kennedy may cause last-minute postponement of
the landing. The following Web site provides weather status:

http://www.ksc.nasa.gov/weather/weather.html

Last-minute information about the Shuttle's re-entry/landing status
is available at:

http://shuttle.nasa.gov/

Also, last-minute schedule changes are usually reported on the hourly
national news (e.g., CBS Radio affiliate stations, CNN, etc.) and on
NASA TV.

I would be especially interested in receiving successful (or even un-
successful) reports of DX catches made possible by Shuttle plasma scatter.

Good luck!

Space Bulletin 015 ARLS015
From ARRL Headquarters
Newington, CT September 26, 1996
To all radio amateurs

SB SPACE ARL ARLS015
ARLS015 SAREX a success

The space shuttle Atlantis has returned to Earth. The three hams aboard the shuttle--Jay Apt, N5QWL, Carl Walz, KC5TIE, and John Blaha, KC5TZQ--spoke with students at two schools in the Midwest and a third in England during their mission, which ended Thursday, September 26. Blaha replaced Shannon Lucid aboard the space station Mir, where he'll spend 120 days. Lucid had been living on Mir for the last six months. The shuttle had docked with the station last week to make the exchange and to drop off food, water, equipment and supplies at Mir.

STS-79 carried the Shuttle Amateur Radio EXperiment (SAREX) payload in configuration M (voice-only operations).

While still docked with Mir, the Atlantis crew successfully completed three prearranged SAREX contacts. The first was on Friday, September 20, with Immaculate Conception Elementary School in Celina, Ohio. Pupils there made a very successful SAREX contact with astronaut Carl Walz, KC5TIE. Eleven-year-old Steven Eizensmits, KC8ENC, of Mendon, Ohio, initiated the 6 1/2-minute contact, and pupils got answers to nine questions as some 400 of their classmates and media representatives looked on (9 TV and cable stations, 2 radio stations and one newspaper sent reporters). Also among the crowd were the mayor of Celina and a couple of members of the Ohio legislature. After the contact, the pupils got a congratulatory telephone call from retired astronaut and US Sen John H. Glenn Jr--the first American to orbit the Earth.

Crew members spoke with two schools on Sunday, September 22. Students at the Royal School For Girls in Haslemere, Surrey, England, got answers to four questions during the QSO. Audio quality was reported as ''somewhat poor,'' but students thought the event was ''pretty keen.'' Some 150 people showed up for the occasion,

including representatives from the BBC and local television.

The last SAREX contact was with Andover Middle School in Andover, Kansas. Students and administrators at the school called the contact a ''once-in-a-lifetime'' opportunity. Audio quality was adequate, and students asked a couple of dozen questions, most of them fielded by Jay Apt, N5QWL. At the school itself, some 200 people and media representatives turned out.

After the Kansas contact, the crew members turned their attention to personal contacts. The ARRL has received dozens of reports from amateurs who made successful contact with the crew throughout the mission. We even got reports from hams in Canada and Finland. After Atlantis and Mir separated, John Blaha, KC5TZQ, was heard working ground stations on the East Coast on 145.55 MHz. ''Good strong signal as Mir passed over Knoxville,'' reported Greg Williams, KE4HSM.

Send STS-79 QSL cards and reports to: ARRL EAD, STS-79 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-79, date, time in UTC, frequency and mode. Include a stamped, self-addressed business-size envelope if you wish to receive a card (non-US stations should include one IRC). The Bergen Amateur Radio Association in New Jersey has graciously volunteered to manage the mailing for this mission.

Space shuttle Columbia will carry the next SAREX payload, during mission STS-83 in March, 1997.

>down. RS-10 and 15 is only operating 2 meters up and 10 meters down.
>I'm not 100% about this but my own experience confirms this

RS-12:
They (whoever 'they' are) turned on the 2 meter DOWNLINK almost a year
ago but I haven't checked it in a couple three weeks or more.
No, you won't hear yourself on 10 meters because you are
supposed to be listening there or on 2 meters and transmitting on
15 meters with the appropriate license, whatever that is.
I find that the 2 meter downlink is much more strong and clear than
ten meters and I didn't even bother with it before 'they' switched
on two.

RS-12:
29.407 beacon, tune up for activity
145.98x same thing only clearer

21.225 Mhz or abouts. Transmit and find yourself.

This is from memory, can't find my list.

Notes
-----
1. NORAD Catalog Number is also known as U.S. Space Command (USSPACECOM) object number and NASA catalog number.
2. No orbital plane position = satellite no longer operational.
3. Clock: Rb = Rubidium; Cs = Cesium.
4. Selective Availability (S/A) had been enabled on Block II satellites during part of 1990; S/A off between about 10 August 1990 and 1 July 1991 due to Gulf crisis; standard level re-implemented on 15 November 1991; occasionally off for test and other purposes. Currently, PRN15 and PRN28 appear to have little or no S/A imposed.
5. Anti-spoofing (A-S) was activated on 94-01-31 at 00:00 UT on all Block II satellites (ref. NANU 050-94042); occasionally off for test and other purposes. A-S was turned off on all satellites at 20:00 UT on 95-04-19 and back on on 95-05-10; off again between 95-06-19 and 95-07-10; and between 95-10-10 and 95-10-31. A-S has been off on PRN28 since 95-02-21.
6. PRN number of SVN32 was changed from 32 to 01 on 93-01-28.
7. The active clock on PRN01 was switched from a Rb to a Cs between 96-08-16 and 96-08-22 (ref. USNO and NANUs 134-96229 and 141-96234).
8. PRN05 and PRN06 are equipped with corner-cube reflectors for satellite laser ranging (SLR). SLR tracking of the satellites will permit onboard clock errors and satellite ephemeris errors in GPS tracking to be differentiated.
9. The decommissioning date for PRN06/SVN03 is the date of termination of operations of this satellite (ref. USNO) and is about 3 weeks later than other published dates for "deactivation".
10. PRN16 will be moved from the E-3 slot to the E-5 slot to make room for PRN10. An orbit maneouvre was carried out on 96-08-19 (ref. NANUs 120-96204, 137-96232).
11. PRN20 hs been unusable since 15:18 UT on 96-05-10 and will not return to service (ref. NANU 118-96204). Cause of failure: loss of 3-axis stabilisation. PRN20 was moved out of the B-2 slot to make room for PRN30 (ref. NANU 162-96256).
12. PRN28 has been moved from the C-2 slot to the C-5 slot, about 40 degrees away. This move, which was initiated on 96-03-06 by lowering the orbit of PRN28 by about 6 km, made way for PRN03. PRN03 is a backup for PRN28 which has some undisclosed equipment problem. PRN28 will remain on the air, with some subsystems shut down to conserve power (ref. NANUs 045-96066, NANU 068-96100, and GPS World Newsletter). The move was completed on 96-08-23 (ref. NANUs 127-96236 and 144-96236).
13. PRN30 (SVN30) was launched on 96-09-12 at 08:49 UT.
14. Announced date of next scheduled launch: 97-01-13 (first Block IIR

satellite).

Is it me or is there a problem with getting colors set
in winorbit? I'm using version 3.0 alpha 3 and the colors
seem to change for any except the map (continents and oceans)

Thanks and 73, Tom Kenny KB2GLO

Hi !

RS-12 is running since some months in mode KT.

Mode K = 15m up / 10 m down
Mode T = 15 m up / 2 m down

That means that you can hear the downlink on two bands
(10 and 2 m) the same time. The 2 m signals are very strong
even with my simple groundplane antenna....

Good luck !

John's call is KC5TZQ. He is a Tech licensed earlier this spring. You will
probably start hearing from him after he has a chance to settle in.

Guys, I worked someone on FO-29 (the permanent name for JAS-2) a few weeks ago. Unfortunately, I hear that NORAD seems to be having trouble getting accurate keps for it. I tried monitoring it tonight and heard nothing (it's Sept. 28th, and I tried to monitor a pass at about 5:20 UTC). Most of the time, when I listen for it, I hear nothing, and I think this is because of bad keps. At any rate, when I have heard it, the analog transponder has been on and the signals have been excellant.

1920. (I think) that I finally made a Mir packet contact.

Newsgroup: rec.radio.amateur.space
Date: 1996-09-28 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <324CB791.38EF@ix.netcom.com>
Source record: 21393

Tonight I finally made my first Mir contact (have been trying for nearly 3 years, since I was first licensed and found out about Mir.)

Anyway, I connected to R0MIR, which I assume is like a keyboard-to-keyboard connect, and not to the R0MIR-1 mailbox. I sent a couple of short lines of text, then disconnected. Does anybody know if this type of connect qualifies me for a QSL card? This is the one card that I am dying to get, more so than any of the other HF DX contacts I have made.

On a similar topic, who was that QSL manager for Mir, I think it was N6-something-or-other. Is he still the manager?

Regarding the earlier question about Mir on amateur radio, I think that they have been more active in the last couple of days than they were in the last 6 months. Two days in a row, I was able to hear them calling CQ on voice, including John Blaha using his own call, then handing the mike over to the Mir crew, who used R0MIR. Unfortunately, I wasn't able to bust the pileups for that, but I will keep trying :-) I heard from another local ham that he made a contact with John Blaha on the Mir radio while the Shuttle was still docked :-)

Looks like Mir is back, and QRV more than ever :-)

Dear OM:

Congratulations on your MIR contact. I have had a keyboard to keyboard QSO with MIR as well (your connection is sufficient IMHO for a card). One thing I have learned the hard way about connecting to MIR's packet station is to give my TNC the "PASSALL" command. This will cause my TNC to display all packets received, even if there are some errors in the data received at my station. Given MIR's relatively short period of availability on a pass, it's a good idea.

The QSL manager for MIR is as follows:

Don Larsen, N6JLH
P.O. Box 1501
Pine Grove, CA. 95665

Don would appreciate it if you sent him an SASE when you QSL. If you have questions, you can e-mail him at the following address:

docdave@ix.netcom.com, or docdave@inrech.com

1927. KC5TZQ and R0MIR active

Newsgroup: rec.radio.amateur.space
Date: 1996-09-28 00:00:00 UTC
From: BJ ARTS <bjarst@uslink.net>
Message-ID: <01bbad25$c454af20$15bc92ce@bjarts.uslink.net>
Source record: 21400

This morning passes have been very active from MIR. R0MIR and KC5TZQ have both been on. John KC5TZQ was on during the 1000 UTC pass over north America. Both KC5TZQ and R0MIR have answered stations calling CQ when the packet station was running. It seems as if the crew will answer a CQ if the heard it and are near the radio.. Good luck making a contact with the space station.. 73 de BJ WT0N

1928. RS-12

Newsgroup: rec.radio.amateur.space
Date: 1996-09-28 00:00:00 UTC
From: kb0rlo@juno.COM
Message-ID: <19960928.141127.3806.0.KB0RLO@juno.com>
Source record: 21401

Thanks for all the help with RS-12. My satellite tracking program(STSorbit+) gave the following up- and downlink freqs. for RS-12

uplink downlink
21.2300 29.4308
21.2300 145.9360
145.4300 29.4300

Apparently it's only working in the first two modes. I was trying to uplink on 2 Meters because I only had a Tech+ license. I just upgraded to Advanced today, so I can uplink on 15 Meters now. Thanks for all the help.

73's
Mike

1929. FO-29 - WHERE IS IT?

Newsgroup: rec.radio.amateur.space
Date: 1996-09-28 00:00:00 UTC
From: "Bernard A. Poskus and Cheryl A. Blehm-Poskus" <hamdan@ix.netcom.com>
Message-ID: <52kb9m$d68@sjx-ixn5.ix.netcom.com>
Source record: 21402

Hello all, and thanks for reading this message. Are we getting good keps for FO-29. I have heard it on several occasions, loud and clear, and have had one QSO on it (have heard myself on the downlink more than once, quite clearly). However, frequently, when my computer tells me it should be passing overhead (I am in Denver, grid: DM-79), I just don't hear it at all. My computer is accurate for all the other satellites. I've heard that NORAD has had a problem differentiating it from its booster and has given wrong keps for it on occasion (I get my keps from the AMSAT mailing list). Is anyone else having this problem, or perhaps is FO-29 being shutdown at times while it is in its shakedown period?

An answer would be appreciated because this is driving me crazy (it's a short drive).

Subject: New Qsl mgr for USA
Path: WA1WOK!WB1DSW!K1UGM!WG1I!KA1RCI!N1OKK!N4GAA!WB0TAX ...

I have been granted the privilage from Sergji [RV3DR]
to become the MIR QSL mgr for USA only hams , If you
have worked MIR.

I need the Date, time , mode .
SASE

Send to

N6JLH
POB 1501
Pine Grove Calif.
95665

Please make sure you send a SASE.

Dave N6JLH
Dave Now would like a green stamp to help cover postage even with a sase, but a small cost for a great card... should be two tone this time..
congrats on your contact I don't know if it qualifies, but give it a shot, I guess Dave makes the rules about that..
John and Valery certainly have been active, keep trying and I am sure you will get your voice contact, please urge everyone to keep the freq
uncluttered for those whose callsigns they hear and answer.. in other words try not to interfere with transmissions that are going on..the
cosmonauts are enjoying the amateur radio, lets try to keep it this way, if they hear nothing but interference they are apt to shut if off, like they
have in the past and no one will make contacts. Try to have some news or information to pass them that they would like and they will more likely
remember you and catch your call quicker the next time...
my friend Jay WB9AWX works Mir regullarly with 20 watts and a 4 element beam...so keep trying, and enjoy....

I didn't hear a peep from the docked pair so your friend was very lucky..

You qualify, I got mine that way. N6JLH is the manager: Dave Larsen,
P.O.Box 1501, Pine Grove, Calif. 95665

It took me a few months to get my first. The last crew did not like using the
radio gear. The new crew seems to really love it. I know John Blaha like to
get on a lot. Congrats and let's hope we both get a voice contact soon!

Hi Mark,

MIR's packet is on 145.550MHz (simplex) as is voice. The call is
R0MIR-1 for the packet box, and you can use that call when trying for
a voice contact. John Blaha has a call, but I can't remember it off
the top of my head. Hope this helps..

1938. DX and Satellite Cyberscheds available at http://www.sarrio

Newsgroup: rec.radio.amateur.space
Date: 1996-09-29 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-2909962317530001@host38.cyberg8t.com>
Source record: 21411

Posting Cyberscheds on the WWW can benefit ham radio operators throughout the world with their DX and Satellite schedules.I already have a couple of operators looking for scheds via ham sats.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site for hams to post their request for over-the-air schedules. Included in the posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

1940. questions from a beginner

Newsgroup: rec.radio.amateur.space
Date: 1996-09-30 00:00:00 UTC
From: chapman@cedar.eng.auburn.edu
Message-ID: <52p394$t6n@ultranews.duc.auburn.edu>
Source record: 21413

Hello all,
I hope someone can answer a few question from a beginner at
using amateur radio satellites. The sum total of my previous
experience was listening to AO-21 on 2m (j-pole antenna) back in
1992-3 (I used a program called sattrack on a Sun workstation to
predict the satellite's location). I've read the AMSAT homepage, which
mentions AO-21, but read on another web page that it ceased to be
operational in 1994. Is this correct? I recently ported sattrack to
run under linux, and got a new set of elements from ftp.afit.af.mil,
but I may have made errors and may not be listening at the right time --
I have been unable to receive AO-21 this time.

I'd like to get started, but am not sure in practical terms what to do
first. The equipment I have is:
2m handheld (FM only)
2m 45W mobile (FM only)
2m 5/8 wave ground plane antenna
440Mhz 5/8 ground plane antenna
2m j-pole antenna
2m quad antenna
Drake TR4C HF rig and various dipole antennas
scanner that receives the 440Mhz band.
Baycom packet modem, computer and software
sattrack satellite tracking program

I'm reasonably handy at building antennas if I have instructions, but
don't know enough to design them from scratch. I've done terrestrial
packet before. I have no experience in having a computer control a directional
antenna's direction.

Now, the easiest thing would seem to me to be to try to work some of
the mode JA or JD satellites, since I have a 2m transmitter and a 70cm
receiver. But which one? I understand that AO-27 has a very weak
downlink, so I guess my first step is to build a good directional
antenna for 440Mhz. I'm also planning on listening for MIR on simplex,
and perhaps packet if I can get my setup to receive any packets from
MIR. Another option is FO-20, but it seems to require antennas more
complex than anything I've used (switchable polarization crossed yagi)
and seems in general rather complex to use. Can anyone recommend a
satellite to start out with?

Also, if I were to buy/make some more equipment, what would be the
most productive things to add.
Thanks,
73 de KC4IFB

```
The Western North Carolina APRS Home Page
-----------------------------------------
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Burns (who wishes he had a place for a Big Ugly Dish)

> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a

couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design it's out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steve's Shareware of the Day WINner's will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of What's So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Well folks it's that time of the year again. Puzzled?, confused? Thinking that this fellow has fallen from his rocker and can't get up. Nope, it's time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on all the analog birds, especially AO-13. It will be held the third weekend of this month starting at 0001 Saturday going until 2359 Sunday. All times are local and there will be some activity starting Friday afternoon and finishing Monday morning because of DX. If you want more info or set a sked, e-mail me.

From: aikido@magicnet.net
Message-ID: <3250b8d9.200789108@news.magicnet.net>
Source record: 21417

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

I just worked R0MIR as the MIR space station passed over the USA during the
0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ
was busy with an experiment at the time. Alexander told me the conditions
are nice and warm on MIR. Temp between 70 and 75 degrees F and they have
having lots of fun.

1953. An open gripe letter to N6JLH (again)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-01 00:00:00 UTC
From: rb@cyberhighway.net
Message-ID: <3250c655.17509248@news.cyberhighway.net>
Source record: 21419

When I got my Amateur Radio License a few years ago, my primary interest was in packet radio and space communications. Probably the single biggest thrill in my otherwise dull life was to have a few QSO's with Dr. Norm Thaggard while he was onboard the MIR. Besides my voice contacts with the doctor and a few SAREX voice and packet contacts, I really enjoy logging onto the MIR packet BBS (or at least trying to) and read and leave messages. Unfortunately, I happen to share the MIR's "radiological footprint" with N6JLH and therefore am RARELY blessed with a "******CONNECTED TO R0MIR-1" on my screen.

What does N6JLH have to do with my ability to connect to the MIR? I would like an answer to that question myself! What I do know is this, for the last several years I have been trying to (as well as several local licensed friends) utilize the packet bbs that is on-board MIR for the use of all licensed amateur radio enthusiasts, but for the same amount of time I have been seeing N6JLH connected to the pbbs on MIR 99.9% of every pass that I have monitored in the last couple of years. One could say, "perhaps N6JLH is just lucky, has lots of power and great big antenna's." perhaps that is true, BUT, I now believe that he has more than just luck, more than just high power, more than just big antenna's, this SOB has managed to get the packet pbbs onboard the MIR configured to DUMP (forcefully log off) anyone who happens to be connected to it when N6JLH makes a connect! I ask you, is this fair? No, it certainly isn't. And I am royally peeved about it.

I made this comment several years ago on a packet message to allUSA, MANY replies came back saying that this isn't possible, N6JLH has no more chance of connecting to the MIR's pbbs than anyone else. For a long time I reluctantly believed that, now I say BS! Time after time after time I would connect to the MIR's pbbs (when I was fortunate enough to have the MIR pass from the direct north before it got over N6JLH) and the very second that N6JLH would make a connect attempt, the pbbs would immediately drop my connection and just as fast, connected to N6JLH! This isn't just once or twice, DOZENS of times this has happened. One might say, "Oh, John, thats bologna," well, this evening I decided to capture the scrollback of another pbbs attempt, have a look for yourself!

You have mail waiting.
R0MIR-1>N6JLH [09/30/96 23:52:18]:
-----------------------------------------
```

Note that only six seconds have elapsed from the time the pbbs sent me the menu to the time that I was disconnected and N6JLH was connected. Amateurs who know packet know that several retries have to be sent before the pbbs will time out a connection, taking LOTS longer than 6 seconds! Also, MIR's pbbs was nearly full scale at the time I was given the axe by N6JLH. No, I refuse to believe that MIR simply lost my signal and went on to the next connect request, do you see the pbbs sending a CQ?? No, you don't, because it didn't send one! N6JLH typed c r0mir-1 and hit return, the MIR heard it, executed some kind of quick log-off script to boot me off and log N6JLH on in my place. This has been the scenario for years! I have gone through this exact same thing over and over and over and frankly, I am SICK OF IT! As are many of my friends who also have to put up with N6JLH's monopoly of the MIR's pbbs.

I am very much aware that N6JLH is responsible for MIR's QSL cards for those who are lucky enough to live far enough away from him to manage a connection, but does this give him the right to TOTALLY MONOPOLIZE the pbbs on MIR for just about the entire west coast? I say no. But, he's been doing it for so long that I seriously doubt it will ever stop. Can't he just log on once per evening and leave the rest of the passes for others to enjoy a connection, it doesn't seem so. Has this man been duct taped to his chair in front of his packet station, he is ALWAYS there, every single pass! Is he using a script file to do his logging? Which would be even more rude than what he is already.

"But John, since he takes care of the QSL's for the pbbs he needs to log onto the MIR's pbbs many times to get needed information!"

B S, I have watched the messages that are sent to him and that he sends, 99.9% of them have ABSOLUTELY NOTHING to do with anything realted to the pbbs! Idle chit-chat, thats all..

N6JLH, I believe that you are a disgrace to the Amateur Radio Community, your "god-like" control over who connects to the pbbs onboard MIR is a power that I believe that no one man should posess, I think that your CONSTANT use of the MIR pbbs when others are either already online with it, or attempting a connect to it is extreamely RUDE and unfair to all of us who would enjoy even one connect every few weeks.

N6JLH, for heavens sake, TAKE A VACATION and let someone else log onto MIR, after all IT BELONGS TO EVERYONE, not just N6JLH. You truely take the fun out of this hobby.

To all of you reading this on the east coast, I swear on my Grandmothers grave that everything I have said is true and that this is what we put up with out west. I'm about this close to throwing this TNC into the river.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a

couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

From: tkelso@afit.af.mil
Message-ID: <52uv3t$4qj@blackbird.afit.af.mil>
Source record: 21330

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

1958. NORAD Two-Line Orbital Element Sets (TLE876)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-02 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <52uuvo$4q6@blackbird.afit.af.mil>
Source record: 21331

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

I'm all for getting rid of this! It's been on the newsgroup for weeks now!
I've sent several messages to the postmaster at the address it comes from.
But nothing seems to be done. Why? I don't think their people understand
what they are doing!

T>145.550 simplex for both packet and voice

There's also the SAFEX SPACE REPEATER onboard MIR. RR0DL

447.75 up 141.3 tone
437.95 down
437.925 beacon

I've never heard it, but that's what I have for the frequencies.

Peter,

I've placed the drivers on LogSat's home page. Just point your browser to
http://www.logsat.com/pub/kct.zip (~100K) to download them. I also scanned
in a few pages from the manual you might find useful during the setup.
Download them from http://www.logsat.com/pub/kct-doc.zip (~700k).

Good luck!

1963. SPACE FREQUENCY QUESTION

Newsgroup: rec.radio.amateur.space
Date: 1996-10-03 00:00:00 UTC
From: Gross <sgross@midusa.net>
Message-ID: <32537567.1F36@midusa.net>
Source record: 21336

Hi everyone,

My name is Jeff and I have a Pro-2026 100 channel scanner at home. I hear a lot about the frequencies used by the MIR station and the ham guys up there. I know one of the frequencies is 145.55 MHz. I have that and about 5 other nationwide "space" frequencies programmed into my scanner. My question is: why don't I ever hear anything on my scanner on those frequencies? Do they talk in the middle of the night or what? I've never heard anything on these frequencies and I was just wondering if anyone out here could give me an answer why. Thanks for your time, people.

Thanx,

Jeff G.

I have been granted the privilage from Sergji [RV3DR]
to become the MIR QSL mgr for USA only hams , If you
have worked MIR.

I need the Date, time , mode .
SASE

Send to

N6JLH
POB 1501
Pine Grove Calif.
95665

Please make sure you send a SASE.

Dave N6JLH
Dave Now would like a green stamp to help cover postage even with a sase, but a small cost for a great card... should be two tone this time..
congrats on your contact I don't know if it qualifies, but give it a shot, I guess Dave makes the rules about that..
John and Valery certainly have been active, keep trying and I am sure you will get your voice contact, please urge everyone to keep the freq
uncluttered for those whose callsigns they hear and answer.. in other words try not to interfere with transmissions that are going on..the
cosmonauts are enjoying the amateur radio, lets try to keep it this way, if they hear nothing but interference they are apt to shut if off, like they
have in the past and no one will make contacts. Try to have some news or information to pass them that they would like and they will more likely
remember you and catch your call quicker the next time...
my friend Jay WB9AWX works Mir regullarly with 20 watts and a 4 element beam...so keep trying, and enjoy....

I didn't hear a peep from the docked pair so your friend was very lucky..

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: DX and Satellite Cyberscheds available at http://www.sarrio

Posting Cyberscheds on the WWW can benefit ham radio operators throughout
the world with their DX and Satellite schedules.I already have a couple of
operators looking for scheds via ham sats.

You can now schedule contacts with hams all over the world simply and
easily by using the WWW and e-mail.I have set aside a section of my web
site for hams to post their request for over-the-air schedules. Included
in the posting is a place to list the posters specific ham radio contact
needs (countries, zones,IOTA, grid squares ect...). The postings will also
include an e-mail link that will allow hams that read the posts, to easily
request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero,
rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also
transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot
satellite dish (a real one, not one of the wimpy little dishes which
doesn't have NASA TV available). Any decent techie can scrounge together
the parts for a simple C-Band dish, recevier, and other components for a
couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

I hear them on a LOT now that the new crew is onboard. What power are you
using?

Subject: questions from a beginner

Hello all,
I hope someone can answer a few question from a beginner at
using amateur radio satellites. The sum total of my previous
experience was listening to AO-21 on 2m (j-pole antenna) back in
1992-3 (I used a program called sattrack on a Sun workstation to
predict the satellite's location). I've read the AMSAT homepage, which
mentions AO-21, but read on another web page that it ceased to be
operational in 1994. Is this correct? I recently ported sattrack to
run under linux, and got a new set of elements from ftp.afit.af.mil,
but I may have made errors and may not be listening at the right time --
I have been unable to receive AO-21 this time.

I'd like to get started, but am not sure in practical terms what to do
first. The equipment I have is:
2m handheld (FM only)
2m 45W mobile (FM only)
2m 5/8 wave ground plane antenna
440Mhz 5/8 ground plane antenna
2m j-pole antenna
2m quad antenna
Drake TR4C HF rig and various dipole antennas
scanner that receives the 440Mhz band.
Baycom packet modem, computer and software
sattrack satellite tracking program

I'm reasonably handy at building antennas if I have instructions, but
don't know enough to design them from scratch. I've done terrestrial
packet before. I have no experience in having a computer control a directional
antenna's direction.

Now, the easiest thing would seem to me to be to try to work some of
the mode JA or JD satellites, since I have a 2m transmitter and a 70cm
receiver. But which one? I understand that AO-27 has a very weak
downlink, so I guess my first step is to build a good directional
antenna for 440Mhz. I'm also planning on listening for MIR on simplex,
and perhaps packet if I can get my setup to receive any packets from
MIR. Another option is FO-20, but it seems to require antennas more
complex than anything I've used (switchable polarization crossed yagi)
and seems in general rather complex to use. Can anyone recommend a
satellite to start out with?

Also, if I were to buy/make some more equipment, what would be the
most productive things to add.
Thanks,
73 de KC4IFB

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a

couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Email jota@arrl.org

WHAT IS JOTA?

When Scouts want to meet young people from another country, they usually think of attending a World Jamboree. But few people realize that each year
more than 400,000 Scouts and Guides "get together" over the airwaves for the annual Jamboree-on-the-Air (JOTA). Modern technology offers Scouts the
exciting opportunity to make friends in other countries without leaving home.

JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur (ham) Radio. Scouting experiences are exchanged and ideas are shared via radio waves. Since 1958 when the first Jamboree-on-the-Air was held, millions of Scouts
have met each other through this event. Many contacts made during JOTA have

resulted in pen pals and links between Scout troops that have lasted many years.

With no restrictions on age or on the number of participants, and at little

or no expense, JOTA allows Scouts to contact each other by ham radio. The radio stations are operated by licensed ham radio operators. Many Scouts and leaders hold licenses and have their own stations, but the majority participate in JOTA through stations operated by local radio clubs and individual radio amateurs. Some operators use television or computer-linked

communications.

WHEN

JOTA is held the third weekend in October. JOTA 1996 will take place Saturday October 19, at 0001 hours local time to Sunday, October 20, 2359 hours local time, though some activity continues over from Friday to Monday

to take advantage of long distance (DX) time differences.

HOW DO WE TAKE PART?

First, contact a local Amateur Radio operator or club to ask for assistance. If you need help finding one in your area, contact the Educational Activities Department at ARRL HQ at (860) 594-0301. Radio amateurs are enthusiastic about their hobby and most will be willing to help you participate in JOTA. The radio operator may suggest that the Scouts visit his/her station or that the operator bring equipment to your local campsite. Often, JOTA stations are set up in unusual locations, such
as the top of a mountain, or on a boat. For free Girl and Boy Scout brochures, contact the Educational Activities Department at ARRL HQ.

LICENSING REGULATIONS

Ham radio operators have obtained a radio transmission license by passing an exam given by national authorities. License conditions vary from country

to country. In some, Scouts may speak over the air: in others, special permission can be obtained for Scouts to speak over the radio during JOTA.

RULES

Radio operators run their stations in accordance with their national licensing regulations.

Stations should call "CQ Jamboree," or answer stations doing so. Any authorized frequency may be used. It is recommended that stations use the agreed World Scout Frequencies, listed elsewhere in this document. To avoid

congestion, use close-by frequencies.

JOTA is not a contest. The idea is not to contact as many stations as possible during the weekend.

All participating groups are asked to send a report of their activities to
their National JOTA Organizer (NJO) and to ARRL HQ after the event. The NJO

for the US is Dan Dansby, W5URI (see addresses listed elsewhere in this document). NJOs forward national JOTA reports to the World Scout Bureau

for

the World JOTA Report.

Although the worldwide JOTA is organized in October, Scouts can meet on the

air at other times during the year. Regular Scout nets (a pre-arranged time

and frequency when operators meet) are organized nationally or regionally.
An updated list of these nets can always be found in the latest World JOTA
Report which is published in March.

HB9S

The World Scout Bureau operates its own Amateur Radio station, with the call sign HB9S. There is a permanent radio room in the Bureau's Geneva offices, and the station is regularly on the air during Scout nets and JOTA

weekends. Transmitters are on the 10/15/20 meter, 160/80/40 meter and (in the Geneva area) the 440/2 meter bands. Making contact with HB9S requires patience, as many stations call at the same time. Please follow instructions given by the operators and do not interfere with on-going contacts. They speak in as many languages as possible.

SCOUT STATION CALL SIGNS

Each licensed Amateur Radio station has a unique identifier known as a "call sign." The first letters specify the country. Here are call signs of
well-known stations that can often be contacted:

HB9S World Scout Bureau
Geneva Switzerland

K2BSA Boy Scouts of America National Office
Dallas TX

JA1YSS Boy Scouts of Nippon National Office
Tokyo Japan

PA6JAM Scouting Nederland National Station
Sassenheim Netherlands

5Z4KSA The Kenya Scouts Assoc. Paxtu Station
Nyeri Kenya

VK1BP The Scout Assn. of Australia National Station
Canberra Australia

GB2GP The Scout Assn.
Gilwell Park, London UK

XE1ASM Boy Scouts of Mexico

DU1BSP Boy Scouts of Philippines

JOTA PROGRAM ACTIVITIES

Before the event:
* Send a report of your plans to local news reporters. Ask them to visit the station.

* Ask a radio operator to talk about ham radio communications. Visit his/her station to actually see how it works. Learn about radio waves and their propagation.

* Learn to say hello in other languages.

* Learn about other countries and prepare questions to ask over the air.

* Design special QSL cards for the JOTA weekend. Find a way to print cards
or prepare different handmade cards.

* Build a suitable antenna and erect a tower. For ideas, refer to chapter 7

in "Now You're Talking!" available through the ARRL for $19, plus $4 shipping and handling.

* Build a simple radio receiver (send an SASE to ARRL for a list of kits).

* Learn about electricity and how to do simple electrical repairs such as how to fix a blown fuse.

* Learn and practice Morse code. Use a computer to teach the code. ARRL has

a computer program that helps teach code: GGTE Morse Tutor Gold for IBM or
compatible PCs.

* Practice talking into microphones using radio operating procedures and jargon--see examples.

* Find out about your local area in order to answer questions from Scouts in other regions.

During the Event:

* The global weather situation. Get a large wall map of the world. Ask the
Scouts with whom you speak to give the local weather. Mark it on the map for the area where they are located. At the end of the weekend you will have a global weather picture.

* Determine the distance between each radio contact that you made and add them all up. Can you reach 100,000 km (62,000 miles) in one JOTA weekend?

* Learn to say "Scout" in several different languages. Use it whenever possible.

* Invite parents and other friends to visit your JOTA station.

* Organize a weekend hike and take portable radio equipment with you.

* Ask Scouts to keep his/her own personal logbook. Include names, addresses

and other information for Scouts contacted.

* Set up an information section with maps, atlases and other sources. When
a contact is made, Scouts can find out details about the country or region.

* Plot contacts made on a world map.

* Invite the media to your station. Ask a newspaper to take photos.

* Organize a fox hunt, where Scouts have to locate a small hidden transmitter. This can include the use of a map and compass.

After the Event:

* Write to the Scouts contacted. Establish individual (pen pal) or troop links. Send your badge and other information about your area.

* Send your reports (and photos!) to the ARRL. Maybe you'll see your picture in our magazine, QST!

* Send a report to your NJO. He'll send his national JOTA report to the World Scout Bureau.

* Start planning for next year!

Is the packet system aboard MIR left on during voice QSO's ?

I keep hearing packet while voice is being sent from MIR and am not
sure if the packet is from a ground station or MIR.

I would THINK they'd turn the TNC off while making voice contacts!

Any info on this would be appreciated

Hi,

I'd be interested in hearing from anyone who is using or constructed
the Hamtronics R139 Weather Satellite Receiver.

I'm having trouble getting the RF amplifier FET, to amplifly signal.
All the oscillator circuit is tuned ok, I've replaced FETs but still
can't get gain. Has anyone else encounterd/solved this problem?

Any help is appreciated.

Peter, and group: you can use windows drivers found on the Amsat ftp site
with WiSP. That's my set here. I believe that there are DOS driver there
also that can be used with InstaTrack or QuikTrak. I'm not sure on that
set-up. I have never operated that way. If your operating with Windows 95
it will be a little tricky to set-up but it can be done.

Steve,

Different 2line keps files might refer to the same satellite using two different names. If the file you used to update the keps 3 months ago contained ao-10, and the one you used yesterday had oscar 10, Logsat is going to have both names: ao-10 with 3 month old elements, and oscar 10 with the new elements.

To erase all of the older satellites, just click on Satellites | Keplerian Elements | Delete Satellites. From there you can choose to remove all satellites with old elements (ex. 2 months). This will remove the older ao-10, and leave you with just oscar 10.

Also, if you look at the status line at the bottom of the screen, you will see there the age of the keps for the current satellite. This way you can immediately tell which one has the fresher elements betwenn ao 10 and oscar 10.

Brad,

My favorite source of satellite photos are those taken from the Space
Shuttle. Just go to:

http://images.jsc.nasa.gov/html/earth.htm

and click on search. You can then select photos either by just entering the
name of the place you're looking for (text search), or by selecting it
directly by clicking on maps (graphical).

You can also find a wealth of resources at:
http://www.hq.nasa.gov/office/pao/Library/photo.html

Hope you find what you need!

1980. Re: Is MIR packet on during voice QSO's ? (Yes andNO)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-04 00:00:00 UTC
From: dhend@cyberportal.net
Message-ID: <532qc4$gbj@news.monad.net>
Source record: 21353

The Mir packet station is designed to operate with the packet on or off, it was determined that it was possible to communitcate by voice
and not interupt a packet transfer , Alexander Serebrov told me this.......however in most practical situations it is turned off, as the packet
generally interferes with the voice contact, and if ground stations hear packet they keep right on hammering with conncect request
anyway.. obviously if ground stations followed the rules.. and listened before
transmitting they would either see someone else is connected
or hear the voice and not transmit packet, but clearly this does not happen.
I saw a station timing out last night (a long series of <<RR0>>) and they he commented unproto "thanks for knocking me off again", he
was partially right.. the interference everyone gets from busy's causes a lot of people to time out of the box.. which is what we all have be
trying to eliminate by educating people, explaining it is a single connect box and any interference is apt to cause it to time out..at anyrate I
will post more on how to be more successful with Mir and you might check my web page on the files and information from Miles Mann
WF1F, it is a fair explanation of what works and what causes interference.. and how to be sucessfull..

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also

transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Well folks it's that time of the year again. Puzzled?, confused? Thinking that this fellow has fallen from his rocker and can't get up. Nope, it's time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on all the analog birds, especially AO-13. It will be held the third weekend of this month starting at 0001 Saturday going until 2359 Sunday. All times are local and there will be some activity starting Friday afternoon and finishing Monday morning because of DX. If you want more info or set a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

John and Valery certainly have been active, keep trying and I am sure you will get your voice contact, please urge everyone to keep the freq
uncluttered for those whose callsigns they hear and answer.. in other words try not to interfere with transmissions that are going on..the
cosmonauts are enjoying the amateur radio, lets try to keep it this way, if they hear nothing but interference they are apt to shut if off, like they
have in the past and no one will make contacts. Try to have some news or information to pass them that they would like and they will more likely
remember you and catch your call quicker the next time...
my friend Jay WB9AWX works Mir regullarly with 20 watts and a 4 element beam...so keep trying, and enjoy....

I didn't hear a peep from the docked pair so your friend was very lucky..

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: DX and Satellite Cyberscheds available at http://www.sarrio

Posting Cyberscheds on the WWW can benefit ham radio operators throughout
the world with their DX and Satellite schedules.I already have a couple of
operators looking for scheds via ham sats.

You can now schedule contacts with hams all over the world simply and
easily by using the WWW and e-mail.I have set aside a section of my web
site for hams to post their request for over-the-air schedules. Included
in the posting is a place to list the posters specific ham radio contact
needs (countries, zones,IOTA, grid squares ect...). The postings will also
include an e-mail link that will allow hams that read the posts, to easily
request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also
transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot
satellite dish (a real one, not one of the wimpy little dishes which
doesn't have NASA TV available). Any decent techie can scrounge together
the parts for a simple C-Band dish, recevier, and other components for a
couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: questions from a beginner

Hello all,
I hope someone can answer a few question from a beginner at
using amateur radio satellites. The sum total of my previous
experience was listening to AO-21 on 2m (j-pole antenna) back in
1992-3 (I used a program called sattrack on a Sun workstation to
predict the satellite's location). I've read the AMSAT homepage, which
mentions AO-21, but read on another web page that it ceased to be
operational in 1994. Is this correct? I recently ported sattrack to
run under linux, and got a new set of elements from ftp.afit.af.mil,
but I may have made errors and may not be listening at the right time --
I have been unable to receive AO-21 this time.

I'd like to get started, but am not sure in practical terms what to do
first. The equipment I have is:
2m handheld (FM only)
2m 45W mobile (FM only)
2m 5/8 wave ground plane antenna
440Mhz 5/8 ground plane antenna
2m j-pole antenna
2m quad antenna
Drake TR4C HF rig and various dipole antennas
scanner that receives the 440Mhz band.
Baycom packet modem, computer and software
sattrack satellite tracking program

I'm reasonably handy at building antennas if I have instructions, but
don't know enough to design them from scratch. I've done terrestrial
packet before. I have no experience in having a computer control a directional
antenna's direction.

Now, the easiest thing would seem to me to be to try to work some of
the mode JA or JD satellites, since I have a 2m transmitter and a 70cm
receiver. But which one? I understand that AO-27 has a very weak
downlink, so I guess my first step is to build a good directional
antenna for 440Mhz. I'm also planning on listening for MIR on simplex,
and perhaps packet if I can get my setup to receive any packets from
MIR. Another option is FO-20, but it seems to require antennas more
complex than anything I've used (switchable polarization crossed yagi)
and seems in general rather complex to use. Can anyone recommend a
satellite to start out with?

Also, if I were to buy/make some more equipment, what would be the
most productive things to add.
Thanks,
73 de KC4IFB

I've sent several notes to the postmaster too. It would appear that someone
(REINHART) has requested daily digests of something (this NG?) be mailed to
them, and when the mail arrives, the server at geis.COM barfs up a complaint.

If we can't prevent that (due to a deaf postmaster@gis.COM) then the only
other thing is to stop the digest from bing sent. But how do we find out who

is sending the digest without the help of the postmaster@geis.COM in th first
place?

I would suspect that the packet you hear is not coming from Mir - it's unconsiderate hams in your area who are continuing to send packet up to Mir, even though it's in voice mode and nobody's responding.

That's one of the key reasons why automated packet stations are discouraged for use with Mir. The same radio and frequencies are used for both voice and packet, so any packet from the ground is clearly a form of interference when the cosmonaut is trying to use voice.

>
>Thanx,
>
>Jeff G.
>sgross@midusa.net

I've tried the same thing without receiving any hams during a SAREX Mission or from MIR. But I have (just about every orbit) heard the Voice DownLink from MIR (non-ham) the only problem, its in russian. The frequency is 143.625MHz (fm). Also, you'll need a satallite tracking program, and current elements for MIR. What is really neat, when my tracking software says MIR is about 13degrees over the horizon, I start picking up the signal, and when MIR is to be 13 degrees over the horizon on the decent, I stop hearing the signal. You can almost set your watch by it! If you need tracking software and the satellite elements check out AMSATS homepage (I think its http://www.amsat.org)

Hope this helps,
George

1987. RS or OSCAR Output power on 10meters?

Newsgroup: rec.radio.amateur.space

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero,
rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also

transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking that this fellow has fallen from his rocker and can't get up. Nope, it's time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on all the analog birds, especially AO-13. It will be held the third weekend of this month starting at 0001 Saturday going until 2359 Sunday. All times are local and there will be some activity starting Friday afternoon and finishing Monday morning because of DX. If you want more info or set a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the 0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ was busy with an experiment at the time. Alexander told me the conditions are nice and warm on MIR. Temp between 70 and 75 degrees F and they have having lots of fun.

Please make sure you send a SASE.

Dave N6JLH
Dave Now would like a green stamp to help cover postage even with a sase, but a small cost for a great card... should be two tone this time..
congrats on your contact I don't know if it qualifies, but give it a shot, I guess Dave makes the rules about that..
John and Valery certainly have been active, keep trying and I am sure you will get your voice contact, please urge everyone to keep the freq
uncluttered for those whose callsigns they hear and answer.. in other words try not to interfere with transmissions that are going on..the
cosmonauts are enjoying the amateur radio, lets try to keep it this way, if they hear nothing but interference they are apt to shut if off, like they
have in the past and no one will make contacts. Try to have some news or information to pass them that they would like and they will more likely
remember you and catch your call quicker the next time...
my friend Jay WB9AWX works Mir regullarly with 20 watts and a 4 element beam...so keep trying, and enjoy....

I didn't hear a peep from the docked pair so your friend was very lucky..

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: DX and Satellite Cyberscheds available at http://www.sarrio

Posting Cyberscheds on the WWW can benefit ham radio operators throughout
the world with their DX and Satellite schedules.I already have a couple of
operators looking for scheds via ham sats.

You can now schedule contacts with hams all over the world simply and
easily by using the WWW and e-mail.I have set aside a section of my web
site for hams to post their request for over-the-air schedules. Included
in the posting is a place to list the posters specific ham radio contact
needs (countries, zones,IOTA, grid squares ect...). The postings will also
include an e-mail link that will allow hams that read the posts, to easily
request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero,
rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also
transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot
satellite dish (a real one, not one of the wimpy little dishes which
doesn't have NASA TV available). Any decent techie can scrounge together
the parts for a simple C-Band dish, recevier, and other components for a
couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: questions from a beginner

Hello all,
I hope someone can answer a few question from a beginner at
using amateur radio satellites. The sum total of my previous
experience was listening to AO-21 on 2m (j-pole antenna) back in
1992-3 (I used a program called sattrack on a Sun workstation to
predict the satellite's location). I've read the AMSAT homepage, which
mentions AO-21, but read on another web page that it ceased to be
operational in 1994. Is this correct? I recently ported sattrack to
run under linux, and got a new set of elements from ftp.afit.af.mil,
but I may have made errors and may not be listening at the right time --
I have been unable to receive AO-21 this time.

I'd like to get started, but am not sure in practical terms what to do
first. The equipment I have is:
2m handheld (FM only)
2m 45W mobile (FM only)
2m 5/8 wave ground plane antenna
440Mhz 5/8 ground plane antenna
2m j-pole antenna
2m quad antenna
Drake TR4C HF rig and various dipole antennas
scanner that receives the 440Mhz band.
Baycom packet modem, computer and software
sattrack satellite tracking program

I'm reasonably handy at building antennas if I have instructions, but
don't know enough to design them from scratch. I've done terrestrial
packet before. I have no experience in having a computer control a directional
antenna's direction.

Now, the easiest thing would seem to me to be to try to work some of
the mode JA or JD satellites, since I have a 2m transmitter and a 70cm
receiver. But which one? I understand that AO-27 has a very weak
downlink, so I guess my first step is to build a good directional
antenna for 440Mhz. I'm also planning on listening for MIR on simplex,
and perhaps packet if I can get my setup to receive any packets from
MIR. Another option is FO-20, but it seems to require antennas more
complex than anything I've used (switchable polarization crossed yagi)
and seems in general rather complex to use. Can anyone recommend a
satellite to start out with?

Also, if I were to buy/make some more equipment, what would be the
most productive things to add.
Thanks,
73 de KC4IFB

Message-ID: <537li1$2ebm@yuma.ACNS.ColoState.EDU>
Source record: 21367

Around 0650MST 6-OCT-96 I went outside in the middle of the
city of Fort Collins, CO (home of WWV!) with my HT to listen
to MIR. Sure enough KC5TZQ (Blaha) was talking about the
Yankees and the Orioles wist someone. My prediction program
reported the maximum elevation during this pass would be 11
degrees. I thought there was no way I could see Mir since
it would be too low and the lights of the city would disallow
me. But, about 70 degrees inclination, I saw it! It was a
rectangular shape with an orangish glow, took maybe 20 seconds
to sweep across the area I could see (between two buildings).
Every satellite I have seen was like a small moving star, but
this thing was HUGE!
Blaha also spoke with a person in Minneapolis, mobile!

Neat experience! :)

Source record: 21368

It's not as easy as you think. Suppose you're using Oscar 10 (cat #14129). The elements have become 15 days old, so you update them. The kep file you're using is different than the one you used previously. This one call the same satellite AO 10 (again cat #14129). What should the program do now?

1- Keep the satellite identified by #14129, and change the name from Oscar 10 to AO 10. But in this case, if you're used to tracking a satellite called Oscar 10, you see it disappear from the database.

2- Keep the satellite identified by #14129, and change the name of the satellite being read from AO 10 to Oscar 10. This way though, you will be stuck with whatever name is in the keps file the first time ever that keps are read.

3- Since the cat # is unique, it could insert the new name AO 10, and at the same time update the data for Oscar 10. This way you have both Oscar 10 and AO 10 in the database. But since the elements have the same age, you can not use the option to remove sats with older keps, and you will always have a double satellite in the database. This might be better and cause fewer problems for beginners, but once you figure out what's happening with the double name business, you'll get tired of having double sats in there. Remember that this also happens for NOAA 10, NOAA-10, NOAA10 etc.. You would constantly have double, triple names in there everytime you update.

4- Leave the Oscar 10 with its older keps alone, and import the AO 10 with updated data. Now you have both satellites in there. You won't see your Oscar 10 being updated, but there is an AO 10 with fresh data. The old Oscar 10 will be erased if you select to remove older satellites. This is how things work now, but it is by no means a perfect choice. We had to choose between the four, and we selected this one.

We will not use the cat# to identify satellites, even though this uniquely identifies them, because names are much more clearer to humans than numbers. There is endeed the problem of different names for the same satellite, but this is a minor one compared to the one we'd be having if the satellites were identified by numbers. It's the same on the internet. The computer Logsat's home page is on is identified uniquely by 206.103.128.30. This number is meaningless to humans. So we assign it names. In this case it's www.logsat.com, but also florence.netwide.net. Here as well two names for the same number. Once you understand how it works, it's less of a pain than numbers.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally
syndicated radio program about space) and Amazon.com (the premiere
bookstore on the Internet) to add two new exceptional titles to their
already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally
syndicated radio program, StarDate provides a daily dose of fun
astronomical facts and figures. Check out the screen design #005#it#018#s out
of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are
published each day. Enjoy the convenience of having the Amazon staff
separate the wheat from the chaff. Only the highly recommended make
this list.

Coming Soon:

Vision X is very excited to announce the partnering with
Windows95.com. The first calendar, Steve Jenkins#018# Windows 95 Tips &
Tricks is due out October 15th. Steve#018#s Shareware of the Day WINner#018#s
will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know,
365 Days of MovieMania and 365 Days of What#018#s So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a
satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or
CUCme
server). Whenever anything interesting is happening, the poor web site at the

Houston Chronical goes to its knees, as does the shuttle web site at KSC.

rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software
are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking
that this fellow has fallen from his rocker and can't get up. Nope, it's
time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on
all the analog birds, especially AO-13. It will be held the third weekend
of this month starting at 0001 Saturday going until 2359 Sunday. All
times are local and there will be some activity starting Friday afternoon
and finishing Monday morning because of DX. If you want more info or set
a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

Matt O'Born

From: "BJ ARTS" <bjarst@uslink.net>
Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the 0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ was busy with an experiment at the time. Alexander told me the conditions are nice and warm on MIR. Temp between 70 and 75 degrees F and they have having lots of fun.

Subject: RS-15 FREQS?

What are the uplink and downlink freqs for this bird? Are there any
web pages with complete freq listings for all living amateur birds? I have an
old list that I downloaded from the AMSAT web page 6 months ago, but it
seems to be old. Thanks. de Rick VE9HF.

1999. RS-12 KEPS problem?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-07 00:00:00 UTC
From: mbv@ti.com
Message-ID: <53b49r$b05@tilde.csc.ti.com>
Source record: 21272

RS-12 AOS and LOS seems to be about 10 minutes earlier than
my KEPS (TLE876) indicate. The computer clock is correct.
The old KEPS are about 10 minutes fast too.
Is there something wrong with the KEPS? What else could it
be?

Ken K5MBV

Notes
-----

1. NORAD Catalog Number is also known as U.S. Space Command (USSPACECOM) object number and NASA catalog number.
2. No orbital plane position = satellite no longer operational.
3. Clock: Rb = Rubidium; Cs = Cesium.
4. Selective Availability (S/A) had been enabled on Block II satellites during part of 1990; S/A off between about 10 August 1990 and 1 July 1991 due to Gulf crisis; standard level re-implemented on 15 November 1991; occasionally off for test and other purposes. Currently, PRN15 and PRN28 appear to have little or no S/A imposed.
5. Anti-spoofing (A-S) was activated on 94-01-31 at 00:00 UT on all Block II satellites (ref. NANU 050-94042); occasionally off for test and other purposes. A-S was turned off on all satellites at 20:00 UT on 95-04-19 and back on on 95-05-10; off again between 95-06-19 and 95-07-10; and between 95-10-10 and 95-10-31. A-S has been off on PRN28 since 95-02-21.
6. PRN number of SVN32 was changed from 32 to 01 on 93-01-28.
7. The active clock on PRN01 was switched from a Rb to a Cs between 96-08-16 and 96-08-22 (ref. USNO and NANUs 134-96229 and 141-96234).
8. PRN05 and PRN06 are equipped with corner-cube reflectors for satellite laser ranging (SLR). SLR tracking of the satellites will permit onboard clock errors and satellite ephemeris errors in GPS tracking to be differentiated.
9. The decommissioning date for PRN06/SVN03 is the date of termination of operations of this satellite (ref. USNO) and is about 3 weeks later than other published dates for "deactivation".
10. PRN16 will be moved from the E-3 slot to the E-5 slot to make room for PRN10. An orbit maneouvre was carried out on 96-08-19 (ref. NANUs 120-96204, 137-96232).
11. PRN20 hs been unusable since 15:18 UT on 96-05-10 and will not return to service (ref. NANU 118-96204). Cause of failure: loss of 3-axis stabilisation. PRN20 was moved out of the B-2 slot to make room for PRN30 (ref. NANU 162-96256).
12. PRN28 has been moved from the C-2 slot to the C-5 slot, about 40 degrees away. This move, which was initiated on 96-03-06 by lowering the orbit of PRN28 by about 6 km, made way for PRN03. PRN03 is a backup for PRN28 which has some undisclosed equipment problem. PRN28 will remain on the air, with some subsystems shut down to conserve power (ref. NANUs 045-96066, NANU 068-96100, and GPS World Newsletter). The move was completed on 96-08-23 (ref. NANUs 127-96236 and 144-96236).
13. PRN30 (SVN30) was launched on 96-09-12 at 08:49 UT. It achieved initial usable status on 96-10-01 at 15:28 UT (ref. NANUs 162-96256 and 171-96275).

14. Announced date of next scheduled launch: 97-01-13 (first Block IIR satellite).
15. Compiled by Richard B. Langley, Dept. of Geodesy and Geomatics Engineering, University of New Brunswick.

2001. Re: RS or OSCAR Output power on 10meters?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-07 00:00:00 UTC
From: dj0my@aol.com
Message-ID: <53bmjh$49h@newsbf02.news.aol.com>
Source record: 21274

The output power of the RS 10 /11 and the RS12/13 satellites
on the 10m HF band is about 5 Watt PEP into a dipole.
(That's the total power of the transponder+beacon)

The beacons are 0.45 W in low and 1.2 W in high power mode.

As RS15 is concerned here is an info provided to me by RA3AT
one of the members of the RS-Group in Moscow:

>TX output power of RS-15 are 1.5 - 2 times lower then RS-10. You
>may try use more power on Earth side, but RS15 output power limited up to
>aprox. 0.4 watts per each 4kHz subpassband by AGC system (at present time
the
>beacon output is 1.2 wtts). Total output power is sum of beacon and ten
>subchannels of transponder (1.2w + 0.4w * 10 = 5.2w). RS-15 is small
satellite
>(70 kg) and have limited DC power supply. (RS-10/11; 12/13 - 2000 kg.)
>Our Congratulations to you, Best Wishes and Happy New Year with RS15!
>73, Leo, ra3at, RS-group, Moscow.

So far the RS satellite information.....

Good luck and enjoy satelliting !

2010. NORAD Two-Line Orbital Element Sets (TLE879)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-07 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <53c21d$m2v@blackbird.afit.af.mil>
Source record: 21283

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

>In article <32537567.1F36@midusa.net>, sgross@midusa.net says...
>>
>>Hi everyone,
>>
>> My name is Jeff and I have a Pro-2026 100 channel scanner at
>>home. I hear a lot about the frequencies used by the MIR station and the
>>ham guys up there. I know one of the frequencies is 145.55 MHz. I have
>>that and about 5 other nationwide "space" frequencies programmed into my
>>scanner. My question is: why don't I ever hear anything on my scanner
>>on those frequencies? Do they talk in the middle of the night or what?

pretty good guess. As a normal rule the Mir cosmonauts keep Moscow time
(GMT + 3 hours). So if you're in the Western hemisphere, more often than
not they'll be asleep while you're awake. However there is a fair amount
of overlap.

Also remember that Mir's radio is only in voice mode when a cosmonaut is
available. If they're busy doing an experiment, doing maintenance on
Mir, or something else, then they probably aren't using the radio.

You will occasionally here packet from Mir when the crew's otherwise
occupied or asleep.

In any case you're very likely to hear John Blaha KC5TZQ whenever he's
awake, it's a reasonable hour on the ground, and Mir is in range of
Houston Texas. He's probably talking to W5RRR, the Johnson Space Center
ham shack.

Or you'll hear him during the weekends chatting with hams around the
country - and asking everybody how the Dallas Cowboys did!

In article <534jrt$hl6@news.ptd.net> George F., georgef@prolog.net writes:

>I've tried the same thing without receiving any hams during a SAREX Mission
>or from MIR. But I have (just about every orbit) heard the Voice DownLink
>from MIR (non-ham) the only problem, its in russian. The frequency is
>143.625MHz (fm).

This is one of the Mir 'official' communications frequencies - not a ham
frequency. So it isn't likely that you'll hear much in English.

>What is really neat, when my tracking software says MIR is
>about 13degrees over the horizon, I start picking up the signal, and when MIR
>is to be 13 degrees over the horizon on the decent, I stop hearing the
>signal. You can almost set your watch by it!

You haven't told me where you're located, George, but I could probably calculate your location based on that information. What you're hearing is Mir communicating with one of its "ground" stations. I put "ground" in quotes, because it's actually a NASA installation! Several NASA installations, including Edwards and Wallops are now using off-the-shelf equipment for Mir communications. They're linked by international phone lines with the Russian control center, and give the Russians additional communications capabilities, when they would normally be out of range.

So what you're hearing when Mir is over 13 degrees above your horizon is Mir passing above the horizon for the ground station, and likewise when you loose the signal they're actually going out of range with that ground station. The fact that you're hearing it is incidental. As a guess - since the 13 degrees is symetrical you're either on a roughly straight line normal to the 51.6 degree flight path (either ascending or decending node) for either Wallops or Edwards. A bit more calculations with Mir's altitude and the diameter of the Earth would give your location a bit more accurately.

Set up your tracking software to show you when Mir is passing within range of Wallops or Edwards, and I'd suspect that it would match your AOS/LOS times fairly accurately.

2012. Conference: Low Cost Access to Space in Education - Ottawa, Nov.12.96

Newsgroup: rec.radio.amateur.space
Date: 1996-10-08 00:00:00 UTC
From: Dave Marsden <marsden@conveyor.com>
Message-ID: <53co35$p45@loki.tor.hookup.net>
Source record: 21285

Please find below, the Conference Program for "Low Cost Access to Space in Education '96" (LCASE). LCASE is organized by the Canadian Alumni of the International Space University. It takes place in conjunction with the CASI 9th Astronautics Conference in Ottawa on November 12, 1996.

A number of invited speakers will cover microsat-related topics including Rick Fleeter from AeroAstro, Mark Allery of Surrey Satellite Technologies and Prof. Robert Twiggs of Stanford's Satellite Systems Development Lab.

Registration is $30 (CAN) for students and $75 others, seating is limited. Please register by contacting:

9th Conference on Astronautics - Space Education Workshop
CASI, 130 Slater Street, Suite 818
Ottawa, Ontario K1P 6E3
Tel: 613-234-0191
Fax: 613-234-9039
e-mail: casi@casi.ca

For more information, check the conference web site at

http://www.caisu.ca/

or contact either of the conference co-chairs:

John Criswick criswick@conveyor.com or
Jean-Francois Simard jf.simard@dreo.dnd.ca

Low-Cost Access to Space in Education ï¿½96
TUESDAY, November 12, Westin Convention Centre
Ottawa, Canada

Organized by the Canadian Alumni of the International Space University (CAISU)

Co-sponsors: Canadian Foundation for the International Space University
Canadian Aeronautics and Space Institute
Canadian Space Agency

07:30 Registration

08:45 Welcome and Opening Remarks
Mr. John Criswick, Chair LCASE ï¿½96; Mr. Jean-Francois Simard, Co-chair LCASE ï¿½96

09:00-17:00 Parallel Poster Session

09:00 Lessons Learned in Low-Cost Access to Space at Stanford University
Prof. Robert Twiggs, Director, Satellite Systems Development Lab,
Stanford University

09:40 Lessons Learned in Low-Cost Access to Space in Education
Dr. Mark Allery, Surrey Satellite Technology Ltd.

10:15 Break (Poster Session)

10:30 Low-Cost Microspacecraft Design
Dr. Rick Fleeter, President, AeroAstro Corporation

11:10 Small Payload Opportunities in the CSA Long-term Space Plan
Dr. David Kendall, Program Scientist, Canadian Space Agency

11:40 Graduate Student Presentation

12:00 Light Lunch (Poster Session)

13:00 SILA: A Student Microsatellite Project
Prof. Doug Staley, Department of Mechanical and Aerospace
Engineering, Carleton University (tentative)

13:30 Using the University Satellite-Development Model in Industry
Mr. George Tyc, Project Manager, Bristol Aerospace Ltd.

14:00 Building Space-Qualified Hardware in Universities
Prof. Gethyn Timothy, Centre for Space Research, Department of
Physics, University of New Brunswick (tentative)

15:00 Break (Poster Session)

15:30 Graduate Student Presentation

16:00 Panel Discussion (Moderator: Jean-Francois Simard, CAISU)
Low-Cost Access to Space in Canada: How to Make it Happen

17:00 Reception (Poster Session)

A poster session will run in parallel, giving students, student groups,
universities and other organizations an opportunity to present their
work. Program information may be obtained from CAISU's Web site at

http://www.caisu.ca/

or contact either of the conference co-chairs:

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also

transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: Help with Freq's...

I am looking at an older radio that has Sat capability but works only,
116-150Mz and 225-400Mz, Is there any Bird I work using AM/FM? They make
a good antennae for it but I don't want to invest unless 3D or something
else might let me use it.

Thanks Alex@hic.net

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking that this fellow has fallen from his rocker and can't get up. Nope, it's time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on all the analog birds, especially AO-13. It will be held the third weekend of this month starting at 0001 Saturday going until 2359 Sunday. All times are local and there will be some activity starting Friday afternoon and finishing Monday morning because of DX. If you want more info or set a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the 0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ was busy with an experiment at the time. Alexander told me the conditions are nice and warm on MIR. Temp between 70 and 75 degrees F and they have having lots of fun.

I'm looking for information on weather sats (NOAA 12 & 14). I've looked at NOAA's pages and didn't find them real handy. Does anyone know of any web pages or other sources of info on the net where I could find out more about these satellites? I am wanting to know what equipment it would take to receive images from these birds.

Thanks

Mark <KB9KHM>

2018. Info on Mir crew activities?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-08 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <325B1443.3A5C@ix.netcom.com>
Source record: 21291

Does anybody on the group know, or know where I can obtain an indication of the daily schedule of the Mir crew? What I am trying to determine is the times that would be likely and/or unlikely for a voice QSO, corresponding their free time with the available passes in my area.

Is the Mir crew large enough that somebody is on duty 24 hours (like a 7-11, the doors are never locked :-), or do they all sleep and eat at the same time each day. Do they operate on a 24 hour rotating schedule, or is their day shorter or longer? In other words, a couple of weeks ago, I heard John Blaha telling somebody in a QSO that he was having a lunch break, at about 07:15 EDT (my time.) Is it safe to assume that their lunch break is always going to be about 07:15 EDT or equivalent? Etc.

Please make sure you send a SASE.

Dave N6JLH
Dave Now would like a green stamp to help cover postage even with a sase, but a small cost for a great card... should be two tone this time..
congrats on your contact I don't know if it qualifies, but give it a shot, I guess Dave makes the rules about that..
John and Valery certainly have been active, keep trying and I am sure you will get your voice contact, please urge everyone to keep the freq
uncluttered for those whose callsigns they hear and answer.. in other words try not to interfere with transmissions that are going on..the
cosmonauts are enjoying the amateur radio, lets try to keep it this way, if they hear nothing but interference they are apt to shut if off, like they
have in the past and no one will make contacts. Try to have some news or information to pass them that they would like and they will more likely
remember you and catch your call quicker the next time...
my friend Jay WB9AWX works Mir regullarly with 20 watts and a 4 element beam...so keep trying, and enjoy....

I didn't hear a peep from the docked pair so your friend was very lucky..

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: DX and Satellite Cyberscheds available at http://www.sarrio

Posting Cyberscheds on the WWW can benefit ham radio operators throughout
the world with their DX and Satellite schedules.I already have a couple of
operators looking for scheds via ham sats.

You can now schedule contacts with hams all over the world simply and
easily by using the WWW and e-mail.I have set aside a section of my web
site for hams to post their request for over-the-air schedules. Included
in the posting is a place to list the posters specific ham radio contact
needs (countries, zones,IOTA, grid squares ect...). The postings will also
include an e-mail link that will allow hams that read the posts, to easily
request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero,
rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also
transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot
satellite dish (a real one, not one of the wimpy little dishes which
doesn't have NASA TV available). Any decent techie can scrounge together
the parts for a simple C-Band dish, recevier, and other components for a
couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

I hear them on a LOT now that the new crew is onboard. What power are you
using?

Subject: questions from a beginner

Hello all,
I hope someone can answer a few question from a beginner at
using amateur radio satellites. The sum total of my previous
experience was listening to AO-21 on 2m (j-pole antenna) back in
1992-3 (I used a program called sattrack on a Sun workstation to
predict the satellite's location). I've read the AMSAT homepage, which
mentions AO-21, but read on another web page that it ceased to be
operational in 1994. Is this correct? I recently ported sattrack to
run under linux, and got a new set of elements from ftp.afit.af.mil,
but I may have made errors and may not be listening at the right time --
I have been unable to receive AO-21 this time.

I'd like to get started, but am not sure in practical terms what to do
first. The equipment I have is:
2m handheld (FM only)
2m 45W mobile (FM only)
2m 5/8 wave ground plane antenna
440Mhz 5/8 ground plane antenna
2m j-pole antenna
2m quad antenna
Drake TR4C HF rig and various dipole antennas
scanner that receives the 440Mhz band.
Baycom packet modem, computer and software
sattrack satellite tracking program

I'm reasonably handy at building antennas if I have instructions, but
don't know enough to design them from scratch. I've done terrestrial
packet before. I have no experience in having a computer control a directional
antenna's direction.

Now, the easiest thing would seem to me to be to try to work some of
the mode JA or JD satellites, since I have a 2m transmitter and a 70cm
receiver. But which one? I understand that AO-27 has a very weak
downlink, so I guess my first step is to build a good directional
antenna for 440Mhz. I'm also planning on listening for MIR on simplex,
and perhaps packet if I can get my setup to receive any packets from
MIR. Another option is FO-20, but it seems to require antennas more
complex than anything I've used (switchable polarization crossed yagi)
and seems in general rather complex to use. Can anyone recommend a
satellite to start out with?

Also, if I were to buy/make some more equipment, what would be the
most productive things to add.
Thanks,
73 de KC4IFB

John was very active during the tow passes i listened to. I worked him on the 0700utc pass over North America. I was using and FT-736 and a 160 2 meter brick into a 1/4 wave vert. John likes to talk about baseball and astronomy. The passes seem to be very active over the US and Canada during the 0400and 0700utc time frame. I have worked both R0MIR and KC5TZQ during these time periods. 73 de BJ Arts WT0N

The crew lives on Moscow time and all sleep at eat togeather. They do at times stay up late.. sometimes for a purpose sometime
because of inability to sleep I think.. they sleep from approximately 3:30-4:00 edt untill about midnight edt. I have heard them on
voice at 7:00 PM edt though . the best time to catch them is in the morning, they do exercises and they were able to talk on the
radio while munching and doing exercises.. Aleksander Serebrov used to talk on the radio while riding the exercycle..

>
> Is the Mir crew large enough that somebody is on duty 24 hours (like a

There are only three on board at this time though I have been told Mir would hold up to six people comfortably..
their schedules are apt to be dictated by ongoing experiments, and communications schedules, from my understanding..

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

From: faimar@linknet.it (Luca Babini)
Subject: DSP software for Creative ?

Hi ...
I'm looking for software to use Creative Sound Blaster as DSP for EME
operation..

Any info ???

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Burns (who wishes he had a place for a Big Ugly Dish)

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero,
rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also

transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Well folks it's that time of the year again. Puzzled?, confused? Thinking that this fellow has fallen from his rocker and can't get up. Nope, it's time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on all the analog birds, especially AO-13. It will be held the third weekend of this month starting at 0001 Saturday going until 2359 Sunday. All times are local and there will be some activity starting Friday afternoon and finishing Monday morning because of DX. If you want more info or set a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the 0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ was busy with an experiment at the time. Alexander told me the conditions are nice and warm on MIR. Temp between 70 and 75 degrees F and they have having lots of fun.

Please make sure you send a SASE.

Dave N6JLH
Dave Now would like a green stamp to help cover postage even with a sase, but a small cost for a great card... should be two tone this time..
congrats on your contact I don't know if it qualifies, but give it a shot, I guess Dave makes the rules about that..
John and Valery certainly have been active, keep trying and I am sure you will get your voice contact, please urge everyone to keep the freq
uncluttered for those whose callsigns they hear and answer.. in other words try not to interfere with transmissions that are going on..the
cosmonauts are enjoying the amateur radio, lets try to keep it this way, if they hear nothing but interference they are apt to shut if off, like they
have in the past and no one will make contacts. Try to have some news or information to pass them that they would like and they will more likely
remember you and catch your call quicker the next time...
my friend Jay WB9AWX works Mir regullarly with 20 watts and a 4 element beam...so keep trying, and enjoy....

I didn't hear a peep from the docked pair so your friend was very lucky..

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: DX and Satellite Cyberscheds available at http://www.sarrio

Posting Cyberscheds on the WWW can benefit ham radio operators throughout
the world with their DX and Satellite schedules.I already have a couple of
operators looking for scheds via ham sats.

You can now schedule contacts with hams all over the world simply and
easily by using the WWW and e-mail.I have set aside a section of my web
site for hams to post their request for over-the-air schedules. Included
in the posting is a place to list the posters specific ham radio contact
needs (countries, zones,IOTA, grid squares ect...). The postings will also
include an e-mail link that will allow hams that read the posts, to easily
request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero,
rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also
transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot
satellite dish (a real one, not one of the wimpy little dishes which
doesn't have NASA TV available). Any decent techie can scrounge together
the parts for a simple C-Band dish, recevier, and other components for a
couple of hundred dollars. Add a phone patch with a remote controller
and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been
transmitting NASA audio continiously from start of countdown through
landing on his 146.94 Mhz repeater for every mission since STS-7 in June
1983. (other than hardware problems, local nets, or other technical
issues).

LISATS, the local amateur television group has an amateur television
repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: questions from a beginner

Hello all,
I hope someone can answer a few question from a beginner at
using amateur radio satellites. The sum total of my previous
experience was listening to AO-21 on 2m (j-pole antenna) back in
1992-3 (I used a program called sattrack on a Sun workstation to
predict the satellite's location). I've read the AMSAT homepage, which
mentions AO-21, but read on another web page that it ceased to be
operational in 1994. Is this correct? I recently ported sattrack to
run under linux, and got a new set of elements from ftp.afit.af.mil,
but I may have made errors and may not be listening at the right time --
I have been unable to receive AO-21 this time.

I'd like to get started, but am not sure in practical terms what to do
first. The equipment I have is:
2m handheld (FM only)
2m 45W mobile (FM only)
2m 5/8 wave ground plane antenna
440Mhz 5/8 ground plane antenna
2m j-pole antenna
2m quad antenna
Drake TR4C HF rig and various dipole antennas
scanner that receives the 440Mhz band.
Baycom packet modem, computer and software
sattrack satellite tracking program

I'm reasonably handy at building antennas if I have instructions, but
don't know enough to design them from scratch. I've done terrestrial
packet before. I have no experience in having a computer control a directional
antenna's direction.

Now, the easiest thing would seem to me to be to try to work some of
the mode JA or JD satellites, since I have a 2m transmitter and a 70cm
receiver. But which one? I understand that AO-27 has a very weak
downlink, so I guess my first step is to build a good directional
antenna for 440Mhz. I'm also planning on listening for MIR on simplex,
and perhaps packet if I can get my setup to receive any packets from
MIR. Another option is FO-20, but it seems to require antennas more
complex than anything I've used (switchable polarization crossed yagi)
and seems in general rather complex to use. Can anyone recommend a
satellite to start out with?

Also, if I were to buy/make some more equipment, what would be the
most productive things to add.
Thanks,
73 de KC4IFB

Hi Rolf,

Isn't that what I said?
You had me quite worried for a moment. I know the URL went out wrong in the last journal, but I did type it correctly here. The journal error was because someone else thought that .org.uk must have been a mistake and consequently all occurance of www.rig.org.uk got changed to www.rig.org.

Anyhow as the guy who maintains the RIG web pages I ought to know what the URL is, but you did get me worried about typos.

Whilst we are on the subject I am looking at a serious update of the RIG web pages and am learning Java in the hope of writing an online wx sat reception demo.

If anyone has ideas about what they'd like to see on the RIG web pages then drop me a line. We won't hold more pictues as we feel that there is an abundance of sites carrying images.

If I ignore emails over the next week it's because I won't be here.

Regards J.

You are ABSOLUTLY RIGHT...I should know better than to read the
newsgroups before I've had my first cup of coffee...
Sorry about the mixup.

Regarding the RIG web pages, it would be nice to have an index of
the articles in the RIG Journal. There is a lot of good info there.

Regards,
Rolf

Message-ID: <53irt7$1f3@faatcrl.faa.gov>
Source record: 21314

The other night, 10/8 about 3am est, a MIR post was read over the air discussing a 9600 baud paket frequency set. The frequency's mentioned were 437.975/435.775, and 437.925/435.725 with a pl 141.3 (which I monitor every pass and have heard nothing). I know about the later but not the former. Anybody know anything about this ? If anyone hears anything on either set let me know.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite
dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme
server). Whenever anything interesting is happening, the poor web site at the
Houston Chronical goes to its knees, as does the shuttle web site at KSC.

> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the
shuttle audio via a local repeater, and even better would be to also

transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: Help with Freq's...

I am looking at an older radio that has Sat capability but works only,
116-150Mz and 225-400Mz, Is there any Bird I work using AM/FM? They make
a good antennae for it but I don't want to invest unless 3D or something
else might let me use it.

Thanks Alex@hic.net

Well folks it's that time of the year again. Puzzled?, confused? Thinking that this fellow has fallen from his rocker and can't get up. Nope, it's time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on all the analog birds, especially AO-13. It will be held the third weekend of this month starting at 0001 Saturday going until 2359 Sunday. All times are local and there will be some activity starting Friday afternoon and finishing Monday morning because of DX. If you want more info or set a sked, e-mail me.

From: aikido@magicnet.net (Matt O'Born)
Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer running Windows95. On my piece of antique I was using STSOrbit and Traksat for my modest satellite activity (RS satellites and NOAA reception). With my new machine I'd like to use a satellite tracking program that works under Windows. I've been told about Logsat and WISP. Has anyone out there had any experience with them? Do you have any others you can suggest? I'm looking for either shareware programs or commercial ones (if they are worth the price). Any comments are welcome!

From: "BJ ARTS" <bjarst@uslink.net>
Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the 0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ was busy with an experiment at the time. Alexander told me the conditions are nice and warm on MIR. Temp between 70 and 75 degrees F and they have having lots of fun.

Source record: 21319

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not made to be understandable by man, that's why we also assign NAMES to the satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 & ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01 & gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in telecommunications and you're tracking Gorizon-14 & Intelsat-601 & Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not going to know the satellites by catalog number, you're going to recognize them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object
number for identification of data. Don't look at the names, but just
write the names in the keplerset file just as the other data is written.
You will never have a double name because each object number can be present
only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

Subject: DC/MD/VA RA Enthusiasts?

I'm looking for people in the DC metro area who are interested in, or
already active in Amateur Radio Astronomy. I would like to combine
expertise and resources to construct and operate an RA site, and
conduct data analysis.

Followups or email OK.

Subject: KANSAS CITY TRACKER

Hi I just recently bought a KC Tracker at an estate sale.
When I bought it, I did not realize that I also needed the
accompanying software disk. If u have this disk I would appreciate a
copy. I would pay for shipping or an Email transfer with an attachment
would work well too.
Thanks.....Peter, VA3PK

I do not think so. MIR does not track that way. It moves toward the East
around the world, not West.

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps

Heartland Internet Services -- Lots of Web Presence information

The URL to use is:

http://www.trucom.com/ppages/marty

Thanks!

Take Care & 73

From: KD1YV <jimkd1yv@ix.netcom.com>
Subject: Info on Mir crew activities?

Does anybody on the group know, or know where I can obtain an indication
of the daily schedule of the Mir crew? What I am trying to determine is
the times that would be likely and/or unlikely for a voice QSO,
corresponding their free time with the available passes in my area.

Is the Mir crew large enough that somebody is on duty 24 hours (like a
7-11, the doors are never locked :-), or do they all sleep and eat at the
same time each day. Do they operate on a 24 hour rotating schedule, or
is their day shorter or longer? In other words, a couple of weeks ago, I
heard John Blaha telling somebody in a QSO that he was having a lunch
break, at about 07:15 EDT (my time.) Is it safe to assume that their
lunch break is always going to be about 07:15 EDT or equivalent? Etc.

The crew lives on Moscow time and all sleep at eat togeather. They do at times stay up
late.. sometimes for a purpose sometime
because of inability to sleep I think.. they sleep from approximately 3:30-4:00 edt untill
about midnight edt. I have heard them on
voice at 7:00 PM edt though . the best time to catch them is in the morning, they do
exercises and they were able to talk on the
radio while munching and doing exercises.. Aleksander Serebrov used to talk on the radio
while riding the exercycle..

There are only three on board at this time though I have been told Mir would hold up to six

people comfortably..
their schedules are apt to be dictated by ongoing experiments, and communications schedules, from my understanding..

Certainly. Many amateur radio ops use tcp/ip over packet. But you
might want to post this question to the digital group, or subscribe
to the nos-bbs list (nos-bbs-request@hydra.carleton.ca, I think).

: Regards,
: Rolf

Hi Rolf,

Isn't that what I said?
You had me quite worried for a moment. I know the URL went out wrong in the last journal, but I did type it correctly here. The journal error was because someone else thought that .org.uk must have been a mistake and consequently all occurance of www.rig.org.uk got changed to www.rig.org.

Anyhow as the guy who maintains the RIG web pages I ought to know what the URL is, but you did get me worried about typos.

Whilst we are on the subject I am looking at a serious update of the RIG web pages and am learning Java in the hope of writing an online wx sat reception demo.

If anyone has ideas about what they'd like to see on the RIG web pages then drop me a line. We won't hold more pictues as we feel that there is an abundance of sites carrying images.

If I ignore emails over the next week it's because I won't be here.

Regards J.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Burns (who wishes he had a place for a Big Ugly Dish)

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking
that this fellow has fallen from his rocker and can't get up. Nope, it's
time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on
all the analog birds, especially AO-13. It will be held the third weekend
of this month starting at 0001 Saturday going until 2359 Sunday. All
times are local and there will be some activity starting Friday afternoon
and finishing Monday morning because of DX. If you want more info or set
a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the
0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ
was busy with an experiment at the time. Alexander told me the conditions
are nice and warm on MIR. Temp between 70 and 75 degrees F and they have
having lots of fun.

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

Subject: KANSAS CITY TRACKER

Hi I just recently bought a KC Tracker at an estate sale.
When I bought it, I did not realize that I also needed the
accompanying software disk. If u have this disk I would appreciate a
copy. I would pay for shipping or an Email transfer with an attachment
would work well too.
Thanks.....Peter, VA3PK

Subject: Need 9600 mod for FT-780R

Thanks for reading this. I need the modification details for 9600 baud
receive for the Yaesu FT-780R transceiver. I have found a point on D2

for feeding to the modem but the output appears to be quite low.
If you have the info or can point me to it, please contact me at
kn4hh@avana.net

Thanks for posting his call. I was not sure what it was. I
heard him talking about his daughter in Indiana or something like that
during a pass early Friday A.M. around 2:40am EST

Who is John? I guess he is an american onboard MIR???

Also ... what is the QSL information for MIR....I connected and left a
hello message via packet on ROMIR.

Also what is the UHF frequencies for MIR and what are they supposed to
be used for.

Newsgroup: rec.radio.amateur.space
Date: 1996-10-12 00:00:00 UTC
From: REQSVR@gw.ab6qv.ampr.ORG
Message-ID: <10245@gw.ab6qv.ampr.org>
Source record: 21235

```
Welcome to the TNOS Request Server (REQSVR) release 1.01b1

The current version of REQSVR is a sub-set of the standard REQDBF commands
with extensions to support group message distribution. You send a command
to REQSVR by sending a message to REQSVR@gw.ab6qv.ampr.org. The desired
command is given as the subject for the message. Only the Upload command
has any data, so all other types have a blank body for the message.
The response from the server will return the same subject line, following
a status description. If no errors are found, this will be "Accepted",
followed by your REQSVR command.
The valid commands are:

H[elp] (or I[nfo]) Returns this document.

W[hat] [dir|file] Returns a directory of the desired directory
or files. Wildcards are allowed. If no dir/filesp
is given, the root directory is used. You must have
permission to view the dir/files requested.

D[ownload] filename Retrieves (Downloads) a copy of the file named
'filename' from the server. You must have
permission to read that file.

U[pload] filename Sends (Uploads) a file named 'filename' to
the server. You must have permission to write
that file.

V[ersion] Returns the current version of TNOS running on
the server system.

INFOR[m] dir|file This command asks REQSVR on the server to
inform you of all changes made to the specified
file. This will not send you the file but rather a
message telling you that the file has been changed.
You can then decide if you wish to request a new
copy of that file from the server. You must have
permission to read that file. You may also request
to be informed of all changes to any file in a
directory by giving a directory name.

To cancel an INFORM use UNINFORM.

UNI[nform] dir|file This command cancels an existing INFORM request
on the server. This command will be accepted
by any server that has accepted the INFORM request.
(Be sure to send this to the server that is sending
you the INFORM notices)
```

S[ubscribe] dir|file This command asks REQSVR on the server to send
you a copy of 'filenm' each time it is changed by
REQSVR. You must have permission to read that file.
You may also request to be sent a copy of all files
changes in a directory by giving a directory name.

Subscribe's may be cancelled with the UNSUBSCRIBE
request.

UNS[ubscribe] dir|file This command cancels an existing SUBSCRIBE request
on the server. This command will be accepted by
any server that has accepted the SUBSCRIBE request.
(Be sure to send this to the server that is sending
you the INFORM notices)

G[roup] action [name] This command supports the TNOS function of
distribution groups. A distribution group works
like an alias, or more accurately, like an Internet
mail-group. The group "action" is executed on the
destination server. All users are permitted the
following actions:

G[roup] S[ubscribe] groupname
Adds yourself to the mail group, "groupname"

G[roup] U[nsubscribe] groupname
Removes yourself from mail group, "groupname"

G[roup] L[ist]
Send you a message back with a listing of the
current mail groups on the destination server.

The following actions are available only to those
who have SYSOP permissions on the destination server:

G[roup] I[nform] groupname
Allows you to be informed of new members to
the mail group, "groupname"

G[roup] UNI[nform] groupname
Stops informing you of new members to the
mail group, "groupname"

G[roup] A[dd] groupname
Creates a new mail group, "groupname"

G[roup] D[elete] groupname
Deletes an existing mail group, "groupname"

Q[th] callsign Returns callbook infomation for the ham call
"callsign".

ERROR STATUS DESCRIPTIONS:

Not Found xxxx The HELP/INFO file was not found on the server's
system.

Denied xxxx You do not have proper permission on the server's
system to complete the desired action. This can
come in response to a W, D, or U command.

IO Error xxxx There was an IO error on the server's system. This
is most probably caused by an invalid filename.
This can come in response to a W, D, or U command.

Unknown xxxx This comes back to you if you requested a command
that the server's system does not recognize.

If one of the above Error Status Descriptions are generated, the Mail Daemon
sends the original message back to the requestor and a message is send to
the SYSOP of the server system. The original message is stored on the server
system for the SYSOP's examination.

2062. want:UT-10 for TS-790A

>73 Jeff kb2wqm@juno.com

The first set of freqs is Mir packet. There's a 2.2 gig split.
The second set of freqs is voice mode with a 2.2 gig split and 141.3 tone.
I haven't used either yet but I hear the voice repeater has been active.

No, I figured that the loss of that spacecraft put a kink in the plans, but I didn't know to what extent. Does anyone know if the satellite is ready to go and just waiting to improve the Ariane 5, or are they still finishing up details on the satellite?
Thanks!

Overhearing the AMSTA UK net today it was reported that a message from
MIR stated that they now work on GMT(UTC) and go to bed at 22.00GMT

not sure what time they get up though.

Hi I just recently bought a KC Tracker at an estate sale.
When I bought it, I did not realize that I also needed the
accompanying software disk. If u have this disk I would appreciate a
copy. I would pay for shipping or an Email transfer with an attachment
would work well too.
Thanks.....Peter, VA3PK

From: KD1YV <jimkd1yv@ix.netcom.com>
Subject: Info on Mir crew activities?

Does anybody on the group know, or know where I can obtain an indication
of the daily schedule of the Mir crew? What I am trying to determine is
the times that would be likely and/or unlikely for a voice QSO,
corresponding their free time with the available passes in my area.

Is the Mir crew large enough that somebody is on duty 24 hours (like a
7-11, the doors are never locked :-), or do they all sleep and eat at the
same time each day. Do they operate on a 24 hour rotating schedule, or
is their day shorter or longer? In other words, a couple of weeks ago, I
heard John Blaha telling somebody in a QSO that he was having a lunch
break, at about 07:15 EDT (my time.) Is it safe to assume that their
lunch break is always going to be about 07:15 EDT or equivalent? Etc.

The crew lives on Moscow time and all sleep at eat togeather. They do at times stay up
late.. sometimes for a purpose sometime
because of inability to sleep I think.. they sleep from approximately 3:30-4:00 edt untill
about midnight edt. I have heard them on
voice at 7:00 PM edt though . the best time to catch them is in the morning, they do
exercises and they were able to talk on the
radio while munching and doing exercises.. Aleksander Serebrov used to talk on the radio
while riding the exercycle..

There are only three on board at this time though I have been told Mir would hold up to six

people comfortably..
their schedules are apt to be dictated by ongoing experiments, and communications schedules, from my understanding..
Have fun//

Certainly. Many amateur radio ops use tcp/ip over packet. But you
might want to post this question to the digital group, or subscribe
to the nos-bbs list (nos-bbs-request@hydra.carleton.ca, I think).

: Regards,
: Rolf

Hi Rolf,

Isn't that what I said?
You had me quite worried for a moment. I know the URL went out wrong in the last journal, but I did type it correctly here. The journal error was because someone else thought that .org.uk must have been a mistake and consequently all occurance of www.rig.org.uk got changed to www.rig.org.

Anyhow as the guy who maintains the RIG web pages I ought to know what the URL is, but you did get me worried about typos.

Whilst we are on the subject I am looking at a serious update of the RIG web pages and am learning Java in the hope of writing an online wx sat reception demo.

If anyone has ideas about what they'd like to see on the RIG web pages then drop me a line. We won't hold more pictues as we feel that there is an abundance of sites carrying images.

If I ignore emails over the next week it's because I won't be here.

Regards J.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking
that this fellow has fallen from his rocker and can't get up. Nope, it's
time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on
all the analog birds, especially AO-13. It will be held the third weekend
of this month starting at 0001 Saturday going until 2359 Sunday. All
times are local and there will be some activity starting Friday afternoon
and finishing Monday morning because of DX. If you want more info or set
a sked, e-mail me.

From: aikido@magicnet.net (Matt O'Born)
Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Matt O'Born

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the
0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ
was busy with an experiment at the time. Alexander told me the conditions
are nice and warm on MIR. Temp between 70 and 75 degrees F and they have
having lots of fun.

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

When Ariane 501 went bang, Intelsat (I think), who
had 502, swapped with us (on 503), so we're on
502 in spring of '97. I heard that Amsat was using the
extra time well....
At any rate, we'll be on the first successful launch of
an Ariane 5. They pretty much figured out the prob with 501.

What is trhe proper proceedure for contacting Mir utilizing Packet.
Currently, I am only getting the chanceto work Mir (evenings) when packet is running and not voice.
I have gotten a few "busy from R0MIR" messages..however I have seen Hams slip throught and connect with ease to the packet station.(looking in my monitor window)

What am I doing wrong? Or rather what is the trick that I am missing..:-)

Subject: KANSAS CITY TRACKER

Hi I just recently bought a KC Tracker at an estate sale.
When I bought it, I did not realize that I also needed the
accompanying software disk. If u have this disk I would appreciate a
copy. I would pay for shipping or an Email transfer with an attachment
would work well too.
Thanks.....Peter, VA3PK

From: KD1YV <jimkd1yv@ix.netcom.com>
Subject: Info on Mir crew activities?

Does anybody on the group know, or know where I can obtain an indication
of the daily schedule of the Mir crew? What I am trying to determine is
the times that would be likely and/or unlikely for a voice QSO,
corresponding their free time with the available passes in my area.

Is the Mir crew large enough that somebody is on duty 24 hours (like a
7-11, the doors are never locked :-), or do they all sleep and eat at the
same time each day. Do they operate on a 24 hour rotating schedule, or
is their day shorter or longer? In other words, a couple of weeks ago, I
heard John Blaha telling somebody in a QSO that he was having a lunch
break, at about 07:15 EDT (my time.) Is it safe to assume that their
lunch break is always going to be about 07:15 EDT or equivalent? Etc.

The crew lives on Moscow time and all sleep at eat togeather. They do at times stay up
late.. sometimes for a purpose sometime
because of inability to sleep I think.. they sleep from approximately 3:30-4:00 edt untill
about midnight edt. I have heard them on
voice at 7:00 PM edt though . the best time to catch them is in the morning, they do
exercises and they were able to talk on the
radio while munching and doing exercises.. Aleksander Serebrov used to talk on the radio
while riding the exercycle..

There are only three on board at this time though I have been told Mir would hold up to six

people comfortably..
their schedules are apt to be dictated by ongoing experiments, and communications schedules, from my understanding..
Have fun//

Subject: KC5TZQ active on MIR tonight

John was very active during the tow passes i listened to. I worked him on the 0700utc pass over North America. I was using and FT-736 and a 160 2 meter brick into a 1/4 wave vert. John likes to talk about baseball and astronomy. The passes seem to be very active over the US and Canada during the 0400and 0700utc time frame. I have worked both R0MIR and KC5TZQ during these time periods. 73 de BJ Arts WT0N

Hi Phil!

The latest news that I have is April of 1997 for launch. Hope so anyway!

Certainly. Many amateur radio ops use tcp/ip over packet. But you
might want to post this question to the digital group, or subscribe
to the nos-bbs list (nos-bbs-request@hydra.carleton.ca, I think).

: Regards,
: Rolf

Hi Rolf,

Isn't that what I said?
You had me quite worried for a moment. I know the URL went out wrong in the last journal, but I did type it correctly here. The journal error was because someone else thought that .org.uk must have been a mistake and consequently all occurance of www.rig.org.uk got changed to www.rig.org.

Anyhow as the guy who maintains the RIG web pages I ought to know what the URL is, but you did get me worried about typos.

Whilst we are on the subject I am looking at a serious update of the RIG web pages and am learning Java in the hope of writing an online wx sat reception demo.

If anyone has ideas about what they'd like to see on the RIG web pages then drop me a line. We won't hold more pictues as we feel that there is an abundance of sites carrying images.

If I ignore emails over the next week it's because I won't be here.

Regards J.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

From: ke4htm@bluenet.net (Jamie R. Dean)
Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Well folks it's that time of the year again. Puzzled?, confused? Thinking
that this fellow has fallen from his rocker and can't get up. Nope, it's
time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on
all the analog birds, especially AO-13. It will be held the third weekend
of this month starting at 0001 Saturday going until 2359 Sunday. All
times are local and there will be some activity starting Friday afternoon
and finishing Monday morning because of DX. If you want more info or set
a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the
0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ
was busy with an experiment at the time. Alexander told me the conditions
are nice and warm on MIR. Temp between 70 and 75 degrees F and they have
having lots of fun.

Hi I just recently bought a KC Tracker at an estate sale.
When I bought it, I did not realize that I also needed the
accompanying software disk. If u have this disk I would appreciate a
copy. I would pay for shipping or an Email transfer with an attachment
would work well too.
Thanks.....Peter, VA3PK

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

You are asking for a long, long dissertation.
it is possible, it is not easy.
Most of the time that people get connected they simply blow the pass for other people.

first it is possible to connect with five watts and decent settings on your tnc
second it is not possible to (most of the time) to continue the connection due to
qrm(m=manmade).
third if you get connected and can't get an acknowledgement packet back you time out the
tnc making it
impossible for anyone else to connect usually for the rest of the pass. (The way the
cosmonauts have the
tnc set now it times out in about 90 seconds) allowing 3 to four timeouts per pass.
fourth the cosmonauts use the tnc to communicate with people on the ground (so jamming up
the tnc with messages to
your neighbor next door constantly becomes a problem for them). Please remember it is their
tnc how would you
like your mailbox filled with junk for your neighbor.
fifth when the packet is running and Mir is over the US is the only time anyone has a
chance to work Mir, so
obviously the limited availability is a problem for everyone..
sixth when someone is connected to the PMS sending constant requests to connect or jamming
up the frequency with
constant beacons or calling on voice (while the cosmonauts are asleep) or digipeating to
your next door neighbor
or beaconing aprs info constantly, IS CAUSING INTERFERENCE BY THE FCC DEFINITION.
seventh Everyone is entitled to contact the Mir space station's Personal Message Service.
and the Cosmonauts and
the astronauts love to hear from everyone, and it would be possible for all to leave
messages, EXCEPT FOR THE

CONSTANT INTERFERENCE.
eighth WITHOUT CONSTANT INTERFERENCE anyone with 50 watts and a ringo ranger would be able to connect, leave
a message, get a listing, and perhaps even get a message from an extra terrestrial..
ninth since the availability of the space station's pms is so short. please respect other people's wishes and make your
connect quick, and get it over with (it isn't always possible due to shifting polarization, qrn, etc) but don't list the pms
several times, read and reread the same message several times over, read everything in the box, get the Mheard listing
several times, etc (I know some of you hams aren't as nasty as the newsgroups imply)
tenth Operate wisely.. watch for someone to disconnect, (log out), timeout, before trying to connect, (you can't connect while
someone is in the mailbox) and be quick when the opportunity arises. Try to get others you see causing interference to stop.
Try to use your radio responsibly.
Learn how packet operates and make sure your station is set up to receive and transmit to weak stations, find a
distant packet node and improve your station until it can reliably use it, then find one more distant and try it..
eleventh On voice don't call unless you can hear. I constantly hear people calling for R0MIR when he is busy talking to
someone.. there is no better way of making sure your call will not be called.. The cosmonauts hate interference with
conversations they are having and several crews have shut the radio off because of just such INTERFERENCE.

twelfth Polish up that lucky charm.. because even if you are the best operator in the world and have the best station with the
most power, and have important news for our friends up there, luck still has to be with you.. many many extenuating
circumstances and external factors cause things to happen and you might not make it when you feel you have to.
Right now I have a message from Alex and I couldn't get connected to get it (I was a nice guy and let someone
with "traffic" go first) and didn't have enough time to read it after I sent my "traffic", and it may be killed before
I get a chance to read it, but that is the the nature of the beast. Don't get angry just have eternal patience..
Finally

I know from experience only 4 of 10 people will read 50% of this, and of them only 1 will listen to what I have said, so that
will leave 9 who continue operating badly, causing interference and so keeping many people from getting the chance to contact
the cosmonauts, the only way I know to help is to personally contact anyone who is causing interference and nicely tell them
that there is a better way to operate, give them assistance, help them to understand that is is only themselves and the
cosmonauts they are hurting..
Check out my Web page for further information Particularly the Mir files and information

link
Best Regards to you all

2089. microwave EME

Newsgroup: rec.radio.amateur.space
Date: 1996-10-15 00:00:00 UTC
From: craigivey@aol.com
Message-ID: <541936$q19@newsbf02.news.aol.com>
Source record: 21172

I'd like to get some info on working microwave EME. (Yeah, I know, EME is not as easy as it sounds.)

What would it take to use the microwave band(s) with EME?
How much power would I need?
Is the equipment readily avalible?

Please reply via e-mail.

Thanks,

Craig

2090. NG Bloat thanks to "Daily Digest"

Newsgroup: rec.radio.amateur.space
Date: 1996-10-15 00:00:00 UTC
From: amcleod@anjo.com
Message-ID: <414.565.39@anjo.com>
Source record: 21173

It looks like some ninny at UCSD has decided to do us all the favour of preparing a "Daily Digest" of this NG. While such a digest may be useful to those who don't actually gt th NG, the digest is actually beeing posted back to r.r.a.s!

This mans that all NG articles re-appear a few days later in the "daily digest" and now, the digests themselves are apparing in later digests!

I've sent several pieces of e-mail to various addresses @ucsd.edu to no avail. True, I could just stick an entry in the kill-file, but surely there's a better way?

Does anyone have any suggestions?

It seems that mode KT is in use with downlinks on both 2 meters and 10 meters. The transponder is always on as I have had lots of successful RS-12 contact over the weekends.

In article <325f1a69.1253520@news.intercenter.net> Sam Cederas,
scederas@intercenter.net writes:
> Thanks for posting his call. I was not sure what it was. I
>heard him talking about his daughter in Indiana or something like that
>during a pass early Friday A.M. around 2:40am EST

John's daughter goes to Purdue University in Indiana.

> Who is John? I guess he is an american onboard MIR???

John Blaha is an extremely experienced astronaut with four previous
shuttle missions, plus his ongoing stay aboard Mir. He's been there
about a month now. In January he is scheduled to be replaced by
astronaut Jerry Linenger.

>Also ... what is the QSL information for MIR....I connected and left a
>hello message via packet on ROMIR.

Dave Larsen, N6JLH, is the US Mir QSL manager for contacts made with Mir
crew members. QSL cards must include date, time, and mode of contact.
Cards
for SWL reports will not be handled by Dave. If a contact is made with
the
Mir packet radio personal message system (PMS), then the message number
issued by the PMS should be included on the QSL card.

QSLs must be sent along with a business-sized self-addressed stamped
envelope (the card will not fit in a regular-sized envelope).

QSLs should be sent to:
David G. Larsen, N6JLH
PO Box 1501
Pine Grove, CA 95665
USA

>Also what is the UHF frequencies for MIR and what are they supposed to
>be used for.

The following are the SAFEX 70 cm frequencies for the three SAFEX
operating Modes.

Mode 1: FM repeater with CTCSS subtone 141.3 Hz.
Downlink 437.950 MHz
Uplink 435.750 MHz
CTCSS

Mode 2: 9600 Baud (G3RUH compatible) Packet Operation.
Downlink 437.975 MHz

Uplink 435.775 Mhz
No CTCSS

Mode 3: Pre-recorded digital voice beacon, and may be used for contacts
with the Mir crew.
Downlink 437.925
Uplink 435.725
CTCSS

Message-ID: <53v5ml$390@newsbf02.news.aol.com>
Source record: 21263

Does anyone know of any APT Shareware that actually works? I've tried SBDSP,FTV,and Channelx. They're supposed to work through the soundblaster (yeah,right).No luck...Not even close..JVFAX7.1 looks promising, but you have to build an interface that's more complicated than NOAA-14 itself ! Any ideas? I have AEAFAX2 with it's interface.I was thinking of building a simple op-amp 1800hz tone generator, and frequency modulating it with the audio from the satellite.This would fool the software into thinking it was decoding HF Fax. Is this possible? Any ideas for a schematic? Thanks.

From: KD1YV <jimkd1yv@ix.netcom.com>
Subject: Info on Mir crew activities?

Does anybody on the group know, or know where I can obtain an indication
of the daily schedule of the Mir crew? What I am trying to determine is
the times that would be likely and/or unlikely for a voice QSO,
corresponding their free time with the available passes in my area.

Is the Mir crew large enough that somebody is on duty 24 hours (like a
7-11, the doors are never locked :-), or do they all sleep and eat at the
same time each day. Do they operate on a 24 hour rotating schedule, or
is their day shorter or longer? In other words, a couple of weeks ago, I
heard John Blaha telling somebody in a QSO that he was having a lunch
break, at about 07:15 EDT (my time.) Is it safe to assume that their
lunch break is always going to be about 07:15 EDT or equivalent? Etc.

The crew lives on Moscow time and all sleep at eat togeather. They do at times stay up
late.. sometimes for a purpose sometime
because of inability to sleep I think.. they sleep from approximately 3:30-4:00 edt untill
about midnight edt. I have heard them on
voice at 7:00 PM edt though . the best time to catch them is in the morning, they do
exercises and they were able to talk on the
radio while munching and doing exercises.. Aleksander Serebrov used to talk on the radio
while riding the exercycle..

There are only three on board at this time though I have been told Mir would hold up to six

people comfortably..
their schedules are apt to be dictated by ongoing experiments, and communications schedules, from my understanding..

: Regards,
: Rolf

Hi Rolf,

Isn't that what I said?
You had me quite worried for a moment. I know the URL went out wrong in the last journal, but I did type it correctly here. The journal error was because someone else thought that .org.uk must have been a mistake and consequently all occurance of www.rig.org.uk got changed to www.rig.org.

Anyhow as the guy who maintains the RIG web pages I ought to know what the URL is, but you did get me worried about typos.

Whilst we are on the subject I am looking at a serious update of the RIG web pages and am learning Java in the hope of writing an online wx sat reception demo.

If anyone has ideas about what they'd like to see on the RIG web pages then drop me a line. We won't hold more pictues as we feel that there is an abundance of sites carrying images.

If I ignore emails over the next week it's because I won't be here.

Regards J.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking
that this fellow has fallen from his rocker and can't get up. Nope, it's
time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on
all the analog birds, especially AO-13. It will be held the third weekend
of this month starting at 0001 Saturday going until 2359 Sunday. All
times are local and there will be some activity starting Friday afternoon
and finishing Monday morning because of DX. If you want more info or set
a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the
0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ
was busy with an experiment at the time. Alexander told me the conditions
are nice and warm on MIR. Temp between 70 and 75 degrees F and they have
having lots of fun.

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

Subject: DC/MD/VA RA Enthusiasts?

I'm looking for people in the DC metro area who are interested in, or
already active in Amateur Radio Astronomy. I would like to combine
expertise and resources to construct and operate an RA site, and
conduct data analysis.

Followups or email OK.

Subject: KANSAS CITY TRACKER

Hi I just recently bought a KC Tracker at an estate sale.
When I bought it, I did not realize that I also needed the
accompanying software disk. If u have this disk I would appreciate a
copy. I would pay for shipping or an Email transfer with an attachment
would work well too.
Thanks.....Peter, VA3PK

In article <53v5ml$390@newsbf02.news.aol.com>, cloud78572@aol.com (Cloud78572) says:
>
> Does anyone know of any APT Shareware that actually works? I've tried
>SBDSP,FTV,and Channelx. They're supposed to work through the soundblaster
>(yeah,right).No luck...Not even close..JVFAX7.1 looks promising, but you
>have to build an interface that's more complicated than NOAA-14 itself !
>Any ideas? I have AEAFAX2 with it's interface.I was thinking of building a
>simple op-amp 1800hz tone generator, and frequency modulating it with the
>audio from the satellite.This would fool the software into thinking it was
>decoding HF Fax. Is this possible? Any ideas for a schematic? Thanks.

I have used FTV and had good results through an 8bit "value" SoundBlaster.
Currently I use WXSat(by Christian Bock). WXSat is a windows based program.
you can find it at "http://www.ourworld.compuserve.com/homepages/hffax"
(I think the WWW belongs in there).
JVFAX 7.0 has a "simple" front vco front end for the uA741 "converter".
It has been awhile since I built it but I think it used the EXAR 2201
ic. The "front end" has an isolation transformer, a full wave bridge
and the vco. Worked pretty good. But regardless of what demodulator
program (either hardware or software) you have to have a good clean signal
(ie good antenna with a preamp) and the reciever should have the proper
IF bandwidth. While I got results that were good enough to keep me going
with a diskcone, and a stock Pro2004 (in the wfm mode), adding an antenna
designed for 137.5(with an ancient but good MOSFET preamp) and adding
and outboard IF strip (to get the proper bw) made the difference between
day and night. Even with a good clean signal, if the BW is too wide, your
signal still has a poor signal to noise ratio. (this shows up as "grain"
and compressed grey scale).
If JVFAX 7.1 does not have the VCO front end, email me and I will try to dig
the diagram out of my archive(a fancy name for the mess that passes as my
"library") and send it to you via email. JVFAX 7.0 has a transfer curve for
the front end and it is pretty linear. I did not expect it to work, but it
was so simple that I had to try. By adding a DPDT swith to the output of
bridge I had a way to instantly invert the "video".
BTW a proper antenna need not be expensive. My first 137.5 antenna
consisted of 2 dipoles (mounted at right angles) connected directly to the
preamp. (with no phasing harness) The phasing harness helped reduce the
"nulls" in the overhad pass.
Terry
As always, your mileage may varry.....

2098. Catalogs for Satelite equipment

What modes are used by RS-12 besides K mode, is KA or KT in use. Is the transponder on all the time, or is it limited to tuesday through friday.

2101. NORAD Two-Line Orbital Element Sets (TLE884)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-16 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <541amq$s5@blackbird.afit.af.mil>
Source record: 21176

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Source record: 21178

Ed,

I have worked RS-12 a fair bit during September. It used 15 m up and both 2 m and 10 down. I used a 10 m receiver, but people that picked me up on 2 m generally reported a better signal.

BTW - the beacon will usually tell you what mode the bird is in. try 29.408 (+/- doppler)

73 de VE7MDL ....Erik.

From: KD1YV <jimkd1yv@ix.netcom.com>
Subject: Info on Mir crew activities?

Does anybody on the group know, or know where I can obtain an indication
of the daily schedule of the Mir crew? What I am trying to determine is
the times that would be likely and/or unlikely for a voice QSO,
corresponding their free time with the available passes in my area.

Is the Mir crew large enough that somebody is on duty 24 hours (like a
7-11, the doors are never locked :-), or do they all sleep and eat at the
same time each day. Do they operate on a 24 hour rotating schedule, or
is their day shorter or longer? In other words, a couple of weeks ago, I
heard John Blaha telling somebody in a QSO that he was having a lunch
break, at about 07:15 EDT (my time.) Is it safe to assume that their
lunch break is always going to be about 07:15 EDT or equivalent? Etc.

The crew lives on Moscow time and all sleep at eat togeather. They do at times stay up
late.. sometimes for a purpose sometime
because of inability to sleep I think.. they sleep from approximately 3:30-4:00 edt untill
about midnight edt. I have heard them on
voice at 7:00 PM edt though . the best time to catch them is in the morning, they do
exercises and they were able to talk on the
radio while munching and doing exercises.. Aleksander Serebrov used to talk on the radio
while riding the exercycle..

There are only three on board at this time though I have been told Mir would hold up to six

people comfortably..
their schedules are apt to be dictated by ongoing experiments, and communications schedules, from my understanding..
Have fun//

Subject: KC5TZQ active on MIR tonight

John was very active during the tow passes i listened to. I worked him on the 0700utc pass over North America. I was using and FT-736 and a 160 2 meter brick into a 1/4 wave vert. John likes to talk about baseball and astronomy. The passes seem to be very active over the US and Canada during the 0400and 0700utc time frame. I have worked both R0MIR and KC5TZQ during these time periods. 73 de BJ Arts WT0N

Hi Phil!

The latest news that I have is April of 1997 for launch. Hope so anyway!

Certainly. Many amateur radio ops use tcp/ip over packet. But you
might want to post this question to the digital group, or subscribe
to the nos-bbs list (nos-bbs-request@hydra.carleton.ca, I think).

From: Mark McGregor <kb9khm@expert.cc.purdue.edu>
Subject: Weather Sat. Info

I'm looking for information on weather sats (NOAA 12 & 14). I've
looked at NOAA's pages and didn't find them real handy. Does anyone
know of any web pages or other sources of info on the net where I
could find out more about these satellites? I am wanting to know
what equipment it would take to receive images from these birds.

Thanks

Mark <KB9KHM>

: Regards,
: Rolf

Hi Rolf,

Isn't that what I said?
You had me quite worried for a moment. I know the URL went out wrong in the last journal, but I did type it correctly here. The journal error was because someone else thought that .org.uk must have been a mistake and consequently all occurance of www.rig.org.uk got changed to www.rig.org.

Anyhow as the guy who maintains the RIG web pages I ought to know what the URL is, but you did get me worried about typos.

Whilst we are on the subject I am looking at a serious update of the RIG web pages and am learning Java in the hope of writing an online wx sat reception demo.

If anyone has ideas about what they'd like to see on the RIG web pages then drop me a line. We won't hold more pictues as we feel that there is an abundance of sites carrying images.

If I ignore emails over the next week it's because I won't be here.

Regards J.

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: WWW: Used Microwave Components

Hi.

Special Discount for rec.radio.amateur.space readers!

Take an extra 20 percent off microwave compenents;
filters, attenuators, waveguide, couplers, etc. until
the end of September off our very low prices.
30 day money back guarantee, as always.

http://www.valuerocket.com/microwave.html

I have been building a microwave lab, and have extra
gear to sell. Limited Quantities.

Tim

Subject: JOTA (the hut?)

Well folks it's that time of the year again. Puzzled?, confused? Thinking
that this fellow has fallen from his rocker and can't get up. Nope, it's
time for JOTA, Jamboree On The Air. This year I'm hoping for contacts on
all the analog birds, especially AO-13. It will be held the third weekend
of this month starting at 0001 Saturday going until 2359 Sunday. All
times are local and there will be some activity starting Friday afternoon
and finishing Monday morning because of DX. If you want more info or set
a sked, e-mail me.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Subject: R0MIR active

I just worked R0MIR as the MIR space station passed over the USA during the
0700 UTC pass. I talked with Alexander and we had a nice long QSO. KC5TZQ
was busy with an experiment at the time. Alexander told me the conditions
are nice and warm on MIR. Temp between 70 and 75 degrees F and they have
having lots of fun.

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

2107. NOVA or Micro Orbiter 3.0 opinions....

Newsgroup: rec.radio.amateur.space
Date: 1996-10-16 00:00:00 UTC
From: mdim@intranet.GR
Message-ID: <9610160909.AA05286@lotos>
Source record: 21182

Dear Amateurs

I am planning to buy a new sat. software tracking program and I need your opinions.
I 've seen the adver. of" Micro Orbiter 3.0" from Precision Software Solutions for 49.95 $ plus 4.00 for S & H, in the Satellite Times Magazine and I have also seen the adver.of" Nova" for $ 50.00 for AMSAT MEMBERS (that I am) in the Amsat Journal that I receive every 2 month.
C
I am currently using the "Instant Track" with a 486 at 100MHz.
I need the pros and cons for those two software from any possible users.

My warmest thanks to all of my fellow hams that will take the time to respond and help me out with my decision.

From: BJ Arts <bjarts@uslink.net>
Message-ID: <01bbbb4c$8afbffa0$16bc92ce@bjarts.uslink.net>
Source record: 21183

I am trying a demo copy of NOVA and I like some of the features, but don't like other when I compare it to Instant Track.
Likes:
1. I like the multiple sat tracking and also you can pick the groups of SATs that you want to track.
2. Set up is very easy and it works nicely with the Win95 OS.
3. Kep updates are as easy as Instant Track., even easier since it is point and click.

Dislikes.
1. No doppler shift readout.
2. Readout on screen is too small to read easily, unless you sit at the computer. Instant Track has uses much bigger fonts.

Other things.
I like NOVA and with the demo it seems to setup for my Yaesu 5400b az./el rotor and work under Win95. Very easy setup. Instant Track seems to have some problems with WIN95 for rotor control setup.

I'm not sure if this program will be able to use the tuning controls to tune radio for doppler. I do not see any input setting for beacon freq. and no doppler readout. If this is the case, might be I've missed it, then the program might not be all that useful for PacSats.

With the readout so small, If you are across the room form the monitor, you might miss information if you are doing a manual track with rotor.

I hope this helps some 73

2109. Mobile antenna info

Newsgroup: rec.radio.amateur.space
Date: 1996-10-16 00:00:00 UTC
From: JBOWES@CEU
Message-ID: <JBOWES.3.000DBE4A@CEU>
Source record: 21184

Dear all,

PLease if anyone knows of any info in web pages, ftp sites etc etc that is relevant to mobile antenna construction for MIR monitoring I would be most pleased to hear from them. I have 2 books on antennas but more towards HF amateur band antennas. English amateur books are almost non-existant here too. I'm thinking of some alternative design to 1/4 wave construction. Any ideas people ????? Also thinking about constructing some kind of 10m mobile whip.

Thanks alot for time.

2110. Re: NOVA or Micro Orbiter 3.0 opinions....

Newsgroup: rec.radio.amateur.space
Date: 1996-10-16 00:00:00 UTC
From: Mark Fossum <n0nsv@amsat.org>
Message-ID: <3264EAA9.67FD@amsat.org>
Source record: 21185

Hi Michael:

I've been running Nova for a few months now. I use it with Win95 on a 66Mhz machine. The Windows version of Nova hasn't got any tuner in it yet. They tell me there will be an add-on for it later.

I really like the multiple satellite tracking and scripting. I could think of a few little bells for it, but if there was one thing that I would like to see, it would be larger fonts for manual tracking. (Maybe some color behind certain numbers to break things up and make it quicker to find what you're looking for.) Since I do lots of manual tracking, it's a little tough.

Setup was easy and you can get ahold of the authors by email anytime. They are helpful and patient. (Major plus)

Good luck on your decision!

Mark Fossum - N0NSV

Interested in microwaves? Operate on frequencies above 1 GHz?

Want to know more about the SHF bands?

Then point your web browser at: http://www.pacsat.demon.co.uk

The European Microwave News is published on a regular basis and is
dedicated to microwave operations across Europe.

The newsletter is available by email subscription or the web.
It carries news, letters of interest, band reports, operating
information, sales and wants and much more.

Its free to everyone by simply accessing the url or
by sending an email to: emn@pacsat.demon.co.uk
with the words 'subscribe' in the text.

The web site also carries much more information about the bands above
1 GHz and is being continuously updated.

Interested?

Send me your subscribe message now and I will send you the latest
issue, or alternatively, point your browser to www.pacsat.demon.co.uk
and download the web version!

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

Could someone please tell me the exact commands and protocols for connecting up to the automated MIR packet system? Do you type "C R0MIR" and then give a signal report if MIR responds to you? I simply wish to make a real quick QSO with MIR. Not interested in digipeating or leaving lengthy messages. Also, exactly how do you sign off? A simple "d" or "bye"? Thanks for answering my basic questions. I'd like to try a MIR contact but don't want to get on until I know the right procedures. There's enough QRM already I guess. 73 de John, KI7JB.

Dear Amateurs

I am planning to buy a new sat. software tracking program and I need your opinions.
I 've seen the adver. of" Micro Orbiter 3.0" from Precision Software Solutions for 49.95 $ plus 4.00 for S & H, in the Satellite Times Magazine and I have also seen the adver.of" Nova" for $ 50.00 for AMSAT MEMBERS (that I am) in the Amsat Journal that I receive every 2 month.

I am currently using the "Instant Track" with a 486 at 100MHz.
I need the pros and cons for those two software from any possible users.

My warmest thanks to all of my fellow hams that will take the time to respond and help me out with my decision.

A connect to Mir's PBBS is: C R0MIR-1. To disconnect type b or d. Do
not try a connect while someone is still connected, it can only handle ONE
connect at a time. Wait until you see a DM then go for it, FAST!
If you do get in type SP R0MIR, then your message. Wait for a message number
back.

To connect to the keyboard it's: C R0MIR but don't expect a response back
from around 2000 to about 0500, most of the time they are asleep.
Good luck!

2 More FREE DigiDay Calendar programs

They just keep coming!

Vision X has teamed up with the folks at StarDate (the nationally syndicated radio program about space) and Amazon.com (the premiere bookstore on the Internet) to add two new exceptional titles to their already growing list of daily calendars.

Title: 365 Days of StarDate (available 10/1)
URL: http://www.visionx.com/ddstar.htm

Get your night sky episode every day! Based on the popular nationally syndicated radio program, StarDate provides a daily dose of fun astronomical facts and figures. Check out the screen design its out of this world!

Title: 365 Days of Amazon Book Reviews (available 10/2)
URL: http://www.visionx.com/ddbook.htm

There are over a zillion books in print and hundreds of new ones are published each day. Enjoy the convenience of having the Amazon staff separate the wheat from the chaff. Only the highly recommended make this list.

Coming Soon:

Vision X is very excited to announce the partnering with Windows95.com. The first calendar, Steve Jenkins Windows 95 Tips & Tricks is due out October 15th. Steves Shareware of the Day WINners will follow in December.

Also, look for the much anticipated 365 Days of Great Words to Know, 365 Days of MovieMania and 365 Days of Whats So Funny in November.

Current Titles include:

365 Days of Classic Quotes
365 Days of Off-the-WallPaper
DigiDay Site of the Day
Classic Quotes Screen Saver
DigiDay Clock
DigiDay Reminder
DigiDay WallBrowser

Subject: AMSAT APRS and other ham files

The Western North Carolina APRS Home Page
---
http://www.bluenet.net/ke4htm

Automatic Packet/Position Reporting System's use has
really started to grow among the amateur radio community.
Over the past few years I've watched APRS really take off.
I was always discouraged, since there was no place to
get the files needed to run APRS or be on packet. So I
thought let's make a APRS page and offer not only APRS files
but other packet programs to. So I did. The page is young
but the files and brand new and the links are the hottest
ham links on the web. Come on by and take a look and drop me
some e-mail to let me know what you think.

A nice page...it puts a lot of good stuff together in one place.

However, I think what we need for shuttle audio is for someone with a satellite dish to set up another RealAudio server (and NASA TV frame grabber and/or CUCme server). Whenever anything interesting is happening, the poor web site at the Houston Chronical goes to its knees, as does the shuttle web site at KSC.

<sigh>

Subject: HELP! Is shuttle audio available in Seattle?

In article <51sk9n$ho@pulm1.accessone.com> Michael Rivero, rivero@accessone.com writes:
> I can't believe it! There doesn't seem to be a relay for the shuttle
>audio anywhere in the Northwest. The AMSAT list shows no entries for
>the states of Washington, Oregon, Idaho, or Montana.

The best thing to do is get a local amateur radio club to retransmit the shuttle audio via a local repeater, and even better would be to also transmit amateur television.

As a guess the repeater site would have enough room for a 7 foot satellite dish (a real one, not one of the wimpy little dishes which doesn't have NASA TV available). Any decent techie can scrounge together the parts for a simple C-Band dish, recevier, and other components for a couple of hundred dollars. Add a phone patch with a remote controller and you're done.

In the Kennedy Space Center area John Anderson K4GCC has been transmitting NASA audio continiously from start of countdown through landing on his 146.94 Mhz repeater for every mission since STS-7 in June 1983. (other than hardware problems, local nets, or other technical issues).

LISATS, the local amateur television group has an amateur television repeater (K4ATV - 421.75 Mhz. out) with user switchable NASA TV.

If it doesn't exist - don't complain about it - do something about it.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (96268.24045518)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

Subject: Opinions on satellite tracking software wanted

Hello to all,

I've just upgraded my old 286 (finally..!) with a brand new computer
running Windows95. On my piece of antique I was using STSOrbit and
Traksat for my modest satellite activity (RS satellites and NOAA
reception). With my new machine I'd like to use a satellite tracking
program that works under Windows. I've been told about Logsat and

WISP. Has anyone out there had any experience with them? Do you have
any others you can suggest? I'm looking for either shareware programs
or commercial ones (if they are worth the price). Any comments are
welcome!

Subject: logsat

Rob,

<<<
When the user browses through a list of satellites, show him the object
numbers and associated names as they appear in the current keplerset.
When he selects one of these objects for future tracking, write only the
object number to his configuration file, not the name.
>>>

Again, we will not display satellites by catalog number. Numbers are not
made to be understandable by man, that's why we also assign NAMES to the
satellites. If you're a ham and you're tracking ao13 & rs-12 & rs-15 &
ko-25 & noaa10 & noaa14, or if you're in the navy and are tracking gps-bi01
& gps-bi02 & gps-bi03 & gps-bi04 & gps-bi05 & gps-bi06, or you're in
telecommunications and you're tracking Gorizon-14 & Intelsat-601 &
Intelsat-602 & Intelsat-603 & Telstar-401 & Telstar-402, etc... you're not
going to know the satellites by catalog number, you're going to recognize
them by NAME. Logsat will thus use names to identify satellites.

<<
Whenever the satellite is being tracked, read the elements from the current
keplerset by object number, and display the name found.
When the name in the keplerset changes, so does the name on the display.
>>

We can't do this: You are used in seing AO13 in the list of selectable satellites. You change your source of keps, update and.... your familiar AO13 disappears from the list. A new Oscar13 instead appears at the end of the list, but you won't know unless you dig in the list.

<<
When updating keplersets by adding additional data, only use the object number for identification of data. Don't look at the names, but just write the names in the keplerset file just as the other data is written. You will never have a double name because each object number can be present only once, and can have only one associated name.
>>

You will not have double names, but will have familiar names which might disappear.

LogSat is not only used by people like you and I, who know what catalog numbers are, but also by several users who don't know what they are, and don't want to know. All they need is to track their gps-bi03, or their Eutelsat 1. LogSat tries to be as user friendly as possible, and one of the things necessary to do so is to use names rather than numbers.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Subject: sarex freqs on mir ?

The other night, 10/8 about 3am est, a MIR post was read over
the air discussing a 9600 baud paket frequency set. The
frequency's mentioned were 437.975/435.775, and 437.925/435.725
with a pl 141.3 (which I monitor every pass and have heard
nothing). I know about the later but not the former. Anybody
know anything about this ? If anyone hears anything on either
set let me know.

2125. ic-820/821 out-of -band mods?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-18 00:00:00 UTC
From: Rafael Garcia <"rafael "@sat.cide.upm.es>
Message-ID: <547hcn$ar@sanson.dit.upm.es>
Source record: 21200

Hi all,

I would like to know if there is a way to extend the UHF band of
IC-820/821 Icom radios.

I do know VHF band is capable to receive 136-150 MHz, but nothing about
UHF.

Thanks in advance

Rafael

2126. Path of RS-10

Newsgroup: rec.radio.amateur.space
Date: 1996-10-18 00:00:00 UTC
From: baack@maine.maine.edu
Message-ID: <54819v$15t4@sol.caps.maine.edu>
Source record: 21201

Greetings all,
I was wondering about the path of rs-10. It seems that the best pass for my location (FN54kd) ((Camden, Maine area)) Seems to be in the early afternoon. 1-3ish? I was wondering if this "changes". I realize that the satellite changes its orbit, thus the need for new Keps... however, MAJOR changes happen approx. how often, a month? A week? 6 months?
(ex.. a good 2 pm pass has now moved to a good 4 pm pass)

Any help/ ideas?

All I can say is Nova all the way! I have tried them all, and nothing
beats nova.

A demo copy of Nova is available from my web page if you want to try it.

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps - NEW INFO!

The URL to use is:

http://www.trucom.com/ppages/marty

I have just today (17 OCT) updated the pages to include a Frames Version that makes navigation around the site easier. Note that the non-Frames Versions are still there but the URLs have changed.

Thanks!

Take Care & 73

2134. Running OFS WFax Software in a DOS Window

Newsgroup: rec.radio.amateur.space
Date: 1996-10-19 00:00:00 UTC
From: jwhac4ca@atl.mindspring.com
Message-ID: <3268c412.2075895@news.mindspring.com>
Source record: 21209

Has anyone figured out how to run the OFS WFax software in a DOS Window from Win95 and still get more than two megs of XMS memory?

I have configured the DOS Window to allow 8M of XMS memory, but when OFS comes up it still uses only 2M. This limits the amount of data you can store on a pass to 2M. The only way I can figure out how to get more memory is to run the software in DOS Mode. This approach works fine, but is handicapped by having to restart Win95 upon exiting WFax.

Or better, does anybody know of any Win95 software to run the OFS PCMCIA card?

Regards -John

Yes, the LMR cable does require a special connector. Your cable dealer
should have them... or contact Texas Towers (TexasRF@aol.com)
(800/272-3467)... they have them in stock.

First off, as a new HAM (KF4LDO), I thought it would be as simple as getting my license and a radio...well I've had my license since the end of July and STILL haven't bought a radio...why you might ask? Because everytime I think I've settle on a radio, I hear about something else you can do with Amateur Radio! :-) Blows my mind and it's definately excited.

Now I'm coming to you to learn more about satellites. I understand that at times one can speak with Shuttle Astronauts on 2M SSB. AM I correct on this? You can also talk with Cosmonauts on Space Station Mir. And I have heard of satellites that act as crossband-repeaters. Am I right on this? Can someone enlighten me a little more about what can be done?

Knowing this, it looks like a good radio would be a 2M Multi-mode radio. Perhaps the Yaesu FT-290? Seems to be relatively inexpensive, mobile, and very durable. Any other opinions?

Any help appreciated!

TIA,
Grady
KF4LDO

PS-Please don't limit to things that only Techs can do...working on Morse!

>I was just wondering, what the price per pound on the average commercial
>companies pay NASA to send their equipment into orbit.
>I would think it would vary depending on the type of orbit too.
>Does anyone have any facts on this?

The answer is zero dollars per pound. The last "commercial" satellite launched by NASA was the Palapa B2P satellite on a Delta rocket in 1987. The Space Commercialization Act of 1986 got NASA out of the business of rocket launches, turning it over to commercial industry. The exceptions are launches which specifically require the shuttle's unique capabilities, launches of national security payloads, and "other compelling reasons."

The typical price to take a commercial rocket to low earth orbit is in the range of about $4000 per kg.

To a more-typical geosynchronous transfer orbit a Delta 7925 retails for about $50 Million, an Atlas IIAS goes for about $115 Million, and half of an Ariane 4 goes for about $75 Million.

As an example, AMSAT has announced that it is paying approximately $1.5 Million to ESA for the launch of the phase 3-D satellite and suport hardware (about 500 kgs.) to a geosynchronous transfer orbit for the AR 502 launch. This is a discounted rate because it's a test flight. (Since test flights have a very high tendency to get delayed, and are considered riskier than operational missions they're sold at a discount.)

Extra, working 4 channle Instrumentation Recorder, For Sale.
Excellent for monitoring and recording real-time data,
for example: SETI research, signal analysis, monitoring,
recording and playback of scope and analyzer signals.
Excellent for serious researchers and experimentalists.
However, not something the average person might have next
to the Netscape window and mouse pad.

Good Working Condition, HP-IB interface, dust cover removed.

Model: HP 3964A
Desc. Instrumentation Recorder
Channels: Four
Tape: 1/4" reel-to-reel
Speeds: 5 Speeds: 15/23, 15/16, 1 7/8, 3 3/4, 7 1/2 & 15
Calibration: 6 voltage calibration level, switchable meter for channels
Remote Control: Both IEEE-488 (HPIB) and standard (centronics)
Options: 002, 003, 004, 007, 026, 041
Manual: Yes

HP Orig. List $11,000.00 (without options)
ValueRocket Sale: $ 3,500.00 (with options :-)

Time Limited Offer.

Best Regards,

Tim

Well, I was using Nova until this last shuttle mission. I could not add the Shuttle to the database. I could enter the info, select the sat and it always showed up as the sun.

Also there are some bugs on the reports.

Get STS Plus. It's a great package.

2147. NORAD Two-Line Orbital Element Sets (TLE886)

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2148. Comprehensive frequency list ??

Newsgroup: rec.radio.amateur.space
Date: 1996-10-22 00:00:00 UTC
From: Klaus Lutsch <lrt20892@rpool12.rus.uni-stuttgart.de>
Message-ID: <Pine.A32.3.94.961022074648.21431A-100000@rpool12.rus.uni-stuttgart.de>
Source record: 21123

Hello de dl8ser, name is Klaus.

Since I am new in the newsgroup business I do not know if there
were previous postings concerning satellite frequencies.

What I'm looking for is a comprehensive compilation of
frequencies used by both LEOs and GEOsats no matter whether
they are still in use or died away in orbit.

What I would like to try out is some sort of "satellite archeology"
I have learned that from time to time some satellites enter
a better sunangel and hence get enough power to revive for
a short periode of time.

So if there is anybody who knows of such a list I woul'd be very
glad if this list could be made available on this newsgroup.

I would also be happy about additional information and comments
about my project.

e-mail LKlaus@studbox.uni-stuttgart.de

2150. Mode K antennas?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-22 00:00:00 UTC
From: tkenny@qsun.ho.att.com
Message-ID: <326ee02d.334754083@nntpa.cb.lucent.com>
Source record: 21125

I've been trying to make my first satellite contact on RS12 via mode K (15m up, 10m down) and would appreciate antenna advice for operating this mode.

For now I'm just using a G5RV in simplex mode. The dimensions of my yard is something like 80' by 120' I was hoping that I could build some wire antennas that would help with the fading and be omnidirectional.

Any advice would be appreciated.

73, Tom Kenny KB2GLO

If you can get a copy, look in the August 96 issue
of QST for an article on Quadrafilar antennas that
look to be well suited to this application.

2152. UHF/VHF Multimode choices

Newsgroup: rec.radio.amateur.space
Date: 1996-10-22 00:00:00 UTC
From: marv <MarvS@postoffice.worldnet.att.net>
Message-ID: <326C9439.78A7@postoffice.worldnet.att.net>
Source record: 21127

I've finally saved enough money to put together a UHF/VHF multimode station and would like some opinions on what radio to purchase.
I'm planning on using the station for UHF/VHF contests, packet (incl. 9600 baud), and working the present and future amateur satellites.
As of now I am leaning towards the new ICOM IC-821H, but I haven't ruled out the TS-790A or Yaesu FT-736R. Obviously I'd be adding amplifiers for use during contests and possibly for the satellites, and a 9600 baud ready capability should be present.
Some of the local hams I have asked have said that using Down East Microwave transverters with my TS-940SAT is THE best way to go for contesting, but doesn't give me a satellite or 9600bps packet capability.

Any Ideas..or experiences with any of the multi-mode radios would be appreciated..

Thanks & 73's

Marv (WA2BFW)

2153. Packet and IC-2000

Newsgroup: rec.radio.amateur.space
Date: 1996-10-22 00:00:00 UTC

I would like to work packet on Mir and any others that are local to me here in Colorado. I bought an Icom IC-2000H and it has a modular microphone connector on it. I have 2 questions:

1. Does anyone have the mic. pin outs for the IC-2000?
2. What hardware should I buy? (I would like to stay under $300)

Thanks,
Bob Snyder KB0YGD

Check the August 96 issue of QST. There is
an article about Quadrafilar antennas that
should work for you.

Rob,

You may want to read John's sentence again. I do not believe "they have
info and antennas for sale" is equivalent to "antennas for sale" as you
have asserted. I read what John says as stating they 1) Have info
presumably for construction, 2) Also have ads for antennas for sale.
And if one is advertised for sale for minimal cost then Victor can make
an informed decision and possibly save time *and* money.

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site for hams to post their request for over-the-air schedules. Included in the posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

I recommend getting an MFJ TNC/Mic switch box, around $40 and a KPC-3
around $120.

2159. packet connection to MIr

Newsgroup: rec.radio.amateur.space
Date: 1996-10-23 00:00:00 UTC
From: doslover@juno.COM
Message-ID: <19961022.201438.6975.2.doslover@juno.com>
Source record: 21134

Greetings all, (again)
I was wondering what the proper protocol was to connect to the Mir
packet station.
Is there a FAQ or a summary sheet somewhere?
Again, any help would be wonderful.

I use a KPC-3 for packet on my IC-2000H. The KPC-3 I got used
for $75 and works like a champ. There is a command that allows the
KPC-3 to operate with squelch open. The pin outs for the IC-2000H are
in the manual but in case you do not have it.....

1. +8V DC output
2. Frequency up/down
3. AF detector output
4. PTT
5. GND (Microphone ground)
6. MIC (Microphone input)
7. GND
8. NC (No connection)

The High Energy Transient Experiment (HETE) Spacecraft is currently scheduled for launch on October 29, 1996 from Wallops Island on a Pegasus rocket. Our low rate VHF (137.96 MHz) data transmitter on board may be of interest to radio hobbyists. This data stream will be used for spacecraft status messages and to notify astronomical observers of gamma ray burst positions in real time. This data may be received with relatively simple equipment.

The planned orbit is ~540 km altitude, 38 degrees inclination. The other elements depend on the launch date and time. The first northgoing equator crossing should occur at around 164 degrees east longitude on the Earth, about 4300 seconds after the release of Pegasus from the launch aircraft (nominally 1700 UT).

VHF signals will be weak for the first few hours, as the VHF antenna is stowed with the solar panels, which will not release until we have adequate control of spacecraft angular momentum.

For information on receiving the VHF data, visit:

http://space.mit.edu/HETE/VHFlistening.html

For general information on HETE, visit:

http://space.mit.edu/HETE/

The quadrifilar is usually used for the 137Mhz NOAA Polar
Orbiters. The Meteosat (or GOES) antennas are typically 3 - 4 Ft dishes
or Loop-Yagis.

{clip}

If you pre-arrange a contact by any means (including electronically),
then it is not valid for most awards. "Cyberscheds" will make it easy
for people to CHEAT their way into an award that they don't deserve.

Hello. I am hoping to find a source of general information about
the Mir space station. Does anyone reading this NG know to where I may
refer for such? eg. Is there another NG not specific to amateur radio?
Note:- I have no Web browser so am unable to use one of the normal
search engines to obtain any references. Any help will be much
appreciated especially as my daughter has shown an interest after
watching a few of the recent visual orbit passes. TIA.....73.....Brian

I made my first qso to MIR utilizing a kenwood tr-9130 allmode in the fm mode,

however, from what I have seen, most straight fm rigs have a 5 kc step.
There is some doppler effect that does take place with Mir, as my QSo took
place on 145.54 not 5.55. With most fm rigs you would have a choice of 5.55
or 5.50 or 5.60. I would consider an allmode rig. It gives you the advantage
oof working the sats as well in USB or CW. (plus weak signal work on VHF is
very nice..and a little different).
IMHO you can't go wrong with an all mode rig..something that you can "grow -in
to".
As, your understanding / skill / time / wallet allows.

just my .02 cents.

p.s. you can find good used allmode rigs in the $275-400 range.

Yep. But FM is OK. You don't need a SSB rig.

>heard of satellites that act as crossband-repeaters. Am I right on this?
>Can someone enlighten me a little more about what can be done?

Yep. HAMs have launched more then 30 (thirty) sat since 1968. Most of them
were active as "crossband repeaters", execpt the early ones. Some are
PacketRadio Mailboxes, some were working in FM (!)
But normally you will have to use SSB. Unfortunately the best one for
Sat-DX (AO-13 or Amsat-Oscar 13) is re-entring theese days :-((

Check www.amsat.org for plenty of information !

>Knowing this, it looks like a good radio would be a 2M Multi-mode radio.
>Perhaps the Yaesu FT-290? Seems to be relatively inexpensive, mobile, and
>very durable. Any other opinions?
>

Ouuuuuu. Satellite operation is a more expensive hobby than having some
girlfriends.....
If you REALLY will use it, you need TRX equipment for 2m, 70cm,
23cm......no limits !
As well you need beams, rotators, pre-ams, computers, interfaces, time,
much time, much more time.

But you cann as well start very liittle - listening HAM operation of
russian SpaceStation MIR or the shuttles etc. Keep watching this group for
information........and check www.amsat.org

Joe

Have used an all HF band vertical (GAP TITAN) with great success. Just
getting started. Satellite is rarely (that) directly overhead to lose
use of vertical.

Hi Tom. I used to operate via RS12 in mode K some while ago.
The antennas I used were a horizontal 15m dipole and a horizontal
loop for receive. I found it better to use seperate antennas to get
rid of mutual interefernce. It worked very well, and I was able to
get good signals back from the satellite when overhead using less
than 5W. It was great fun, and really ought to have another go at
it! Hope this is of some help....73....Brian

I'm potentially interesting in getting a Kenwood TS-790s. I've been
offered it in trade for a Yaesu FT-767GX with HF/6m/2m/70cm modules
installed. The Kenwood covers 2m/70cm/1.2 Ghz. How do the two
compare in price generally on the open market? How do they compare
for satellite use?

Thanks in advance for the advice?

I have a suggestion.

Please refer the readers to the source of the wx
GIFs. GIFs,TLEs and other files that are available from various "net"
resources do not belong in my mailbox. I and many others get our mail
in digest form and pay for the time so we do not get burdened with the
junk advertising. By including a readily available achived resource in
my mail, you burden me with having to sort through, or flush, something
I gan get, in much better form, in much better format, in a timely fashion
from several resources, at will.

Just imagine what this, or any other mailing list would look
like if everyone posted files, daily, relative to their particular
interest.

Thank you
Pete/wa4hei

Actually Glen all 29 posts were just parts of one picture... seems to me like it would be a whole lot better to just post a URL where the picture could be located. It would certainly save bandwidth and wear and tear on disinterested recipiants.

Besides, by the time anyone recieved all 29 parts, reassembled and decoded them the staelite shot would be so out of date as to be useless for anything but an archive. And there are already several WX satelite photo archives out there.

I didn't send flames to Don Mixon's mailbox because I assumed it would already be full...

But if that sort of thing continues, I for one, will simply drop the NG. Its just not worth the hassle having to delete 29 posts filled with outdated trash...

Message-ID: <199610250046.UAA24124@sumter.awod.com>
Source record: 21087

Am I in the minority or is there a group on this list tht would like to receive the weather pictures that have flooded the list lately?

I for one am not really interested in getting constant weather pictures. The eat a lot of bandwidth and consume a lot of time to down load fron the host as mail.

If ther is a group interested in receiving constant weather pictures sent to them, could this be done on another list? This list is titled Ham-Space, not weather.

My opinions only.

2222. Re: bincancel:22 large binaries:AR671:@@NCM

Newsgroup: rec.radio.amateur.space
Date: 1996-10-26 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-671.a@redpoll.mrfs.oh.us>
Source record: 21097
Cross-posted to: alt.retromod,comp.os.ms-windows.apps.word-proc,comp.os.ms-windows.programmer.controls,comp.sys.ibm.pc.hardware.chips,news.newusers.questions,rec.radio.amateur.space

Large binary posts do not belong in unmoderated discussion groups.

I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 22 cancels for large binary files (average size 84,258.4
characters - total size 1,853,685 characters) posted to 5 different
unmoderated discussion groups in the comp, news, and rec hierarchies as
follows:
9 rec.radio.amateur.space
8 news.newusers.questions
3 comp.os.ms-windows.apps.word-proc
1 comp.sys.ibm.pc.hardware.chips
1 comp.os.ms-windows.programmer.controls

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.announce. The
full report can also be found in alt.nocem.misc and alt.retromod.
Look for AR671 in the subject, or, if your reader supports it, use
this <URL:news:ARMM-Report-671@redpoll.mrfs.oh.us>

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated akr, biz, comp, misc, news, rec, or sci
(except for comp.binaries.apple2, comp.bugs.2bsd,
and rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. Then, if you like, post something
in the appropriate discussion group telling people where to find the
binary in the binaries group (a pointer to the binary). This will
permit news administrators and users to decide for themselves whether
to receive the binary files.

For more information about binary cancels, see the bincancel FAQ,
<URL:http://ursula.uoregon.edu/~geniac/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. In the interests of preventing

cross-posted flame wars, please honor the followup-to header and do
not cross-post your reply to multiple groups. Thanks for your
cooperation.

Best wishes,
Dick

Hello!
I FINALLY got my tower up!!!!!!!
I was wondering if i should worry about putting my 2m and 440mhz yagis with the rotors on the top of the tower (30feet) or leave them on the 10 foot section i have on the side? Heights are not my favorite thing, and working with a 40lbs system at 30ft is NOT my idea of fun :)

thanks!!

Nathan,

Try http://www.logsat.com/keps.htm, you'll find keps divided into
categories, including one for the GPSs.

Hi David,

As long as your sat antennas aren't obstructed by anything, I wouldn't worry
about it. What difference could 20 ft. possibly make when the birds are up
a couple of hundred miles? Put your 'terrestrial' antennas (like packet) on
the top!

To answer your other post... yes, there are keps available for the moon.
I've got some around here somewhere if you want 'em.

2235. Phase 3D Lab News from Orlando FL

Newsgroup: rec.radio.amateur.space
Date: 1996-10-27 00:00:00 UTC
From: Rick Leon KA1RHL <p3dlab@magicnet.net>
Message-ID: <01bbc42c$94994b60$LocalHost@saturn>
Source record: 21110

The members of the integration team are interested in expanding awareness and interest in P3D. We don't always have time to read news group postings but can often respond to Email to the lab.

Lab visitors are always welcome whenever the lab is open.
Lab Hours are usually 9-6 M-F and 11-5 Sat
Sat is often an organized volunteer day with tasks for all skill levels.

The Lab is located 2-3 miles south of the Bee Line Toll road off Tradeport Road which runs along the west perimeter of Orlando International Airport. Lindy Circle is the first left turn after passing the airport fuel storage facility. We are in the Free Trade Zone Bldg. to your left as you turn onto Lindy Circle.

You can expect to see the actual Phase 3D spacecraft in its' clean room, the full-size functional antenna mockup, payload modules under test and development, the p3d spin balance test fixture and of course the happy smiling lab staff (usually happy). Anyone familiar with previous amateur satellites will be stunned by the size and scope of this effort. For example p3d will have a wing span of aprox. 21 feet, generate 600 watts of solar power and weigh around 1100 pounds at liftoff. Older satellites are spin stabilized which means the hi-gain antennas are pointed at the Earth only during part of an orbit. P3d is the first 3 axis stabilized craft so that the Hi-gain antenna farm is always pointed for maximum coverage except during orbital maneuvering burns of the 400 Newton (aprox 90 lb.) thrust rocket or the 1 tenth Newton (aprox one ounce) thrust ammonia arcjet rocket. Band coverage will extend from 10m to 24 gigahertz. The Japanese SCOPE experiment will down link hi resolution color pictures of the earth.

Currently Ariane is projecting a launch date around April 15th 1997.

Send questions to:

Hi David! Height is not important for satellites. One consideration
might be inteference with locat TV antennas. Go below or above TV
antennas, unless they are at right angles to your satellite Yagis. At
right angles, their gain patterns are small. 73

2237. Recripocal Licence UK/US Question

Newsgroup: rec.radio.amateur.space
Date: 1996-10-28 00:00:00 UTC
From: oneal@pacbell.net
Message-ID: <32740abb.28763615@news.pacbell.net>
Source record: 21112

An off topic question:

Does anyone on this news group know the license agreements between the US and the UK ? I am visiting the UK, want to operate and would like to know what the requirements are.

Anyone also got any hints or tips for taking a HT through customs, other than the old "have a receipt" bit.

Thanks
Steve N6CRR

2239. NORAD Two-Line Orbital Element Sets (TLE890)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-28 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <553e20$jud@blackbird.afit.af.mil>
Source record: 21114

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2240. New 'N' Connectors OK?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-28 00:00:00 UTC
From: Bob Smith <bsmith@msn.com>
Message-ID: <01bbc4e5$8f923820$aaecbdcc@rsmith>
Source record: 21115
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

Are those new N connectors that look like PL259's OK. I have a few and they pretty easy to work with. But then again the standard ones now seem just as easy to use.

Thanks and 73 de Bob.

2241. Re: HOW to QSL Mir (KC5PZQ)

Newsgroup: rec.radio.amateur.space
Date: 1996-10-28 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pPAQn4v.sanderman@delphi.com>
Source record: 21116

Yes this is correct. It has been posted in numerous places as well as in recent AMSAT bulletins.

73 de Stephan Anderman, WA3RKB
Stillwater, NY

2242. What is MO-30?!?

Newsgroup: rec.radio.amateur.space
Date: 1996-10-28 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pNBTPSI.sanderman@delphi.com>
Source record: 21117

In the ARRL Keps posted last Tuesday, 24-Oct (ARLK077), the list included MO-30, which I had not previously seen. Is this the new designation for the new Mexican satellite UNAMSAT-B? I have not seen any information in the AMSAT Bulletins showing the assignment of "OSCAR 30". If this is true, can it be assumed that the "MO" means "Mexican OSCAR"?

Can someone send me applicable frequencies?

Many thanks!

Stephan Anderman, WA3RKB
Stillwater, NY

I am finding that the Amphenol connectors I bought for RG8/9913 the center pin is too small for the center conductor. Usually I drill these out a bit and they work just fine - Question - is this killing any of the required characteristics?

thanks and 73 de Bob.

IT's still working. They are trying some new software last I heard. I also
hear some of the telemetry isn't always accurate. I wish them much luck with
her, I'd like to see the sat around for a long time.

It appears to still be around as i have recieved at least SOME of the telemetry packets from it. Never the whole thing and never on a consistant basis either. Look for it at 145.825 i use PKTMON12 to receive it with my scanner. Hope that helps ya some!

2246. AO-13 Re-Entry

Newsgroup: rec.radio.amateur.space
Date: 1996-10-29 00:00:00 UTC
From: dh1saj@aol.com
Message-ID: <554gjk$50s@newsbf02.news.aol.com>
Source record: 21021

Since a few month I'm carefully watching AO-13 keplerian elements and as well reading all postings about AO-13 re-entry into earth athmosphere.

As I understand the elements so far, Re-Entry date will be somewhat earlier than all predictions by AMSAT etc. (abt 6.Dec 96) saying.

Am I wrong ????
Are there some very new Re-Entry predictions I don't know about ?

As perigee is currently close to 100km, I expect re-entry within the next week.
But as there were no updated keplers since 6 days - has the bird already crashed ????

Unfortunately, I currently have no working HAM equipment at all, so I cannot listen to the beacons and I can't read any PacketRadio informations.

Is there anyone out there who can tell me more ?

73s, Joe

Kees,
A search with Alta Vista gives me (except of the comdom-stuff) :

* SAREX-BBS Archive: Mir SAFEX comms :
http://kpt1.tricon.net/Personal/alan/archive/sarex/Mar96/0020.html
This brings you to : http://www.cybase.co.uk/satcom/
with some info about the MIR.

*SAREX Nachrichten und Archiv.
http://www.tu-muenchen.de/dl0tum/sarex.html
this is an old one and links you to :
http://www.dl0tum.vo.tu-muenchen.de/sarex.html
that gives you some info.

* You'll find some old stuff at :
http://gndstn.sp.nps.navy.mil/wisp/KO-23/msgs/17C85.msg

So the answer is (for the moment) : No.
Maybe, you can make one yourself.
Would be interesting ;-)

AO-13 is still working fine. Reentry prediction date has not changed as
far as I know. The electronic equipment, however, is expected to fail 2 -
3 weeks before actual re-entry. So the time left to use the satellite is
getting very limited. The attitude is still 165, -10. The command stations
have not decided whether to change to 90,0 as had been earlier planned, or
to leave it alone for awhile longer. The keplerian elements from NORAD are
now very much in error, even the latest ones. So you have to expect that
sometimes LOS may come before you expect. And when you hear the beacon
swing your antennas around and peak the signal, as the calculated AZ and
EL may be in error. The beacon is now 145.985 plus or minus Doppler.

2253. Attenuation of trees, leaves???

Newsgroup: rec.radio.amateur.space
Date: 1996-10-29 00:00:00 UTC
From: George La Belle <george_labelle@ccm.hf.intel.com>
Message-ID: <32768BCA.7BA2@ccm.hf.intel.com>
Source record: 21028

I just put up mode B antennas once again (been off satelliting for a coupla years) to practice up in anticipation of PIIID. The antennas face pretty much right into a big maple tree to the east. While this never seemed to pose a problem for mode B, I just realized it may for 1 or 2 GHz operation. Anyone with experience/knowledge in this area? Will the tree attenuate 1 or 2 GHz signals appreciably? (I'm in oregon, where it rains a lot too!) If this is the case, I'm
going to have to plan on putting my antennas on a tower to get them much higher. There are a lot of trees around.

Thanks,
George

xID :
Subject: new Mir frequency

Since November 1 we'll have new frequency on Mir.
xPacket - 145.800
Voice - 145.800 Rx/145.200 Tx.
These frequencies are recommended us by the International amateur
conference in region 1.
We'll open for contacts on new frequency.
73 Mir crew
****
I am not really to happy about them switching as I know there are a
lot of APRS people at 145.79 and when doppler is compensated for there
will be substantial interference. The 145.200 freq is also in use by
various digital packet nodes in the region.. be sure to listen on your
transmit frequency to be sure it is not in use before using.. These
frequencies will definitly help out the european community where
145.55 is a common simplex frequency but I am not sure how it will be
taken here or in the rest of the world. It would seem to me that this
push to change frequencies has been well resisted, but now the moment
has come, and we shall all see how this european frequency change
works..
I would invite your opinions in this forum..

Well, I have no data on how well they work, but I've decided I don't
like 'em. Usually I'm putting Ns on 9913 and with that skimpy spiral
poly dielectric the last thing I want to do is apply heat to solder
the braid.

So I'm back to the old types. Now, the problem with the old type is
sometimes after I put them on the connector is "loose", that is I can
hold the coax in one hand and the connnector in the other and twist,
and the connector moves. Connections like this "seem" to work OK
until the connector falls off, but that usually is only a few hours
later. Sometimes, the connector is on nice and tight and stays that
way. My question is, what is it I did wrong with the ones that are
loose?

Yes, unfortunately a wet tree in the beam of a UHF/SHF antenna is
gonna make a very noticeable difference. On AO-13 mode S, I totally
lost the signal when the sat dipped below the pecan tree that was in
the back yard of my old QTH. When the tree was wet, my uplink on 435
went down appreciably as well when working mode B. Of course the sigs
from AO-13 on 2.4GHz are REAL weak, so you might get a passable sig
thru the tree under better sig (power/offpoint angle) conditions from
PIIID.

Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???" , or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable and listen to this interesting, exciting find!

Let me start by saying that I FINALLY FOUND IT! That's right!. I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams... the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like: 'desperate stupid people who will
try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new CircuitCity Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right
away. I can smell a money scam from a mile away these days...or so i thought. I believed I could sniff out a scam easily. WAS I WRONG!!...I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating: 'GET CASH FAST'!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH IN 4 WEEKS! Well, the more I thought about it, the more I became very curious.
Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe a tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail'for you e-mail fanatics) a single dollar bill to each of the five people on the list that

was contained in the article. I included a small note,
with the dollar, that stated "Please Add Me To Your List."
I then removed the first position name of the five names listed
and moved everyone up one position, and I put my name in position
five of the list. This is how the money starts rolling in!
I then took this revised article now with my name on the list and
REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN
BOARDMESSAGE AREAS THAT I KNEW. I then waited to watch the
money come in...prepared to maybe receive about $1000 to $1500
in cash or so....But what a welcome surprise when those envelopes
kept coming in!!! I knew what they were as soon as I saw the
return addresses from people all over the world--most from the
U.S., but some from Canada, even some from Australia! I tell
you, THAT WAS EXCITING!! So how much did I get in total return?
$1000? $5000? Not even!!! I received a total of $23,343!!!
I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to
this!! Now after almost 8 months, I am ready to do it again!!!
Somaybe it was possible to get $50,000 in cash, I don't know,
but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must
follow through and repost this article everywhere you can think
of!
The more postings you achieve will determine how much cash will
arrive in you rvery own mailbox!! It's just too easy to pass
up!!!

Let's review the reasons why you should do this: The only cost
factors are for the five stamps, 5 envelopes, and the 5 one
dollar
bills that you send out to the listed names by snail mail
(US Postal Service Mail). Then just simply repost the article
(WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you
can.
Then sit back, and enjoy walking (you can run if you like! :o)
down your driveway to your mailbox and scoop up your rewards!!
We all have five dollars to put into such an easy effortless
investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to
$25,000
in about 3-5weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR
TODAY,
EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST
FIVE
DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T
LOSE!!

So how do you do it exactly, you ask? I have carefully provided
the most detailed, yet straightforward instructions on how to
easily
get this underway and get your cash on its way. SO, ARE YOU READY
TO

MAKE SOME CASH!!!?? HERE WE GO!!!*** THE LIST OF NAMES IS AT THE
END
OF THIS ARTICLE. ***OK, Read this carefully. Get a printout of
this
information, if you like, so you can easily refer to it as often
as
needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my
name
to your list". This creates a service out of this money making system
and
thus making it completely legal. You are not just randomly sending a
dollar
to someone, you are paying one dollar for a legitimate service. Make
sure
you include your name and address. I assure you that, again, this is
completely legal! For a neat little twist, also write what slot their
name was in: "You werein slot 3", Just to add a little fun! This is all
about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or
money
orders), and put them into an envelope and send it on its way to the five
people listed. The folding of the paper around the bill will insure its
arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR
MAILBOX. Look at the list of five people; remove the firs tname from
position one and move everyone on the list up slot one on the list.
Position 2 name will now move to the position 1 slot, position 3 will now
become position 2, 4 will be be 3, 5 wil be 4. Now put your name,
address,
zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin
boards' message areas & file section as possible. Give a catchy
description
of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT
IS!,"
or "NEED CASH TO PAY OFF YOUR DEBTS??," etc. And the more uploads, the
more money you will make, and of course, the more money the others on the
list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST
AND
BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!!
You'll reap the benefits, believe me!!! Set a goal for the number of
total
uploads you'll post, such as 15-20 postings or more! Always have a goal
in mind!!! If you can UUE encode the file when uploading, that will make
it easier for the people to receive it and have it downloaded to their

hard
drive. That way they get a copy of the article right on their computer
without hassles of viewing and then saving the article from the File
menu.
Don't alter the file type, leave it as an MS-DOS Text (***.txt) file.
The best test is to be able to view this file using Microsoft's Notepad
for
Windows 3.x or WordPad for Windows '95. If the margins look right without
making the screen slide left or right when at the ends of the sentences,
you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or"POST"
a message on a newsgroup asking how to post a file, tell them who your
Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try
to describe how to do it but there are simply too many internet software
packages with slightly different yet relatively simple ways to post or
upload a file. Just ask for help or look in the help section for
'posting'.
I do know that for GNN, you simply select 'POST' then enter a catchy
description under the subject box, choose 'ATTACH', selecting 'UUE' and
NOT 'TXT', then choose 'Browse' to go look for the file. Find your text
file CASH.TXT and click on it and choose 'OK'. Place a one line
statement
in the main body section of the message post screen. Something like
"Download this to read how to get cash arriving in your mailbox with no
paybacks!," or whatever. Just make sure it represents its true
feasibility,
NOT something like:" Get one million dollars flooding in your mailbox in
two days!" You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE
CASH
IS ON THE WAY!! Expect to see a little money start to trickle in around 2
weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!!
All you have to do is take it out of the mailbox and try not to scream
too
loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something
special
you always wanted or buy that special person in your life (or the one you
want in your life :)) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this
file again; Reposting it in the old places where you originally posted
and
possibly some new places you now know of. Don't ever lose this file,
always
keep a copy at your reach for when you ever need cash. THIS IS AN
INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN
CASH IS NEEDED!

9. (This comment added by Ron Markarian) Hell dude, this is great,
just send the money and wait like 1 week, then all of a sudden, BOOOOOOM!
Mail flood FULL of dollar bills. Hahahaha...its great

I've seen this info on the MIR packet beacon, as well. My question is this: Is 145.200 MHz THEIR transmit frequency (the downlink) or OUR transmit frequency (the uplink)? This aspect of the change is not too clear. Can someone authoritatively clear up this question?

Thanks...

There is a lot of decay discussion on SEESAT-L, the Satellite Observer
Mail List. See below.

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO

SHARE THE WEALTH! Hi there!

Question: would you like to make thousands of dollars,

quick, legally, with NO CATCH? If Yes, then keep reading. Please

take five minutes to read this article. It will change your life, just

like it did mine. If you're not interested, I apologize for wasting your

time.

It's true! You can make up to or over $50,000 dollars in 4-6

weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND

THIS IS NOT A SCAM! Interested? Then here we go.

A little while back, I was browsing through these

newsgroups, just like you are now, and came across an article

similar to this one, which said; "You could make thousands of

dollars in weeks with an initial investment of only $5!" So, I thought,

"Yeah, right, must be a scam!"... ...but like most of us I was

curious. So, I kept reading.

It said you send $1 to each of the 5 names and addresses stated in

the article. You then place your own name and address in the

article at the bottom of the list at #5, and post the article in at least

200 newsgroups (there are thousands). No catch, that was it!

So I thought it over, talked to a couple of people about the

whole thing. I figured what have I got to lose except for 5

stamps and $5? So, I tried it.

Well, guess what...within 7 days, I started getting money in

the mail! I was shocked! I figured it would end soon, and didn't

give it another thought. But the money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 28) and I've made about $42,000 TOTAL, and the money is still coming in.....

Let me tell you how this works and more importantly, WHY it works. Make sure you print a copy of this article NOW, so you can use the information from it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST." Fold each piece of paper in half. Take five $1 bills and place ONE in each piece of paper. Then put each piece of paper in to it's own envelope and seal it. You should now have 5 sealed envelopes , EACH containing a piece of paper AND a $1 bill inside the folded paper. Make sure the words ..."PLEASE PUT ME ON YOUR MAILING LIST." are written on each piece paper. By doing that, you are creating a service and it's PERFECTLY LEGAL.

Finally, mail 1 envelope to 1 of the following 5 addresses:

1. S. Shaw, 611 23rd St., Sacramento, CA 95816
2. G.Charters,5809 Hudson St., Vancouver, B.C. Canada V6M 2Z2
3. D.Miller, 26 Aristone Dr., Berlin, NJ 08009
4. B.Peale, 1619 Nth 5th St., Perkasie, PA 18944
5. D.Watson, 2430 W.Territorial Rd., Battle Creek, MI 49015

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, etc..) and put YOUR NAME as number 5 on the list.

STEP 3: Post your amended article (with you name at #5)
to at least 200 news groups (I think there are close to 18,000 of them). This is easy to do. You can either type out this message (altering any part you deem worthy, EXCEPT the name and addresses) with an ordinary editor or with your web browser's 'To:News' key at the upper left corner of this screen (Netscape Navigator 3.0). After typing this article, save a copy. Any time you want to post this article on a newsgroup, just use a flashy subject and post your saved copy. That's it, easy! Now, post the message to at least 200 DIFFERENT newsgroups. 200 IS THE MINIMUM. The more you post, the more money you will make. You are now in the mail order business and will start receiving your $1 envelopes from various people all over the world within days.
HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may even want to rent a PO Box, eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor." Please be sure to check that all the addresses on the envelopes are correct.

.
LET ME TELL YOU WHY THIS SYSTEM WORKS!!!
Out of every 200 postings, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my #5. Now then, each person who just sent me $1 makes, say only 200 POSTINGS, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; that's $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which

is $5,000 dollars! And finally, 5000 people make 200 postings
each with YOUR NAME AT NUMBER 1. YOU NOW GET A
RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF
THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS
ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the
latest posting that is appearing in the newsgroups, and SEND OUT
ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR
NAME AT 5 AGAIN. And start posting again. The thing to
remember is, do you realize that THOUSANDS OF PEOPLE ALL
OVER THE WORLD ARE JOINING THE INTERNET AND
READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE
RIGHT NOW!!! So can you afford $5 dollars and see if it really
works? I think so....
People have said, "What if the plan is played out and no sends
the money?" So what! What are the chances of that happening
when there are TONS OF NEW HONEST USERS AND NEW
HONEST PEOLE who are joining the Internet and newsgroups
everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, every day, with
THOUSANDS of those joining the actual Internet. Remember, play
FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!!
Honesty is the key, and the best policy. Make sure you print this
article out RIGHT NOW, also, try to keep an eye on the
newsgroups to make sure everyone is playing fairly.
REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD
LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL
REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF
EXTRA CASH!!!
<< By the way, if you try to deceive people by posting the

messages with your name on the list and not sending the money to

the people already on the list, you'd be wasting your time.

I talked to someone who did that and only made $150 dollars, and

that was AFTER seven or eight weeks! He decided to send the 5

$1 bills, and in 4-5 weeks, he had over $10K. >>

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!

GOOD LUCK!

Just picked off of packet, As of Nov. 1st these are the new 2 meter Mir freqs.:

Voice: Downlink: 145.800, Uplink: 145.200
Packet: 145.800 simplex

Just for everyone's info! Not sure if it was posted yet....

73!

145.200 is our uplink
145.800 is our downlink

hope this helps,

2274. Announce: RF version 1.1 available (includes limited license facility for evaluation)

Newsgroup: rec.radio.amateur.space
Date: 1996-11-01 00:00:00 UTC
From: Jon Jenkins <academic@onthenet.com.au>
Message-ID: <55dk9h$n3c@fjholden.OntheNet.com.au>
Source record: 21049
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space

```
If you are not a registered RF user or are not interested in
radio or micorwave circuit design then hit delete now.

This news item announces that a new version of RF (1.1) is available.

The upgrade is available either via ftp:

ftp.onthenet.com.au /pub/academic/

or via WWW ftp:
ftp://ftp.onthenet.com.au/pub/academic

or simply via the WWW
http://www.onthenet.com.au/~academic

The update is free to all existing RF users although you will
have to contact Academic for a new serial number. The encrypt
key to decode the ftp'able zip file pdisk1.zip is the same as
for V1.0.

Also available now to interested parties are time limited
licenses which allow you to use RF's full facilities for a
limited time. Please contact us if you would like to try
RF.

The update is an interim update to add some requested features
and fix some bugs. A major upgrade (1.2) containing many new
features will be available in about four months.

If you have any questions please contact academic@onthenet.com.au

FO-29 as posted in your header, or FO-12 (?) as posted in your message?

If you mean FO-29, maybe someone else here can answer. IF you mean FO-12, I didn't know there was such an animal.

I'm still trying to find out what MO-30 and SICH 1 are, as listed on the ARRL Keps from Tuesday, 10/29.

>Thanks and 73 de Bob.

N connectors are a pain in the ass. I just spent a few hours at 100'
for the K3ANS contest station replacing the female end of an N on
rg213. the female side had splayed out and became intermittent even
though it was nailed down pretty tight. And they are supposed to be
loose...if you can rotate them thats no problem. but they are a drag
to maintain.

2282. new Mir feq's CONFUSION

Newsgroup: rec.radio.amateur.space
Date: 1996-11-03 00:00:00 UTC
From: doslover@juno.COM
Message-ID: <19961103.131559.6871.0.doslover@juno.com>
Source record: 21057

Greetings all..
I would love to get this whole freq debate straight.

I was under the impression that the NEW frequencies for two meters were
the following:
packet 145.800

voice 145.200 UP
145.800 DN (therefore I would hear MIR HERE..)

However, today @ 18:08 (11/3/96) I heard John (KC5PZQ) on the 145.200
frequency handling qso's (which should be OUR up freq) after he was on
the 145.800 frequency (our correct down) telling EVERYONE to change to
145.200 up and 145.800 down.

What is going on? And what will the correct frequency pattern (up / down
) be..

Jason N1RWY

Just talked to John on Mir (KC5TZQ) and there is a great deal of confusion about the transmit recieve combination he wanted all to know
we transmit on 145.800 and we terrestrials recieve on 145.200
please try to get it togeather.. and there will be a lot of fun..
Best Regards Dave N1PPP

Source record: 21059

please get John's callsign right first... KC5TZQ
second he had heard so many people on the wrong freq he switched to
try and convice them to switch to the right freq.. and he ended up
confusing people further I think..
he wants us to transmit on 145.800 and to receive on 145.200 that
means that when you have a +duplex you are looking at 145.200, and
when you key up it switched to `145.800 this is not what was
origionally planned as far as I know, but being of sound mind and body
(ha ha) I programed both into my radio and was ready for whatever the
chef cooked up.. so if you want Mir to hear you transmit on 145.800
(at least for now) as it may change later.. the only thing that is
constant is change.. 73 DAVE N1PPP

I havn't been able to hear/raise the Mir repeater for a few
days now. Does anyone know the status ??

Also, the new voice frequency has only had packet signals ... (?)

Is there a location on the net where I can find up to date
info in Mir happenings ?

Low Cost Access to Space in Education - Update
Ottawa, November 12, 1996

This is a reminder and program update for "Low Cost Access to Space in Education" taking place November 12th in Ottawa.

We would appreciate feedback on whether you plan to attend. Registrations will be accepted at the door, however, before the conference we would like to guage the number of people who will be attending.

Please forward this message on to you colleagues and anyone who may be interested.

Conference lectures include:

Lessons Learned in Low-Cost Access to Space at Stanford University
Prof. Robert Twiggs, Director, Stanford Space Systems Development Laboratory

Lessons Learned in Low-Cost Access to Space in Education
Mark Allery, Surrey Satellite Technologies Ltd, Surrey,U.K.

Low-Cost Microspacecraft Design
Rick Fleeter, Ph.D., President, AeroAstro

Small Payload Opportunities in the CSA Long-term Space Plan
Dr. David Kendall, Program Scientist, Canadian Space Agency

SILA: A Student Microsatellite Project
Prof. D.A. Staley, Department of Mechanical and Aerospace Engineering, Carleton University (tentative)

Using the Unviersity Satellite-Development Model in Industry
Mr. George Tyc, Project Manager, Bristol Aerospace Ltd.

Building Space-Qualified Hardware in Universities
Prof. Gethyn Timothy, Centre for Space Research, Department of Physics, University of New Brunswick (tentative)

SUNSAT: A Microsat Project at the University of Stellenbosch in South Africa
Mr. Sias Mostert, University of Stellenbosch, South Africa

Cost for LCASE registration is $30 (CAN) students and $75 others and includes lunch and coffee breaks. To register, please contact CASI at:

9th Conference on Astronautics - Education Workshop
CASI, 130 Slater Street, Suite 818
Ottawa, Ontario K1P 6E3
Tel: 613-234-0191
Fax: 613-234-9039

More information and an updated program are available on CAISU's web site at http://www.caisu.ca/ or contact the Conference co-organizer, John Criswick by phone at 613-562-2816 or e-mail at criswick@conveyor.com

LCASE is Co-Chaired by:

John Criswick, The Internet Conveyor Ltd. / SPACE JOBS Inc.
Jean-Francois Simard, Defense Research Establishment Ottawa

LCASE is sponsored by:

Canadian Alumni of the International Space University
Canadian Foundation for the International University
Canadian Aeronautics and Space Institute
Canadian Space Agency

2287. Re: new Mir feq's CONFUSION

Newsgroup: rec.radio.amateur.space
Date: 1996-11-03 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RfPw-ht.sanderman@delphi.com>
Source record: 21062

I don't have an answer. But I know a lot of people stateside are upset.

145.20 is in between two common FM repeater outputs - 145.19 and 145.21 (both of which are in use here in the Albany, NY area).

145.80 is but 10 kHz above the frequency commonly used by APRS users in many parts of the country.

Rumor has it that the JSC Amateur Radio Club (W5RRR) is pursuing this problem with the MIR crew, AMSAT, and other interested parties. Apparently, a new set of frequencies will be decided upon in the next few days. Watch the MIR packet beacon for information.

Don't know why AMSAT has this in their file, other than as a source
of telemetry to listen to.

SICH-1 23657 95046A Launch: 31AUG95

FolLows text from NASA SPACEWARN back issue:

1995-046A
SICH 1 is a Ukrainian remote sensing satellite that was launched from
Plesetsk cosmodrome by a Tsiklon-3 rocket at 13:50 UT. The spacecraft and
instruments on board are similar to those of the Soviet Okean series. Its
main mission is to monitor objects of several hundred meters in size, such as
Arctic ice. A second payload, FASAT-ALPHA, which is a Chilean spacecraft of
50 kg mass, could not be separated from SICH 1, and so had to be muted.
Initial orbital parameters were period 98.7 min, apogee 682 km, perigee
651 km, and inclination 82.53 km.

2289. Re: DX and Satellite Cyberscheds available at http://www.sarrio

Newsgroup: rec.radio.amateur.space
Date: 1996-11-03 00:00:00 UTC
From: wb6siv@telis.org
Message-ID: <wb6siv-0311962353010001@host16.cyberg8t.com>
Source record: 21064

Hi Gus, I a few simple questions about your claim that prearranged scheduals are not allowed for a number of awards and contests. How do these arward programs view hams that work a DX station based upon a article in QST that gives feq. date,time and mode of operation? Or, what about the ham that says to a dx station that they just worked on 20 meters, "hay can you drop down to 40 meters so I can get that band confirmed,Or what about the QRP station that initially works a station with a KW and then turns the power to 5 whats and asks the dx station if he can still copy--would that contact still count? Or what about the ham that works a dx station through a dx net control who makes the original contact with both stations and then asks the dx station if he/she can hear w6xxx. I will not even get into the packet cluster issue. So as you can see Gus I am very confused, after all what is the significant difference between the above examples and a cybersched, that would make the cybersched cheating and these other methods of working dx stations to gain points in various contests and reward programs acceptable? Or are you saying all of the above mentioned methods are also disallowed? Just thought I'd ask. 73's Ray

If you believe for even a second that this is a legal practice, go read:

http://www.usps.gov/websites/depart/inspect/chainlet.htm

Participate in this scam and you'll likely have a visit from your local postal inspector, they take this crime pretty serious.. (experience speaking)..

2293. NORAD Two-Line Orbital Element Sets (TLE894)

Newsgroup: rec.radio.amateur.space
Date: 1996-11-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <55luln$hga@blackbird.afit.af.mil>
Source record: 20971

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2294. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-11-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <55lvmu$hi7@blackbird.afit.af.mil>
Source record: 20972

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293

This is not only a stupid choice, it is dangerous. We use 145.790 fo
APRS a packet system for emergancy ops.

Excuse me, 'wide open space' on 222 MHz? Then why did the last 220 SMA meeting feature a hearing due to a denial of freq. coordination to a repeater on Blue Ridge, and why were there 2 freq. coordinators on 222 MHz in So. Cal. for a while? The 222 MHz band may not be used as much as 2 meters, but it's stuffed full of repeaters. There is some room on 6m, but it's awfully noisy.

I'm not sure we can blame Mike for the mess on 446.65. He is only a pawn of SCRRBA, which apparently decided that the frequency shall not have an 'open' repeater on it. The 'warning' transmitter cites references to SCRRBA coordination, but makes no mention of possible coordination of KJ6TQ by other freq. coordination entities, so it is not accurate to say that any other repeater on the freq. is uncoordinated.

Yes, MO-30 is UNAMSAT-B. I hope that XE1TU/WD0E/W3IWI (that's me) can
make
an announcement about its status soon.

The approximate maximum doppler shift should be (according to The Satellite Experimenter's Handbook) +/- 3.76Khz. With today's rigs it shouldn't really be a factor. Happy satellite hunting!

Hello Satellite Enthusiasts !

Here some data about SICH1:

The satellite was launched in August 1995 in Plesetsk by an
Tsiklon 3 launch vehicle. The satellite is operated by the
National Space Agency of Ukraine (NKAU). It was the
first ukrainian satellite so far and it has been built by the
ukrainian company NPO Yuzhnoe.

The satellite is a remote sensing radar satellite which delivers
"on demand" high resolution radar images of pre-programmed
spots of the world. The resolution of the radar images is reported
to be about 200 m when in Hi-Res mode. The images are transmitted
in simple analog APT format in the 137 MHz weather satellite band,
but are only transmitted when in range of Russia / Ukraine.
(Therefore they can only be received in Europe...)

A friend of mine (DL1CF) showed me some received pictures and
they are looking really pretty good......

Well Jason that makes 2 of us! Although Dave (N1PPP) said that 145.200 is
the downlink a day or 2 ago. I heard John yesterday on 145.200 .....
The Mir crew said the opposite a few days before the change was made.....
For now I'll stay with the .200 downlink until this is cleared up .

I have been ablo to get a connected to R0MIR twice now on 145.800 mhz.
I don't use packett much, but shouldn't I than receive a menu like I
do with my local BBS. All I am able to do is connect .

2308. Basic Sat. antennas

Newsgroup: rec.radio.amateur.space
Date: 1996-11-05 00:00:00 UTC
From: Jay Harmor <JayHarmor@sprintmail.com>
Message-ID: <327F6DBF.56B4@sprintmail.com>
Source record: 20983

I have caught the bug. Last night I heard my voice transmission on the 10m downlink of RS10. I was wondering what would be some good basic antenns to work RS10 and RS15. I was using a vert. ground plane for the 2m SSB uplink and a horizontal rotateable dipole for 10m. I currently do not have all-mode capability on 70cm but, antenna sugestions would also be welcome.
I am looking for omni-directional antennas as my first choice.

While I am here would anyone like to try and sked a contact on either RS10 or RS15.

Thanks,

Jay (KEA6GLA)
Sacramento, CA

The antennas you are using sound like the same ones I used to get WAS CW on these satellites (except Hawaii, which I had to use AO-10 and beams to get). They are also fully capable for RS-15 DX work. The only other piece of equipment you may need is a 10-Meter preamplifier, preferrably one that is switchable.

Verticals are good for satellite passes that are less than about 40 degrees. For satellite elevations above 40 degrees, an M2 Eggbeater will do pretty nicely.

From: dj0my@aol.com
Message-ID: <55on7q$af@newsbf02.news.aol.com>
Source record: 20987

Maybe the reason was that someone confused the satellite
names "RS12" and "FO12".....that's the only possibility
since FO12 doesn't carry a 10 metre band transmitter.....

Connect to R0MIR-1. That is the PBBS on the packet system up there.
Connecting to just R0MIR will only get you the welcome message and
that is all. I've done both and the -1 is the hardest to connect to
since only one user is allowed at a time.

2315. RESULTS: New 'N' Connectors OK?

What just about everyone has said is that these new 2 piece connectors are
AOK for use.

At about 6.50 each at HRO - they had better be!

I still find the traditional type easier to use - at least with 9913.

Thanks for all who replied.

Edward, I too have connected several times to MIR and never gotten a
complete response. Generally you usually get just a "busy" response
from MIR or you get connected and then nothing else gets through.
This is because the "connect" packet response is very short and thus
relatively easy to accomplish while subsequent packets are longer, such
as the bbs menu, etc, and never get through since the QRM prevents the
payload from hearing your ACK or MIR never hears YOUR ACK to the
"connected" frame and since the pass is SO short and the QRM is SO high
it generally goes out of range before you ever get another successful
packet through to it. I've watched other connects also as it goes over
and rare is the user who gets any more than you or I have done.

Hmmm. I think an N connector is easier to install than a PL259, all
other things being equal. The trick is to use only Kings connectors and
toss the Amphenols in the trash. A properly installed Kings type N
connector will *not* work loose on it's own.

I leave in Eagle Rock and always used the MARS repeater using high
power mobile rig. Lately I can't even make a call. You people are the
ones who are suppose to go to 222 MHz because those people got their
first. I too got intimimated with that QST, gave a call to one of MARS
people, it's phony. I wouldn't even give a damn to SCARA or whoever in
that Santiago Peak group. Oh well, Mr. Dengler, KE6TZF is Sunset Ridge
Repeater group. You're one of those people jamming. I was wondering
may be you people are getting a lot high power RF's being radiated
right in your head like those guys at 147.435? If you've been using
MARS 446.650, would this mess will make you happy? I should say 73 but
don't which is appropriate this time. May be KJ6TQ would no better...

You must connect to R0MIR-1 to get the the PMS (Personal Message Service) and get the bbs prompt, however it is a single user system so watch for someone to disconnect or timeout , or for a R0MIR>CQ bbs line for an opportunity to connect make sure your equipment it working at its peak and make it as quick as possible as shifting polarity and weak signals tend to cause people to be able to connect and then lose the signal and drop out.. send a message to the cosmonauts and get the message number to send to Dave N6JLH for a qsl card.. good luck.. Radio Meteor Observation Bulletin No. 39 November 1996

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: E.P.Bus
Location: Groningen, The Netherlands (6 33' E, 53 13' N)
Frequency: 72.11 MHz
Transmitter Location:
Breslau, Poland, 130 kW, distance 740 km
Antenna: Yagi, 3 elements, azimuth 106 o (=ESE), elevation 12 o
Receiver: Bearcat UBC 177XLT Scanning Radio, sensitivity: 0.5 microvolt
Observing method: listening

Draconids 1996

Raw counts of reflections during one hour starting at UT:

1996 | UT
| 6h 7 8 9 10 11-11.30
------+-------------------------------------
Sep 22 | 209 172 148 107 114 53

Oct 6 | 170 173 130 105 96 50

Oct 8 | 161 155 172 137 130 66

Oct 12 | - - - - 108 68
Oct 13 | - 138 131 94 - -

The most favourable antenna geometry for detecting Draconids is around 10 h
and 23 h UT.

After correction for sporadic activity and Observability Function (after
Hines) the Draconids showed (weak) activity.
A maximum is monitored on October 8 around 9h UT almost at the point the
Earth passed the node of the orbit of comet 21P/Giacobini-Zinner,
195.398 degrees (2000.0).

Peter Bus / via Ton Schoenmaker

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00

66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

October 1996
Orionids

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Maurice De Meyere

Observer: Werfried Kuneth
Location: near Villach, Austria (13 37' E, 46 45 ' N)
Antenna: 3 element Yagi
Receiver: AR-8000 at 48.25000 MHz, SSB mode
Narrow passband filter, no preamplifier.
Transmitter: 250 kW TV video carrier in Madrid (Spain),
distance 1550 km, southwest.
Observing method: the audio signal is fed into a real time FFT display
(FFTDSP42t program from AF9Y) on the PC where 20 channels of 2 Hz width
are recorded and stored continuously. The sensitivity of each 2 Hz wide
channel is about -171 dBm. Every meteor reflection (in SSB mode)
produces a distinct whistle, which is recorded easily by the real time
FFT program and saved in .GIF pictures of 200 seconds each.
More details see http://www.net4you.co.at/user/kuneth/info.html

The following figures show the total length of the meteor reflections
during one hour, expressed as a percentage. The number here shows
10 times this value. (e.g. 100 means 10 percent).

2. ANNOUNCEMENTS

Leonids: call for observations

Based on radio observations of the previous years, the Leonids maximum is expected on November 17 around 8-10h UT. Due to their high speed, the Leonids are very effective in scattering radio waves, and are more prominent in radio observations than in visual ones. Moreover, the stream might be stronger than the previous years (with a possible storm in 1998 or 1999). This is a morning stream, and radio observers can track its activity until at least local noon (depending on the observer's latitude).

MDM/CSt

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

Imagine that - a lawyer concerned about his reputation! As if they
had any. Give him a break, Imlay - get a life.

Damned lawyers - Typical attitude. I doubt that his livelihood depends on a few crummy dollars a year from the wireheads (ARRL/SBE). He'd be much better off just ignoring a few comments in a newletter with a tiny circulation.

Alas, it is arrogance of that sort that gives the profession a bad name among the public. Pretty unfortunate.

Amen to that! Many hams here in the northeast are very angry about the
two guys who push the rest of us off without so much as a thought.
These guys are the real problem for the rest of us getting into MIR.
I'm willing to bet that at least one off them is running 200 watts and uses
a tracking antenna as well. You would think these clowns would show a little
consideration to others. The worst part of this is that one of these guys
does alot of carping about QRM and interference, and is probably a pretty
knowledgeable person, otherwise.

This is so true. I connected to the keyboard 2 days ago and finally got a quick hello to ack but that's all. You have to act FAST once connected. Of coarse part of the problem is the few folks who think they HAVE to connect on EVERY pass. There's 2 I can think of and they know who they are. I wish some of these people would give us lower power stations a chance.

Mir never used 145.000, it was 145.550.
The new VOICE downlink is 145.200, the uplink is 145.800 and
145.800 simplex for packet.

2338. First Light

Newsgroup: rec.radio.amateur.space
Date: 1996-11-07 00:00:00 UTC
From: Michael Kaminer PR <mkpr@interport.net>
Message-ID: <32825AA1.4887@interport.net>
Source record: 21013

Seven years before THE HOT ZONE became a publishing sensation, Richard Preston turned his attention to the cosmos in FIRST LIGHT: The Search for the Edge of the Universe. Now, we wanted to let you know about a revised edition of what many consider one of the best books ever written on astronomy.

FIRST LIGHT is an intriguing portrait of astronomers at the Palomar Observatory in California and their quest to solve the riddle of the creation of the universe.

The Hale Telescope, aka "the Big Eye," is at the center of Preston's story. But like THE HOT ZONE, FIRST LIGHT is a testament to ordinary men and women engaged in an extraordinary undertaking. Preston imbues their science with humanity -- and strikingly debunks the notion that astronomy is a dry, staid science.

The New York Times Book Review says FIRST LIGHT "beautifully depicts astronomers deepened understanding of earth as the merest speck in time and space. Preston has created a witty and illuminating portrait of scientists in action and a luminous story of what modern astronomy is all about."

For more information about FIRST LIGHT, please e-mail Judd Blaise <news@mkpr.com> or Michael Kaminer <michael@mkpr.com>, Michael Kaminer PR, 212/627-8098; or Amy Cook <acook@randomhouse.com>, Random House, 212/940-7881.

Brian,

You can work MIR on a simple vertical, although it may drop out when MIR is right overhead, but it is not often a problem.

MIR uses a regular FM radio, so you can use that as well. They use an ordinary 1200 baud TNC for packet. Try listening for the beacon.

2345. Conencting to Mir

Newsgroup: rec.radio.amateur.space
Date: 1996-11-08 00:00:00 UTC
From: dhend@cyberportal.net
Message-ID: <3283a3be.2029643@news.monad.net>
Source record: 20925

There is some confusion about connecting to R0MIR.
I would like to try and clear this up..
R0MIR is the keyboard, this crew has not used the keyboard at all, it is the same as your TNC at home if you are there you can talk on your keyboard and if you are not people leave messages in your mailbox usually a X1XXX -1 or -5 this is what Mir has they seldom use the keyboard and messages left there quickly scroll off their screen. The result is that there is little point in connecting to R0MIR except to tell people you were able to, I connect to R0MIR for two reasons,
1. I see they are on the keyboard and are transmitting information packets from R0MIR
2. to see if Mir is hearing me and although I can hear Mir fine sometimes it doesn't hear you well.
Hope you all get a qsl card..

I'll try this again since I didn't see my post posted:

I copied good telemetry from DOVE-17 yesterday! She's back!
Nice to hear from her again!

Congrats to the DOVE team!!!

2351. PTS 160 MHz Synthesizers 4 sale

Newsgroup: rec.radio.amateur.space
Date: 1996-11-09 00:00:00 UTC
From: Wave@mindspring.com
Message-ID: <5626ke$21a@camel0.mindspring.com>
Source record: 20926
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.space,rec.radio.swap,sci.electronics.equipment

I have a copuple of PTS synthesizers for sale. These units are the 160 MHz version. Here are some of the specs:

Frequency range .100 000 MHz to 159.999 999 MHz
Resolution 1 Hz to 100KHz in decades
Accuracy 1 x 10^-8/day +/- 1 x 10^-6/0 - 50 C
Control Local by 10 position dial; remote by ttl level parallel entry BCD or GPIB

Switching time 20 to 5 microseconds
Output level +3 to 13 dBm (metered in dBm and volts)
Flatness +/- 0.5
Impedance 50 ohms
Harmonics -40dBc
Discrete spurs -75dBc

Phase Noise -63 dBc (0.5 Hz to 15 KHz) incl. effects of internal STD
100Hz/105dBc, 1KHz/115dBc, 10KHz/123 dBc,
100KHz/127 dBc
Noise Floor -135 dBc/Hz
External drive 10 MHz or 5 MHz (internal TCXO included)
Weight 35 Lbs
Mounting Rack chassis

I have scanned images of the price sheet and specs/picture sheet. These are available upon request. These units sell new (with all the included options) for over $8000. I am selling them for $500. They all have minor cosmetic scratches but are in full working condition. If interested please e-mail me at:

No you don't need an all mode rig, just an FM rig. Same with packet. Your
set-up should work fine...

I've connected to MIR using using a 5w HT, or a 50w's ft-5100, both on
a Ventanna Atenna. Lot of local people kid me about HOGGING the MIR
mailbox each time it passes. And they're only using verticles to try
to connect but can't... :)

I agree. I have tried for several weeks about a month ago. According
to the keps I had(a week old at worst) MIR was directly overhead and
so therefore figured It was my turn and other 5's as well. But sure
enough there were tons of 3's 2's and some 0's trying left and right.

So, I gave up until I can pump some watts up yonder and make a solid
connect. And yes, I did write down every call that was way north that
gave us down yonder a heck of a time getting on when it was only
logical that 6's 5's and 4's should be given priority access to try a
connect.

I too wish the big guns with multiple arrays and kilowatts would wait
their logical turn and show some courtesy for their fellow operators.

My two cents worth.

Mir is exclusively FM - both for 2 meters and 70 cm. No SSB equipment is
needed.

And you don't need a 20 watt amp to listen to anything. An amp is only
for TRANSMITTING - not receiving.

A preamp (which does work with signals you receive) never hurts though ...

However -- you can EASILY hear Mir on your handheld with a Rubber-duckie.
No need to go with a beam, or anything else. I've done it on many
occasions -- comes in loud and clear.

What's especially nice about using a handheld is you can move your radio
around (experiment!) to try different antenna orientations. Yes, a
rubber-duckie isn't much of an antenna, but it does have a pattern which
is better in certain orientations.

Mir has a linear antenna, but it's rather difficult to know its
orientation, unless you've got a direct contact with the Korolev control
center in Russia! So it's hard to predict which polarization a beam
antenna should use. But with a handheld you can just keep twisting your
wrist until you get the strongest signal.

How do you damage the reputation of a Lawer??????????????????????

The only difference I know between a Lawyer, Politician & a Crook is:

1. A politician is Lawyer, who is usually a Crook, who must be elected
to screw the public...

2. A Lawyer is a Crook who knows how the system is used to screw anyone...

3. A crook is a person who hasn't figured out how to become a lawyer or
politician - YET.....!

2363. Little LEOs

Newsgroup: rec.radio.amateur.space
Date: 1996-11-11 00:00:00 UTC
From: james119@iu.net
Message-ID: <567o6a$q8t@cc.iu.net>
Source record: 20938

The recent discussion by some ARRL correspondence about the proposal to use 144 and 440 Mhz for little LEOs seems to be of the opinion that this is a poor technical idea and should never happen, and should be pooh poohed as such. However, is it any coincidence that all the major manufacturers of VHF/UHF transceivers have quietly started offering DUAL BAND models, 2m and 70cm, 9600 baud packet ready, advertised in QST and other major ham magazines? Does the average ham really need dual band coverage with 9600 baud capability? I have often wondered where the demand is in the ham community for such capability. Could the proponents of little LEOs see these existing products as being readily available for service as LEO terminals? Could the manufacturers have been posturing themselves over the past 2 years for future sales of their transceivers to the open public for use as little LEO terminals? Is it any coincidence that the technical discussions of little LEOs mention AX.25 as a potential protocol? Maybe these guys aren't as stupid as we would like to think. They must be licking their chops about the prospect of selling their existing FM transceivers (repackaged as "LEO terminals") to millions and millions of users. We should indeed be very concerned about this little LEO proposal, and must do whatever it takes to stop it. It may be too late. Unfortunately, we as hams may have been unknowingly subsidizing its development!

Source record: 20939

Hello! I'm working with a small satellite group at the University of Alabama in Huntsville (SEDSAT). With our development going well, we've turned an eye towards developing ground software... and hit a stumbling block.

We would like to use the internet to allow for a client-server based station, with each of our clients individual stations capable of talking with our satelitte and being commanded by a central server. The idea is to spread enough client stations around the globe that the server is constantly recieving data - i.e, lots of stations who handle passes being controled from a central location.

We have recently been told that such remote operation is illegal under current FCC regulations. I'm interested in obtaining a copy of these regs, or in anyone who can tell me if there is a way around them. This seems like such a logical way to merge the internet with the amateur radio community, and it would be rather depresisng to find it shot down by legal issues. Any help/advise would be appreciated.

Thank you,
Chris Bond

Tom,

Don't get me started on lawyers!

Joke:
What do you call 200 lawyers on the sea bed?

A start!

Fun to watch - guys....

Question: DO YOU know how to "look" up his call in QRZ or Sams' an
write him a letter..?

What is the difference between a: lawyer, politician & a crook???

HINT: [NONE!]

De Tom...

Yes, it sure is a quite group... I've tried several tracking programs, and prefer by far LogSat Professional. There's no comparison with the others, like Nova for Windows & STS or Instant Track for DOS. It's very easy to use, but yet extremely powerful, full of options and very customizeable. I think it's well worth the (low!) price.

Matt

ps - Last time I checked their home page (http://www.logsat.com) they had a fully functional demo available for download.

Hello All,
I need a little help with Trackbox. I have built Trakbox and
everything works fine,but I am having trouble getting the mic click to
work. I am using the Yaesu FT-726R And the DSP-2232 , what I need is
detailed info on how to hook up the Trakbox up to use the mic click
with the 726R , I think the 736 is the same mic hook up ?
Thank You 73 Fred KB4QZH

The Center for Industrial Research has an interesting web page describing the Contrawound Toroidal Helical Antenna.

The address is http://www.cira.wvu.edu/cur_proj.html

I have never heard of this type of antenna before. Could it be useful with the OSCARs?

Andrew Skattebo, KA0SNL, in his article "Phase 3D and Me" in Oct 96 CQ-VHF magazine, mentioned a new book on P3D to be available soon.

Has anyone heard of this book and if so, where can one buy a copy?

Thanks!

Orbitrack

One of the best tracking programs out.
For an extra $50 you get a Mac plus to run it on :-)

I forgot who's working on it but there is a Phase 3-D user's guide which
will be published by AMSAT. It should be available by the time Phase 3-D
launches.

You can purchase copies through your local friendly neighborhood Martha.

check the AMSAT WWW page at http://www.amsat.org/ for updates and an
announcement when the book becomes available.

I wouldn't worry too much about it, Dave. Amateur Radio has a large
group of crybabies and moaners who aren't happy unless they are
wailling about something.

If by FO-29 you mean jas-2 then yes, but it doesn't appear to be on very
often. I've managed to catch it once, and all I heard was a computerised
oriental sounding voice anouncing Japanese Amateur Satellite 2.

No one is crying about not connecting due to the constant QRM caused by a select few. I can't speak for the others but I just can't understand why someone would want to waste bandwidth with a joke d'jour or schedulingt school contacts on the air when I am sure the Russian embassy would probably be glad to forward the request through channels with less hassle.
I'm just peeved cause it is taking me a great deal of time to make one succesful connect just so I can get my QSL and move on so that others may have the opportunity.
I can appreciate scheduling school contacts. That is a nice thing to do. BUT there are better ways to do it and without causing QRM. Sarcastic attitudes on both sides of the issue make us all look like children. If someone is complaining about your operating behavior provig their theory that you are inconsiderate with sarcasm and childish retorts does no good.
If the gentleman who is attempting to schedule contacts for schools needs some help i that area, I'd be glad to call the embassy and see what I could do to easy his burden.

All in all folks just use common sense. If you are using tracking software and MIR is over the Northern US and you live in the South, wait till it passes your way. AND VICE VERSE. If you're not using tracking software, you should. Sure it is an effort to get the programs setup and finding keps and then deciffering them. But anything worth doing is worth doing at least halfway right :)

Best of luck to all and 73's

Mir is there, but it is deaf. I connected about 8 or 10 times over the weekend. only to get replys scrambled by the interference from 145.790. I got 2 email's from people asking me why I connect and don't leave a message. I even tryed this morning at 4 somthing AM same result. Maybe if we keep the negative posts coming about the frequency change they will move it up 10k. That would help alot.

I hear the UHF repeater also. I try a contact, I think
someone is attempting to reply, but there is not enough signal
to copy callsigns or QTH's. I'm using a vertical dual band
antenna. I'm located in FM29PE.

In California, it is against the law to threaten to sue.

The concept of having one station talk to another station via satellite by
itself is not illegal. There must be some more information that you didn't
mention that makes your project illegal, so here are a few questions:

What is the purpose for communicating over sats.? Are you trying to provide
access to the internet?

What sort of information will you be sending? Business related data is illegal
in the amatuer bands.

You mentioned "our satellite". Are you refering to an exsisting amatuer sat,
or a commercial sat? What sort of orbit is it in?

In general, if you are attemping to make money by using ham bands, it's
illegal. Even if this is some kind of no money involved type of deal, a
liscensed amatuer must be in control of what goes over the air.
Reading between the lines of your message, it sounds like you are lacking some
basic satellite communication and amatuer radio knowledge.
The rules covering amatuer radio is Part 97 of the Code of Federal
Regulations. You can buy a paperback version at your local ham radio store.
If you post some more specifics as to what your goal is, I can help you
further.

2386. NORAD Two-Line Orbital Element Sets (TLE898)

Newsgroup: rec.radio.amateur.space
Date: 1996-11-12 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <56b03p$ses@blackbird.afit.af.mil>
Source record: 20961

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

Does this mean MIR receives on 145.2, or the ground station
receives on 145.2? This sort of ambiguous wording is what started
all this confusion in the first place!!! The original bulletins
from the SAFEX people in Germany had the same problem...

If you are describing sat frequencies, use the terms UPLINK and
DOWNLINK!!! The only time this could be confusing is if the
satellite is sitting at the bottom of the ocean. :-)

How can I determine if which satellites are still operational? The information at NORAD and NASA Goddard do not comment on the operational status.

ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/sbfft11.zip 1032518 bytes

sbfft11.zip Sound Blaster spectral display and filtering

Features:
* Sound Blaster 16 (or 100% compatible) input and output.
* Band widths of 2K, 4K, 8K or 16K Hz.
* Spectral resolutions of 1 Hz to 16 Hz per pixel.
* Display of power spectral density with any of 4 color maps in either
linear or logarithmic scale.
* Define and use as many as to six filters simultaneously -- band pass,
band stop, low pass, and high pass.
* Filters are defined graphically by mouse movement based upon
the displayed spectrum. Once you see a signal, you can
quickly define a pass or stop filter around the signal by clicking
and dragging the mouse.
* Net filter passband is displayed at all times.
* Filters can be selectively enabled and disabled by a single
keystroke.

Special requirements: DOS 3.0 or higher, SB16 or 100% compatible, SVGA,
VESA modes 101, 105, mouse.

Does anyone know of any active weather satellites operating in the 137 Mhz area (other than NOAA12+14,Meteor3-5) that are able to be monitored in New England? Also, has anyone had any luck with the German program WXSAT.EXE in decoding infrared pictures? I get visible light pictures great, but IR looks like hell. Thanks!

I think it's a combo of the APRS on .790 and other stations trying to get
in. I have YET to get into the PBBS in the past 2 years. I am able to get into
the keyboard fairly easily but it's hard to get a quick message acked back. I
think they DO need to move the freqs.

I originally used DOWNLINK/UPLINK but that confused a person or 2.

OUR UPLINK IS 145.800
OUR DOWNLINK IS 145.200

To those still confused WE LISTEN on 145.200 and TRANSMIT on 145.800

According to the JARL news, JAS-2 digi-talker would be operated
between November 9 and 13. I monitored the frequency a few times, but
I heard nothing. They were offering qsl cards for reports. the
digi-talker was to broadcast in Japanese than English

I haven't had any trouble connecting to the mir mailbox. I have
connected 4 times in the last week , and posted one message. I am
using a RS HTX-202 a 20 watt amp and a 3 el yagi. Trying at night or
early morning may help. also use passe's that are higher in elevation
so that you have more time to work mir. The biggest problem I have had
is that there are usually 3 or 4 stations trying to connect . I watch
my screen and as soon as one operator completes his connection I
start sending. 73 and good luck

FOR SALE. PacComm Narrowband DFM TNC and a PacComm PSK-1 modem.
Bought new from Bob Myers Communications one year ago. Never used.
Paid $547 for them, am selling them for half price - $275 firm.
Cannot answer any technicakl questions about them. Didn't have time to
learn them! Mint condition. In original boxes with manuals, cables
etc. Sorry, no trades. Must sell both. Add shipping and they're
yours. 73 de Robert, KF9ZK
P.S. E-mail only please.

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and has been resurrected
now on the WWW for currency and convenience.

Ham Radio.FAQ contains 3 chapters and many, many links to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or soon-to-be Hams
that you know or share with them the URL to this site:

2408. HELP!!!!! w/ WinOrb & KEPS

Newsgroup: rec.radio.amateur.space
Date: 1996-11-16 00:00:00 UTC
From: seven@datasync.com
Message-ID: <56juud$lf6@osh2.datasync.com>
Source record: 20833

Ok, I am using WWinOrb for a tracker and I have most of the KEP data down. The only questions that remain are:
What is the EPHEMERIS?
What is the 1 DERIV ?
What is the 2 DERIV ?
hat is the BSTAR ?
Is the EPOCH REV: the orbit number ?
Where does the CHECKSUM go if anywhere ?

I have everything else down pat from the obvious tittles in the AMSAT set of KEPS. But these pieces have me befuddled a wee bit. As is I get pretty good tracks. The MIR station comes up within 30 seconds of projected AOS and seems to follow the predicted track. I just wanna have this set perfect So I KNOW FER SURE when she is directly overhead so that when I try a connect I don't knock them guys up north off unless of course she is overhead :) In which case they should wait their turn :)

Peace and Joy in this holiday season!

Source record: 20843

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up schedules to contact hard to find hams all over the world.

How can Cyberscheds help me?

Are you in need of a single state to qualify for the WAS Award? Do you need one more country to qualify for DXCC? Are a county hunter, looking for a few allusive counties? Are you into QRP, and trying to reach a DXCC? Then Cybersched can be a great benefit to your ham radio operations.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

2423. What's up with NOAA-14?

Newsgroup: rec.radio.amateur.space
Date: 1996-11-17 00:00:00 UTC
From: cloud78572@aol.com
Message-ID: <19961117214600.QAA13186@ladder01.news.aol.com>
Source record: 20848

I was receiving NOAA-14 today (11-17-96) at 17:58 utc in the New England area,and the signal sounded a little strange. Instead of the usual ring-ring-ring sound, it was more like buzz-buzz-buzz. When I looked at the visible light picture, it was normal except that it had 30 vertical static bars across it.The IR was the same. Looking at these bars, it would appear that the transmitter was turning on and off 250 times per second while it was sending it's pictures. Is the satellite malfunctioning? It's not my radio,or 60 hz hum.The satellite was working fine yesterday.

reputation, even if the threat to it was from someone who obviously
lacked any understanding about the ethical rules Chris was mentioning.
As for the threat of legal action..."if you don't want to run with the
big dawgs, stay on the porch."

BTW, if you want to "tweak" someone, please do it to someone other than
those trying so hard to defend our favorite radio service from those who
would like to end it.

Sheesh. NASA sources were mentioned, _NOT_ NSA. They sound similar, but do have different missions.

Gee we've made this much more complex than it has to be.

(Of course I could be an operative who was told to say that....)

I have been through quite a few pieces of equipment trying to get QRV on the 9600 baud satellites. I have an Icom 820H and a KC Tracker/tuner. I have an AEA DSP232 but am going to return it to the shop, it is horrible. I HAD a DSP2232, but though it was overkill, so before I got ready for pacsats, I sold it. ANY SUGGESTIONS ON THE TNC to get for this? Im considering the Paccomm NB96, the Kantronics 9612, the AEA PK96.
I want to hear from someone who actually has one running, hi hi.

Have a 820 and Wisp Charlie but using FODtrack as the radio interface as I have no directional antennas - Sorry can't help you with the KC setup.

As for TNC - I have a DSP2232 right now but have used the AEA unit (bad results) and an MFJ 1270C with the MFJ 9600 bd modem - actually have as good of throughput as the DSP2232 or DSP-93 I have had as well. (Secret: PACCOMM actually makes the G3RUH licensed modems for MFJ - so you are getting the real deal.) AEA does some sort of reverse engineering on the signal - guys on this group swear by them but I find for the same money I would rather get the real deal. PLUS the MFJ has a TAPR disconnect header so you can add other modems in the future - the AEA PK-96 units do not.

PACCOMM has all of the same things as the MFJ, but a bit more expensive.

Good luck.

The object is a STAR. An SAO named star. Comets do break apart from time
to time and the pieces generally stay with the main nucleus by the way.
Nothing wierd about this case....

I found a site that seems to cover all of the ones I've heard of. Try
this:

http://www.grove.net/~tkelso/software/satellite/sat-trak.htm

I personally like LogSat v5.1, but it has a few bugs that disturb me. I
REALLY like Nova 1.1, but it crashed too many times on me. Seems to be bug
ridden IMHO. I have InstanTrack v1.0 and really like it, but it's time to
upgrade to a windows program. Check out the site and make up your own
mind!!

Good luck,
tz

Charlie,

I have WISP running on two stations at the moment. One of these stations is using the Icom 820H. The 820 does work fine with WISP, new drivers were released in the last few months specifically for this radio. The radio is controlled off the KCT using TTL inputs, not Icom's CT-17 unit. Works just fine. You do need to mod the 820 to bring out the subband audio, but it is very simple. (I can send you a copy of the mod if needed.)

As for TNC I have used the AEA DSP2232, I currently use 2 of these units, and the AEA DSP232. The 232 I never did get running correctly, the 232 will not receive in the KISS mode at 9600, and is a very flakey unit-pass on it. I have spoken to AEA so many times about this with no luck, at this point I just use the unit for Terrestial packet.

The Kantronics 9612 does work well with WISP, I did use it for a while. My one comment on the 9612 is the RESET procedure is a real pain, you need to remove the cover and short a terminal. If I kept using the unit and external RESET switch would have been installed. I think I needed to adjust the deviation pot on the unit to obtain acceptable deviation with the 820.

In my opinion, the AEA DSP2232 seems to be the best unit to work with. At one point I had WISP fully automated the switching between the 1200 and 9600 baud birds using the AEA DSP2232. Since 2232 is a true dual port unit, I ran the 1200 baud birds on Port 1, and the 9600 baud on Port 2. Worked like a charm!

Feel free to email if you need more info! Good luck and see you on the birds!

2437. NORAD Two-Line Orbital Element Sets (TLE901)

Newsgroup: rec.radio.amateur.space
Date: 1996-11-19 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <56qtk0$rqf@blackbird.afit.af.mil>
Source record: 20862

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Looking for callsign of ham in Guadeloupe (FG5((something)) I) FG5 ? I.
I have heard him several times on RS-10, but have yet to work him.
Can anyone who has worked him send me his address?

Like to get information so I coan contact him for a possible RS-10 Sked.

Any info on how I should go about this?

Try http://www.grove.net/~tkelso this a new location for this page but
most of the software should be there by now, also about the best place
to get the lastest 2 line elements.

Could you explain what this software is used for, thanks!
Sounds like something I have been interested in.

Dear all,

Just wondering if anyone knew of the Goddard ARC rebroadcasts will be on air this time around. I know that it isn't a SAREX mission but that shouldn't affect it should it ??? I monitored the launch live across the internet yesterday but GARC's homepage indicates they have been off air since the last sts-79 mission. When I checked their page the shuttle had been in orbit already the whole evening. Any ideas folks ????

Thanks alot

JB

>
> John N7XLQ

Now I am confused - when you say 145.800 up and 145.200 down, does that mean that we set OUR rigs for 145.800- or do we set it for 145.200+.

Another question: Is it possible to QSO with MIR with 5W on a handheld with a small 2 beam yagi (with ~ 4 dBd gain), or do you need more power? For that matter, is it possible to hear anything from MIR on a handheld connected to a cheap 1/4 wave vertical car antenna, as MIR passes overhead?

Howdy all;

Just spoke with AEA on the phone (Bill) and he told me they are selling off the last of the product lines now and going out of business. The company is up for sale, but no takers out there.

Translated: support for the $1,000 DSP-2232 remains unchanged.

Bob

Charles,

Set your rig for 145.200+. You listen on the downlink frequency, that is, the signal travelling down from space. You transmit on the uplink frequency, that is, your signal travelling up into space.

I have heard of people working Mir on a HT running 5w into a rubber duck. A lot depends on the competition that you have. If you are in an isolated area with few other hams trying to make a contact, your chances are probably pretty good. If you are in a metropolitan area with hundreds of other hams all trying to make a contact, your liklihood diminishes rapidly. Remember that the satellite "footprint", that is, the earth surface area in direct line of sight to the satellite, covers nearly 3200 km in all directions from the earth point where the satellite is directly overhead. However, signals are strongest at the points where it is closest to the earth station. The FM capture effect comes into play a lot here.

So far, I have made 2 packet contacts with Mir using a very modest station - a Radio Shack HTX-202 into a Radio Shack brick 2m amplifier, running about 35w. My antenna is one of those homemade el-cheapo 1/4 wave ground-planes made from an SO-239 connector and 3 pieces of household electrical wire. It's mounted up at about 8 meters above the ground. And I _do_ live in a metropolitan area, about 100 km from NYC!

Good luck chasing Mir!

They air regardless of it's a Sarex mission or not. I haven't tuned in yet
to this mission though. Of coarse they have to have the volunteers available
as well.

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Message-ID: <571u0t$bcf@faatcrl.faa.gov>
Source record: 20872

I'm trying to work ko23 and ko25 sats on 9600 fsk packet. So far all I get is some, but not many messages from ko-23. Repeated tries at connecting have failed. My station setup for this consists of a 5100 Yaesu 50 watts(is this enough?), AES DSP-232, and a Cushcraft 270B. I have a pair of homebrew Lindenblads and a preamp for 70cm I'm going to try tonite for rx only. If this works I'm going to purchase an antenna duplexer and run seperate antennas for rx and tx. Does anyone reading this have any luck with these sats. If so I would like to hear from you. Thanks for reading this.

2449. New Amateur Radio web page

Newsgroup: rec.radio.amateur.space
Date: 1996-11-21 00:00:00 UTC
From: webteck@usa.net
Message-ID: <32949271.713E@usa.net>
Source record: 20874

This is my new Amateur Radio web page...

http://linc2.lincup.com/~tstatham

Please check it out and let me know what you think.
I know it is slow, but is it worth the load time? I
would appreciate any ideas for improvement. I am new to
web page design and this is a learning experience for
me. Thanks in advance.

Tommy

2450. ?Help?? RS-10 and dipole orientation!

Newsgroup: rec.radio.amateur.space
Date: 1996-11-21 00:00:00 UTC
From: baack@maine.edu
Message-ID: <5723qt$bo2@sol.caps.maine.edu>
Source record: 20875

Greetings all.
Just a quick question.
Living on the Coast of Maine I have several "good" passes of RS-10 a
day. The passes are either N to S (morning) or S to N (evenings)
I was wondering if it would be best to have my dipole pointing
E - W ?? (My thinking is that the broad side of the antenna would be facing
north and south. Therefore giving me the best reception)

```
^ (RS-10 heading North)
|
|
********** *********** (dipole)
|
| (path of the satellite)
|
```

Am I correct of do I have it all wrong?

Thanks in advance,
Jason N1RWY FN54kd

Steve, what was needed on your end to work the UHF freqs?

Power? Antenna?
Preamp?
Thanks, Jason N1RWY

2452. Re: KO-23, and KO-25 RX but no TX

Newsgroup: rec.radio.amateur.space
Date: 1996-11-21 00:00:00 UTC

Message-ID: <01bbd7e0$e9f4c7c0$e2edbdcc@rsmith>
Source record: 20877

Your TXcvr Jeff probably doesn't have the frequency refinement to resolve Doppler shift that usually swings 20 kHz or so. That is why you are probably missing most of the pass.

Check out http://www.amsat.org for numerous articles explaining all of this. There are some very good 'getting started' articles.

Jeff Griffin <griffinj@admin.tc.faa.gov> wrote in article <571u0t$bcf@faatcrl.faa.gov>...
I'm trying to work ko23 and ko25 sats on 9600 fsk packet. So far all I get is some, but not many messages from ko-23. Repeated tries at connecting have failed. My station setup for this consists of a 5100 Yaesu 50 watts(is this enough?), AES DSP-232, and a Cushcraft 270B. I have a pair of homebrew Lindenblads and a preamp for 70cm I'm going to try tonite for rx only. If this works I'm going to purchase an antenna duplexer and run seperate antennas for rx and tx. Does anyone reading this have any luck with these sats. If so I would like to hear from you. Thanks for reading this.

73 Jeff (nites, and weekends kb2wqm@juno.com)

: Another question: Is it possible to QSO with MIR with 5W on a handheld
: with a small 2 beam yagi (with ~ 4 dBd gain), or do you need more power?

Should not be a problem. All depends on the pass and doppler and
phase shifts etc. Go for it as it's been done with a hand held and a 1/2
wave from Moscow.

: For that matter, is it possible to hear anything from MIR on a handheld
: connected to a cheap 1/4 wave vertical car antenna, as MIR passes overhead?

Yes. I would walk around at night i.e. 12 midnight and copy passes
on the rubber duck at 4 bars out of 6 on the meter. They have the altitude
and the power and ERP plus a low orbit. Look for them as they come overhead
as well. It's a big ship.

Always wanted to talk to them on my rubber duck but that's pushing
the rainbow to the max ;-P Use the 1/2 wave.....sk

I have a 10 month old SASI SAT Tracker unit for sale. Like new, works just great! Does not use COM port but Parallel port so you do not need a free Comport, and works great with Laptop for Field Day or portable operation. Have all manuals, books, software etc. Interfaces directly with the Yaesu GB5400 Rotator. I am asking $249 shipped to your door. Thank you.

Hi, Jason. You have it right. Theoretically, you will get the best
performance when the antenna is broadside to the signal source. In
practice, however, you find that the "nulls" off the ends of the
dipole are usually very narrow...so if your antenna is anything like
NE-SW or NW-SE, you probably won't notice much of a difference.
Probably not worth moving it at all, if this is the case. I have found
that a 10meter receive preamp helps quite a bit, but you should do OK
with the dipole. 73 es good luck.

You could use it to make difficult signals easier to copy, remove
heterodynes, etc. Like the Watkins-Johnson dsp only cheaper.

Today I received an ARRL e-Newsletter stating that OSCAR 13 is within 2 weeks of re-entry. I remember reading several months ago that this event should be highly visible in the night sky, as it burns up due to atmospheric drag.

Does anybody have any more info on this? I presume that I just use a current set of Keps for AO-13 to calculate passes, and go outside at those times.

I am amused!

Well, OK, I'm really not amused...

Given that AEA is in the process of selling off their residual production to go out of business, I am just amazed at this impressive good deal R&L Electronics is offering... NOT!!

It sure looks to me that they're all too willing to screw a few customers to solve their stock problems...

Wouldn't it have been a little more fair of you to caveat your ad here with the note that they who buy AEA products now do so with little to no possibility of product support, since AEA is about to go belly up? Oh well, bidness is bidness!!!

As always: caveat emptor. I'll remember this ad next time I'm shopping for gear...

Bob

> Preamp?

Yes, you need power and an antenna.

(Sorry, I couldn't resist that :-)

I can tell you what *just* works for me:

25W into a GP-9, no pre-amp.

For it to be really usable, it needs either more power and a pre-amp,
or, directional (tracking) antenna(s).

2475. MO-30

Newsgroup: rec.radio.amateur.space
Date: 1996-11-24 00:00:00 UTC
From: hamdan@ix.netcom.com
Message-ID: <578d1t$ega@dfw-ixnews9.ix.netcom.com>
Source record: 20900

Hello all. I read in the December QST (p.86) that MO-30 is up and running (the article had the uplink and downlink frequencies). However, I looked for it this afternoon (Nov. 23, at about 23:15 UTC) from my QTH in the Denver, Colorado area, and heard absolutely nothing. Does anyone know if it is operational? And also, what name do I give the satellite in my pb.cfg file (I use PB, not WISP)?

Thanks and 73's de Bernie, KF0QS

2476. New beta version of LogSat Professional is available

Newsgroup: rec.radio.amateur.space
Date: 1996-11-24 00:00:00 UTC
From: Roberto Franceschetti <roberto@netwide.net>
Message-ID: <01bbd9f7$6a9acce0$068067ce@miseno.netwide.net>
Source record: 20901

LogSat Software Corporation is currently testing the pre-release of the
next version of LogSat Professional for Windows. This new version will
feature new, highly improved world maps. If you want to participate in our
beta test program, all that is required is that you download the latest
beta version from our page at http://www.logsat.com, and report any errors
you encounter during your regular use of the software to
support@logsat.com. Please be sure to inlcude a description of the problem,
along with any information useful to reproduce the error.
We also welcome any comments/suggestions on possible improvements to the
program. Examples: Do you prefer to superimpose latitude/longitude lines on
the textured maps? Do you suggest using different colors? Etc.

>Are you looking for a TNC (packet modem)?
>If you are looking to build one, there is a Baycom 1200 baud unit
>that's fairly easy to build. (uses baycom SW, of course!)
>Do a file search for tcm3105.zip (schematic & parts list)
>and a directory seach for baycom software at.....
>http://ftpsearch.ntnu.no/ftpsearch
>...a great file search engine!!!!
>
>Best of luck!!
>
>Brian VE7IJQ

All of the stuff Brian describes has nothing to do with a 1200 baud PSK modem. That's 1200 baud AFSK !!!!!

Unfortunately PSK modems are very rare to find here in Europe. The G3RUH FUJI modems are no longer available (as far as I know) but I think there was also a modem design by TAPR.

There are ready made modems available at PACCOM in Tampa, FL. They are called PSK-1. There is also a complete TNC with PSK modem inside called PSK-1T.

KB2BD, John (Space News editor) did also design a PSK modem design. I guess you can send him a mail to "kb2bd@amsat.org" for further informations.

73 from Oscar, DJ0MY

From: dj0my@aol.com
Message-ID: <19961124120000.HAA16721@ladder01.news.aol.com>
Source record: 20903

This message was received by DJ0MY via amateur packet radio:

From: DB2OS @ DB0FD.#NDS.DEU.EU (Peter)
To : AMSAT @ WW

Hi,

AO-13 is still alive as of Nov23 13:35 UTC Orbit #6479..

BUT: The Telemetry sensor for Panel 3 is dead and shows ZERO mA
current since Orbit #6478 which appeared here this morning at
3:06 utc..

Thus it looks like that AO-13 lost one of it's six solar panels.

Also the SERI temperature sensor now jumped to over +80 deg Celsius,
which is a substential increase.

This might be AO-13's last weekend.. ;(

73s Peter DB2OS
P3 Command
AMSAT-DL

2479. AO-13 is dead.....

Newsgroup: rec.radio.amateur.space
Date: 1996-11-24 00:00:00 UTC
From: dj0my@aol.com
Message-ID: <19961124120000.HAA16722@ladder01.news.aol.com>
Source record: 20904

Information received today via packet radio:

As Peter Guelzow, DB2OS, reported today (he is one of the AO13 command stations) AO-13 has died today (AMSAT day 6902, 24. November 1996) arround 05:38:16 UTC (MA 31/32, Orbit #6481).

The last telemetry signals were received in Australia.

AO-13 survived the perigee #6481 at 04:32 UTC in an altitude of about 107 km. But he was only living from one solar panel (panel #5). One day before the solar panel #3 failed (see previous message).

Let's hope that phase 3D will liftoff safe and will deliver such an excelent service to the amateur community as AO13 did in the past.

and to get further out of hand-

there are three differences between lawyers and lab rats:

1) lawyers reproduce faster than rats
2)lawyers will do things that rats refuse to do
3) unlike rats, if you experiment on lawyers, the staff doesnt get
attached to them

Beware! There are several software problems
in the DSP-232. The software to fix them was
in beta and scheduled for shipment around
Thanksgiving. I know, I bought one about a
month ago and was looking forward to receiving
the fix. Damn! They'll be giving these things
away before the end of the year.

2485. balancing tubes: how?

Newsgroup: rec.radio.amateur.space
Date: 1996-11-24 00:00:00 UTC
From: Clifford Buttschardt <cbuttsch@slonet.org>
Message-ID: <Pine.GSO.3.95.961124140256.8063D-100000@oso.slonet.org>

What is the better way of balancing tubes such as 3-500Z units? Is is better to balance the standing current for a given bias (zero bias in the 3-500 units of course) or should the plate current be measured at a give RF drive for each tube? One measures the mu of the tube while the second approach measures the transconductance. Which is more practical for hams?

2487. Need an Article for a Newsletter?????

Newsgroup: rec.radio.amateur.space
Date: 1996-11-24 00:00:00 UTC
From: gerryc@airmail.net
Message-ID: <gerryc-2411961934310001@dal31-15.ppp.iadfw.net>
Source record: 20912
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.packet,rec.radio.amateur.policy,rec.radio.amateur.space,

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. (I have Thanksgiving week off)

73's

i no longer am using my trakbox, so i want to let someone
have it who will use it...

it is in a *very* nice case, the graphics for which you
can grab from tapr, compuserve, or i can email you
a copy of the layout files... the filename is trakbox.zip
if you want to see what the box looks like...

this unit is in mint condx, and really looks professional...

asking price is $350.00

Well I guess I should apologize. I received my new firmware
today. The package was postmarked 12/21 and the software had
a date of 12/6. I installed it and noticed the signal analysis
still seem to have a problem. I'll take what I have (many new
modems) and put up with the minor things. Whew, I thought I
was screwed. Thanks AEA!!!!!! Hopefully they will not go the
way of Lafayette, Heathkit, and the real Radio Shack.

Well I received the update EEPROMS on November 23rd. Hope
that all other received these as well. Have not tried
the updates yets. But the beta versions had solved
many of the problems.

Thanks for the responses. I did manage to hear R0MIR calling CQ at about 3:09AM Sunday morning. I had to turn down the squelch to hear them though since they were kind of faint. I believe that they reach a maximum of only about 24 degrees above the horizon at our location in Hamilton, ON, so they were quite far away. Didn't manage to make contact however.

73, Charles...

And I too just now received an update in the mail. EPROM, not EEPROM. Parts are labeled "AEA V1.0 L31". Level 31? Instructions dated 10/24/96 say "This upgrade enhances your DSP-232;s ability to function in Amtor, Pactor, 9600 bps Packet and 9600 pbs KISS mode."

Just thinking, if AEA can't find a buyer for their intellectual property, it sure would be nice if they'd post the source code to the DSP-232. One of the reasons I purchased a DSP-232 was that it has a very powerfull CPU (MC68340) that can be programmed with free tools (gcc and gdb), and AEA's advertising copy showed a picture of their PCB including the jack for connecting Motorola's Background Debugging Mode. Alas, haven't had time to play with these toys.

Why is it that when you tell a 'joke' about an Irishman it is called
tasteless; when you tell a joke about a black it is called racist, and
when you tell a joke about a lawyer it is called funny?

hmmmm

If you think R & L did something wrong by putting something on sale to
get rid of it, you are probably pissed off at the produce guy in your local
grocery store most of the time too. R & L always had good prices, in my book.
But you go right ahead and get even with them by paying more for something
somewhere else. That will really piss 'em off.....

I had a DSP-232 for about a week. One of the main problems was a birdie at 145.085-145.105. This is right in the middle of the local packet bbs area. With a cable connected to the 232 my ht picked up this birdie from 35 feet away (s9). The case by itself tx's up th 5 feet away. I checked the unit for proper grounding, and found no problem areas. I tryed to use the unit for 9600 sat work and was only able to get a weak signal from KO-23. I took my 232 back to HRO for an exchange, thinking that I must have gotten a defective unit, but the one the shelf did the same thing. On the way to HRO I talked to two people both returned their DSP-232's for a refund. Knowing the state of AEA, (I called late last week for tech help. The recorded message said the company was being 'bought' and any tech problems or servive warrenty work needed, call ARRL in about a month). I was very lucky to get my money back. I now plan on buying a TAPR DSP93 kit.

because a number of high-profile members of the profession diligently slave
to become the ambulance-chaser stereotype that is the root of the gags.

all you gotta do is listen to the radio and tv ads.

one radio station personality locally commented once that for the money the
law firm was paying for the spot, and for the production cost of the spot, the
cost of a professional voice talent would have been peanuts and would
enhance their appearance and remove some of the "used car salesman" image
the founder projects...

Set the standing current (no drive) in each tube to be the
same (adjust bias). Apply drive, and adjust the drive level(s)
to each tube to get the same plate current.

If you are really pedantic, now try halving the drive. If there
is a large difference in plate current, replace the lower reading
tube.

Maybe the jokes aren't funny. But neither is what lawyers are helping to do to our hobby, our country and our world.

People oftn use humor to release frustration and tension. The cost of doing business with and the results of lawyers causes both. No wonder there are so many lawyer jokes.

Perhaps if lawyers had a canon of ethics which kept them from taking frivolous cases, charging exorbanant rates, raping those who win large judgement sums, and taking or making action that hurt groups like amateur radio they would have a some respect from the general public.

Of course, some lawyer will try and justify or nullify the above. That's what they do.

Message-ID: <57g8il$mgt@gate.cyberg8t.com>
Source record: 20784

You don't indicate what software you are using. The microsats cannot be accessed by "connecting" with conventional AX-25 packet protocol. You need a special softwre suite such as PB/PG under DOS or WISP under windows. Check out the AMSAT home page
for more detailed info.

Bob Houghton

2510. MO-30

Newsgroup: rec.radio.amateur.space
Date: 1996-11-27 00:00:00 UTC

Message-ID: <57g8t8$mpl@gate.cyberg8t.com>
Source record: 20785

Can anyone tell me the callsign for MO-30? I have read two articles about
this bird and understand that it uses the same protocols as PacSat
but I have not seen the XXXXXXX-11 and XXXXXXX-12 callsigns for PB/PG.
Nothing on the MO-30 homepage either!

Anybody?

Bob Houghton

2511. NORAD Two-Line Orbital Element Set: Space Shuttle (96331.41666667)

Newsgroup: rec.radio.amateur.space
Date: 1996-11-27 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <57g8a3$5r0@blackbird.afit.af.mil>
Source record: 20786

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Heh, this is a common problem, and not just with the DSP-232.
The PK-232 has it too. The problem is a lack of RF bond between
the case halves. If you sand the paint off the mating surfaces,
and use a screw every 5 cm (as is standard VHF shielding practice),
those harmonics of the reference oscillator stay inside where
they belong, and don't radiate all over the shack.

I hate to post such a general question to the net.
But, I'm geting back into radio after being out of the country for 2 years. Allot has changed computer wise since I've been gone. Especially with windows 95. I'm looking for a tracking software thats not to expensive and if posible runs under windows 95. that might be to much to ask, but any inpute about dos based trackers or windows would be great. I ran instatrack before I left and that worked great but unfortunatly I lost all my disks so I have to buy new software.

thanks for your imput.

At the same time If anyone has a 2meter allmode amp that they want to sell I'm looking for one at the right price

thanks,
Reed

SB SPACE @ ARL $ARLS016
ARLS016 Ham radio on space station

ZCZC AS24
QST de W1AW
Space Bulletin 016 ARLS016
From ARRL Headquarters
Newington, CT November 27, 1996
To all radio amateurs

SB SPACE ARL ARLS016
ARLS016 Ham radio on space station

A foundation has been laid to give Amateur Radio a permanent presence in space. Earlier this month, Amateur Radio delegates from eight countries--Russia, Japan, Germany, Great Britain, Italy, Canada, France and the US--met at the NASA Johnson Space Center in Houston, Texas, to map plans to include a permanent ham radio station aboard the International Space Station, to be tended by station crew members.

From the United States, members of the SAREX Working Group, officials from NASA, US representatives of the Russian Mir Amateur Radio experiment and members from the Johnson Space Center Amateur Radio Club attended the meetings November 4 and 5, chaired by Roy Neal, K6DUE. ARRL Vice President Joel Harrison, W5ZN (ex-WB5IGF), represented the League at the gathering. SAREX Working Group member Rosalie White, WA1STO, of the ARRL Headquarters staff, was among those on hand. The delegates jointly developed a draft memorandum of understanding to promote the development of Amateur Radio on the International Space Station--to be known as ARISS.

The ARISS group will provide for the planning, coordination and performance of Amateur Radio projects on the space station, similar to the way the SAREX Working Group currently coordinates Amateur Radio activities on many space shuttle missions. AMSAT and IARU organizations in each of the eight countries are to review and consider approving the memorandum of understanding. In the US, this includes AMSAT-NA and the ARRL.

The AMSAT-NA Board unanimously approved the memorandum of understanding at its November 11 Board of Directors meeting in Tucson, Arizona. Once the memorandum is finalized, AMSAT-NA President Bill Tynan, W3XO, has been given authority by the board to sign it. AMSAT-NA Vice President for Manned Space Frank Bauer,

KA3HDO, congratulated the international ARISS team for a job well done. ''We look forward to a truly cooperative international venture on the International Space Station,'' he said.

Greetings,

I am planning on building and buying the hardware to interface my Kenwood TS-60s to my computer. I am sure their are others who have already done this and have some opinion on the software available to control the radio once the interfacing has been done. I would like to hear from people who use their radios in this manner and get their feedback on what software they use and what they like or do not like about it. Any recomendations would be appreciated.

Thanks for your time and all reply's will be answered.

Mike, N2QAC.

Greetings,

I am still looking to buy or build a Kenwood IF-10D interface for my TS-60s all-mode transceiver. This interface mounts inside the radio and serves as a buffer between the radios digital board and a level converter such as Kenwood's IF-232C interface. I am building my own level converter from readily available plans, but I have not been able to find any plans or specifications on the IF-10D.

If you have information on this interface, or have an IF-10D you would like to part with, please leave me a private Email message and I will get back to you.

All reply's will be answered.

Thanks for your time.

Mike, N2QAC.

It may as well be a joke. The vote *was* held _many months ago_ and the
proposed newsgroup was defeated.

Cheers,
Jayfar

I may be incorrect, but I don't believe so.

Should you be posting this stuff in the newsgroups you have?
And why have you posted it twice? I understand you wish to get
your point across, but thats a waste of bandwidth.
Perhaps a better choice would be alt.activism, maybe.
I don't agree with white-supremacists, nor would I appreciate
them voicing their racist opinions in un-appropriate areas.
But, they _do_ have the right of free speech, at least in Canada
and the US, among other places, and if they wish to have their own
private area for their thoughts, I must agree with them on that.
As long as no laws are being broken, I don't believe we should
deny them their rights, even if they seek to remove the rights
of others. Free speech is universal. (Or should be.)

But.... thats just my opinion. And you have yours.
(Thanks to free speech, we can both express them.)

Ciao.

Source record: 20811

Hi Maurice-
I couldn't get any pictures at first either, but now I can. I replaced the second IF filter in my scanner with a .01mf capacitor to widen the bandwidth.I record the wav file while in DOS. To get the right recording level, I made some short test recordings of pager signals with the scanner volume set differently for each recording. Play back the recordings, and compare the loudness of each with a standard wav file like "windows\chimes.wav". When you find the volume setting on your scanner that will play back at the same loudness as the standard wav,make a note of it.Thats the volume setting your scanner should be at when you record the satellite pass.When the satellite begins to make it's pass,don't begin to record until the signal is noise-free.Stop when you can't hear the signal anymore.Start the program and go to wav-datie input.Select the wav file.Then go to parameter.If it's a NOAA-12/14 daylight pass hit the "vis" button,make V1=1.25,O1= -.12, make the N-S button read S-N if it's a south to north pass, hit the "lock"button,and then select "ok". Select from Datie "bild start",and sit back and let the computer do the rest. Be prepared for a LONG wait for the picture to start to appear.On my '386 a 10 minute pass takes up to 8 HOURS to totally process. Just let it run overnight if your computer is as slow as mine. If you record a meteor 3-5 pass, the settings I have the best luck with are:Hit the "meteor" button, V1=1.00,O1= -.01,zeilenl.=1196.15,Grd.-Verst.=1.15,don't select "lock". It's a slow program, but it really works. The pictures come out great. Don't forget to save the picture-goto "bitmap""speichen" to save. Good luck!

This sounds suspiciously like the "if this e-mail were AIDS you'd now be infected" chain-letter or the "Good Times!" virus alert, a long-since irrelvant e-mail chain that just will not die. I thought the sturm-und-drang about the nazi music newsgroup came and went months ago.

A check of news.groups shows no action on a "rec.music.white-power" listed in "Current Status of Usenet Newsgroup Proposals" by David C Lawrence <newgroups-request@uunet.uu.net> as of Tuesday, Nov 26 1996.

Furthermore, in a thread called REC.MUSIC.WHITE-POWER on news.groups, I did find the following.

> ["Gary Romalis" chain letter deleted]
>
> That chain letter has been circulating since March 15th. The issue has
> been moot since March 18th, 1996. Please tell the person who sent you this
> message (only; please don't start ANOTHER chain letter to address the last

> model.

I suggest we drop this thread *NOW*, and remind ourselves to be suspicious of anything with four or more levels of ">" quoting in the future.

(apologies for massive cross-post, but it seems appropriate in an effort to squelch this cross-posted, chain-mailed monster)

I see no reason to vote NO as long as they don't crosspost unrelated stuff to my favourite newsgroups, just like YOU do.

Whatever happened to freedom of speech? You can't bar people from having (even lame) opinions. Your mission, should you accept it, is to convince them that they're wrong :). Well good luck, in my case I'd rather ignore them.

Yup - there was a Call For Votes to create rec.music.white-power last March,
and when the voting period ended the proposal was defeated (by a very large
margin, IIRC). The group was not created. Nobody is currently attempting
to create this newsgroup, so voting against it is pointless.

There's been at least one other iteration of this e-mail chain - I got
several messages urging me to vote against the creation of the newsgroup
last July and August (again, well after the proposal was defeated in March.)

It looks like this may be joining "Good Times", Craig Shergold, and the
FCC's modem tax as perennial e-mail pests.

A) Hate speech is not protected in Canada; it's specifically proscribed.
B) A usenet group is not private.

I have a 1.2G module for the FT736R for sale for $450 and I pay the UPS.
I sold the radio and the new owner didn't want 1.2.

I wonder if the family isn't in cahoots on this - Grandparents file
bankruptcy, Homeowner's insurance pays, Everyone profits.
Get a few crapola TV show appearances & a book.
Grandparents now live high on the hog in retirement.
Children inherit estate.

So they say, well, let's at least get something positive out of
the bad situation, eh?

Probably how a lawyer's mind works.

If I had to guess, based on no other information, I would guess that this is a scheme to get around the inheritance tax, which will tax a bequest from the grandparents to the kids or grandkids, at a confiscatory rate of 45% if they have a sizeable estate.

On the other hand, tort damages for physical injury are generally excluded from taxes. Therefore, the unfortunate injury to the daughter may be a vehicle for all concerned to avoid the inheritance tax. (Or it may not be; I'm only guessing).

Sounds like a clever scheme, by a clever lawyer. The kind of lawyer people pay good money for.

And the most basic point: there are no such Constitutional protections
on a non-US government-run telecommunications service.
